In the field of trade negotiations also the tension which had been reached a week or two back, appears to have been relaxed. The British ultimatum to France demanding a revision of the quotas under threat of imposition of new import duties and the French determination to make a bold stand revealed by the retaliatory measures taken by the Doumergue Ministry have brought the position to a standstill. Everything was dependent on the French offer to open friendly negotiations to end this trade war. All eyes were naturally turned to Mr. Runciman to watch expectantly what his next move would be. British public opinion is veering round towards conciliation with France. Mr. Neville Chamberlain explaining the work of the National Government in re-establishing British finances, has expressed his conviction that it is impossible for Great Britain to be prosperous "by holding aloof from developments in the rest of the world." Several of the fundamental problems of the present day are international in character and demand the collaboration of several nations for their solution, among them being lowering of trade barriers. Earlier in the day the association of British Chambers of Commerce have reiterated their faith in bilateral trade agreements.

Mr. Runciman appears to have seized this opportunity and utilised it to the fullest advantage. M. Lamourex, the French Minister of Commerce, is expected at London during the coming week to confer with the President of the Board of Trade as a preliminary to the negotiations for a new commercial treaty between the two countries. Though much official secrecy is maintained as to the probable lines on which the discussions will proceed, it is reported that Britain's latest Note expresses her willingness to negotiate for a fresh treaty on the basis of the present level of trade between England and France. More venturesome reports predict that the new trade agreement, that may be arrived at as a result of the negotiations, will only stabilise and regularise the trade between the two countries without any change in the volume or in variety. The previous treaty that has just been, announced by France to be cancelled was out of date, contained no most-favoured-nation clause and was in other ways considered inadequate. But the Treaty that may be signed now is not expected to contain anything sensational apart from substituting 1934 for 1886.

This, certainly is a hopeful sign and better counsel prevailing in the course of the negotiations, satisfactory agreement should not be far off. Already it is evident from the notes exchanged between the two countries during the week that there is a natural desire to bring the present unsatisfactory relations to an end; and it may be taken that its general tone is also conciliatory. In the House of Commons, Mr. Runciman, announced that he would even prefer to call off the quota-tariff war as a preliminary if necessary and expressed readiness to open negotiations on the basis of the *status quo*.

regulations which form the characteristic feature of the economic position of most of the nations in the Continent of Europe, it is heartening to record a most satisfactory state of affairs in the South-eastern Continent of Australia. The world trade depression, which has still got the major nations in its grip, appears to have relaxed its hold on Australia. Being predominantly an agricultural and pastoral country and depending for its prosperity on its staple industries of wool, meat and food products, the export trade of the Commonwealth has maintained a steady tone; in fact, even a slight improvement is also noticeable.

A comparison of Australian trade figures for the past six months of 1933-34 with those of the corresponding period of 1932-33 will serve to illustrate this upward trend of trade:

MERCHANDISE AND COMMERCIAL GOLD

1933	Exports £	Imports £	Surplus of Exports over Imports £
July	5,688,000	4,399,000	1,289,000
August	5,240,000	5,024,000	216,000
September	8,642,000	4,976,000	3,666,000
October	9,802,000	4,975,000	4,827,000
November	13,092,000	5,538,000	7,558,000
December	11,107,000	4,558,000	6,549,000
Totals ...	53,571,000	29,470,000	24,101,000
Figures for correspond-iyg period of 1932 ...	40,467,000	30,950,000	9,517,000

It will be seen that the exports for the first six months of the current fiscal year, ending June 30 next, are £13,104,000 in excess of those of the corresponding figures for 1932 while the imports are £1,480,000 less, so that the surplus of exports over imports for the current period at £24,101,000 is £14,584,000 greater than as at December 31, 1932. Mr. S. M. Bruce, the Australian Minister in London, in reviewing the trade position, remarked that, if the same trend is maintained during the current six months of the fiscal year, it is quite probable that the trade balance would not be far short of £50,000,000 sterling, *i.e.*, almost double the amount required to meet the services of the overseas debt. This optimism is all the more justified as the current wool prices are now over 100 per cent. above those ruling during the corresponding period last year. It is expected that this year the wool sales alone would realise approximately £45,000,000 sterling as compared with the last season's turnover of only £28,000,000 sterling.

The effect of this export surplus on the debt services is therefore favourable. A substantial amount of funds is now available in London to liquidate external debts of the Commonwealth and States, mainly payable to London and New York, which stand in the neighbourhood of £26,700,000 sterling. The availability of surplus funds, even after meeting this debt repayment may bring to the fore the question of strengthening up the exchange position of the Commonwealth's currency; but as this problem will not arise until after the current fiscal year, it need not be examined at any length now.

This satisfactory trend of affairs has been fully taken advantage of by the Commonwealth Government which by a well-programmed series of conversion operations has brought about a vast reduction in the national debt. In December last, the holders of £16,647,349 5 and 5½ per cent State Loans were offered a 3¾ per cent stock, redeemable in 1946-9. The flat yield on that issue was £3-15-9d. per cent. Earlier in the year, in September a similar issue of £21,000,000 3¾ per cent. Commonwealth Stock 1948-53, was made at 3¾ per cent. to convert or repay the £15,000,000 6 per cent. 1931-41 Commonwealth Stock, the £4,901,233 of N. S. W. 5¾ per cent. stock, and the £1,049,993 of Western Australia 5¾ per cent. stock 1930-40. Still earlier in May 1933 £11,400,000 of 6½ per cent. State Loans 1930-40 were converted into 3½ per cent. Commonwealth Stock 1937-38 and a similar conversion was made in July of 6 per cent. Stocks to 4 per cent.

The final attack on that part of Australia's external debt which bears a high interest and which is optionally redeemable was made a fortnight back. The issue was of £21,636,000 on Cash and Conversion Loan maturing 1954-59 and issued at Rs. 97. The Loans accepted for conversion were the 5 per cent. New South Wales Stock, the 5 per cent. Victoria Stock and the 5½ per cent. Queensland Stock, which is redeemable on or after July 1, on three months' notice.

The annual interest savings as a result of these operations amount to £1,964,362 sterling. The rate of interest has taken the downward trend and has reached the level of 3½ per cent. from 6, 6½ per cent. It is rather difficult to say if the rate will fall still lower in the immediate future. Directly depending on the opportunities for safe investments of funds, the present downward trend is undoubtedly due to a great extent to the trade depression and the abandonment of the gold standard by many nations in Europe.

The most outstanding event during the week in the Commonwealth Government is the Premier's Conference at Canberra which is now in progress. Among the subjects of importance that are considered at the Conference is the question of "secession" of West Australia from the Commonwealth. The referendum in the State has resulted in an unequivocal desire in favour of separation and though the legal and constitutional difficulties, may not permit of an immediate separation, the problem remains a momentous one requiring solution, though not now, at least in the course of the development of the Commonwealth. The popular opinion on

this question serves to illustrate, more than anything else, that the grievances which the state of Western Australia is groaning under require the attention of the Commonwealth Government. While it is not possible to go into the details of the particular circumstances that necessitated the desire for a secession, in the course of this brief article, it looks as if the question arises from a "dilemma inherent in a community of relatively small numbers inhabiting a very large area." The more industrialised and thickly populated Southern and South-eastern States, naturally command greater ascendancy in the Commonwealth's economic and financial affairs, to the detriment of the sparsely populated and undeveloped Western and Northern States. These Southern States have protected their industries with high tariff walls leaving the pastoral states to buy their commodities at prohibitive prices. Important functions of industrial arbitration are now centralised ; and the States complain that the burden and responsibility of the debt service remains on them while a very large and growing proportion of the total taxation is under the control of the Commonwealth.

Admitting the shortcomings of the Western State, it must be at the same time noted that the progress that the nation as a whole has now made, is due in a substantial degree to the federal organisation. It is curious what has been beneficial to the nation till now, has now ceased to be so. What, therefore, appears to be the real grievance is the tendency towards a complete unification and centralisation, and, so long as sufficient safeguards are provided to check this tendency, the separationists can be persuaded to stick to the existing form of government. The signs are not hopeless. The absence of doctrinairism on both the sides and the willingness of the Conference to arrive at a genuine understanding, should go a long way in solving the present discontent.

nary photograph, despite the marvellous progress achieved since Cowper's time, fades and gets blurred and indistinct with time. The two-dimensional representation, as often as not, misses the characteristic expression of the person whose portrait you cherish. All said and done, a photograph is but a tame reminder. It can hardly thrill you; it can hardly speak to you; it seems to lack life, spirit, personality. In so far as Pirim is a portrait on metal it does not fade nor do its features get blurred. In that it shows up the portrait in relief, the strength and force of character revealed in a face is fuly captured in the artists' reproduction. For treasuring the memory of forefathers, which is at once the failing and strength of us, Indians, Pirim is the ideal medium. Which one amongst us of moderate means would not like to own a portrait of the father and mother in imperishable metal and in expressive relief if we can get the portrait at a cost well within Rs. 100? And as modern vogue has spread further and wider, which one amongst us would not like to have the wife, too, in Pirim in the picturesque setting of the sitting room? And which modern wife would not like to have her husband in Pirim if all the cost involved is only three guineas?

* * *

In other words, each middle-class household in India is a potential buyer of four Pirim portraits. If the Pirim people were to start a factory in India, there is an infinite custom awaiting them. It is hardly necessary for me to refer to the other uses of Pirim, such as, panelling, advertising, etc. By a curious coincidence, I have been thrown together with Mr. D. Hayden in intimate contact in the last two or three days. He is one of the most versatile, vigorous and vivid personalities I have come across. He has been in India for a bare month. As an organiser and pioneer of industrial enterprise, he has a hundred per cent. appreciation of the great potentialities of his patent in India. I understand he is leaving Calcutta in a couple of days but I know that he will do so only after definitely concluding the plans for a Pirim plant and organisation in India. Pirim makes mortals immortal. May Pirim Company have an immortal life in the world of joint stock companies!

INDIAN NAVY BILL

Elsewhere is published an important communication from Mr. G. L. Winterbotham on our comments on the Indian Navy (discipline) Bill. While we gladly extend the hospitality of our columns to the valued opinion of so distinguished a businessman as Mr. Winterbotham, we must confess that we remain unrepentant about our attitude to the Bill. We like the light touch, but we are never light-hearted, in our comments. If Mr. Winterbotham will refer to the Legislative Assembly proceedings of 1928, he will find that, precisely for the reasons mentioned in our note which has provoked his criticism, the Bill was rejected in a house composed of such sober-minded legislators as Sir (then Mr.) R. K. Shanmukham Chetty, Mr. M. A. Jinnah, Sir Purshottamdas Thakurdas, Gour and Munshi Ishwar Saran. All these members offered stout opposition. So far as we are aware, the essentials of the measure remain unchanged; and the present Bill is not an improvement either in respect of Indianisation or in regard to the control of the Legislature over the so-called "Indian" Navy.

* * *

It is true, as pointed out by Mr. Winterbotham, that the constitutional position which exists at present is thoroughly unsatisfactory in that the Indian Naval Service Act of 1884 makes it possible for the ships and *personnel* of the Royal Indian Marine to be attached to the Royal Navy at the discretion of the British Government. But two wrongs do not make a right. Because there is an obsolete law which empowers the British Government to commandeer forces, there is no reason for the present legislature to give away, by its own consent, similar powers to the Government.

* * *

The declaration of the Army Secretary that it is "the intention" of the Secretary of State "to consult" the Indian legislature "as far as possible" when the Navy is lent to the Admiralty will not, we are afraid, satisfy even the most moderate of the liberals. People have seen how solemn promises have been variously interpreted and how endeavours have been made to rob pacts and pledges of their spirit. When safeguards devised in British interests are statutory at every point, the benevolent "intentions" of the Secretary of State must be, we urge, translated and embodied in legislation. Have we not had sufficient experiene of the intentions of Whitehall and the India Office? When these declarations are qualified by phrases like "as far as possible," one does not require any knowledge of naval strategy to realise where Indians stand *vis-a-vis* Sir Samuel Hoare who has proved that he can torpedo the entire Irwin Policy.

FROM OUR READERS

To

The Editor,

Indian Finance.

Sir,

Your article on "An Indian Navy" in your issue of 3rd March deals with a subject of such importance to India in so light-hearted a fashion that I venture to put forward the other side of the picture for the information of your readers.

The *personnel* of the Royal Indian Marine at the present moment consists of 128 European and 18 Indian Commissioned and Warrant Officers, and 1000 Indian ratings. In addition to this there are also 11 Indian cadets under training in the United Kingdom for commissions in the Executive and Engineering branches of the Service. Plenty of suitable Indian candidates are available, but they can only be entered when vacancies occur in the cadre and then provided they pass a competitive examination. It is, therefore, quite wrong to say that the Service will be officered entirely by British for decades. It already is not, and Indianising is progressing as fast as is practicable.

The Government of India have made it clear that, when the Indian Navy (Discipline) Act is on the statute book, it is their intention to consult the Indian Legislature as far as possible on the occasions when the Indian Navy is lent to the Admiralty. You take exception to this as not going far enough, but it must be pointed out that the position would be far more satisfactory than the present position of the Indian Marine under the Act of 1884, whereby the Crown, in time of war, may commandeer any vessel of the Marine for service under the Admiralty without the consent of the Government of India. It is surely being unnecessarily suspicious to suggest that the Indian Navy would not, in time of war be primarily employed in the defence of India and the protection of India's trade, but to do this to the best advantage, it might, according to the general strategic situation, become advisable, or even necessary, for some of India's Navy to be employed in adjacent waters such as the Persian Gulf or the Gulf of Aden. Practical considerations render it extremely unlikely that the Indian Navy would ever be required to serve in a sphere of operations distant from Indian shores, and I take it that it is not your intention to suggest that the Indian Legislature would be the right body to determine where, in time of war, the Indian Navy could serve India's interests most usefully.

The taxpayer is already paying for the Indian Marine, and the passing of the Indian Navy Bill will put no new burden on him, while everyone is aware that a Navy is a form of National Life Insurance.

The Royal Indian Marine is India's Navy without the name. Its ships fly the White Ensign of the Royal Navy and of the Navies of the Dominions, and its *personnel* is trained in Naval duties. But both Officers and men feel it very keenly that being only called the "Marine" they are not recognised as a "Navy" but the British Admiralty, the Navies of the Dominions and foreign powers. For India's prestige, it is surely the duty of the Legislative Assembly to put this matter right?

This is the main principle involved for those who are called upon to consider the Indian Navy Bill.

Here is an occasion when it is within India's own power to bestow on its Navy that status which will make it the equal of the other Dominion Navies, and without which it cannot progress.

I am, Sir,
Yours, etc.,
G. L. Winterbotham.

March 12, Bombay.

ELECTRIC CHARGES IN CALCUTTA

To

The Editor,

Indian Finance.

Dear Sir,

As there has appeared in certain sections of the Press recently a series of articles alleging that the Calcutta Electric Supply Corporation has entered into agreements for the supply of electrical energy to Government, Calcutta Corporation and other consumers at rates which show undue preference when compared with those charged to the general public, it is perhaps advisable at this stage to deny any such action on the part of this Company.

It has also been alleged that the Calcutta Electric Supply Corporation have applied to Government for sanction to a new Rate Book which introduces clauses designed to frustrate the aims and objects of the Indian Electricity Act in order to legalise the Company in framing rates which would show undue preference to the ordinary domestic consumers. This allegation is equally unfounded on truth.

Under the Indian Electricity Act, the Company's Rate Book and forms of agreement for supplies of energy require to be submitted to Government for approval before any alterations or modification can be effected therein, and as certain amendments are necessary in order to incorporate the authorised reductions in the Company's rates of supply, the existing Rate Book of 1928 and current forms of agreement were revised and have been submitted to Government for approval, and it should be clearly understood that the alterations therein embody only the amendments authorised by Government during the past 5 years, together with certain additional safeguards suggested by Government for the protection of consumers.

Throughout the past 35 years that the Calcutta Electric Supply Corporation has been supplying the citizens of Calcutta with electricity, it has always been their policy to comply not only with the letter of the law, but also with its spirit, in order to give each individual consumer the lowest possible rates for his class of supply and to show undue preference to none, and this policy has always been and always will be unwaveringly maintained.

Yours faithfully,
F. T. Homan,
Agent.

BANK OF BARODA,

LIMITED.

Under the patronage of and largely supported by the Government of H. H. the Maharaja Gaekwar of Baroda.

(Registered under the Baroda Companies' Act III of 1897).

CAPITAL SUBSCRIBED	...	Rs. 60,00,000
CAPITAL CALLED-UP	...	Rs. 30,00,000
RESERVE FUND now is	...	Rs. 20,75,000

Head Office:—Mandvi, BARODA.

Branches:—Ahmedabad, Bombay, Surat, Navsari, Karjan, Dabhoi, Mehsana, Patan, Petlad, Port Okha, Kalol, Kadi Sidhpur, Bhavnagar, Amreli and Dwarka.

London Agents:—The Eastern Bank, Ltd.

Current Accounts:—Fixed, Short Savings Bank and Savings Bank Deposits received on terms which may be ascertained on application.

Loans, Overdrafts and Cash Credits.

The Bank grants accommodation on terms to be arranged against approved securities.

W. G. GROUNDWATER,
Ag. General Manager.

WORLD TRADE AND INTERNATIONAL ECONOMY

The following extracts from a recent speech of Mr. F. H. Fentener van Vlissingen, President of the International Chamber of Commerce, afford a valuable check to the tendency to exaggerate the fall in world trade and to under-rate its importance in the world economy of the future.

World trade throughout the depression has shown a continuous heavy decline both in the total value and in the quantum of imports and exports. In the first quarter of 1933 (I quote League of Nations figures) the value of world trade was only 35% of its value in 1929, while its quantum at the end of 1932 was 73 to 74 per cent. of the 1929 quantum.

We all know the seriousness of this. It is reflected in idle factories and wide-spread unemployment throughout the world

Now I do seriously suggest to you to use the low figures to which world trade trade has sunk *as a warning.*

But *don't* use it as a *"barometer of despair"*. For you must remember the following points:

1. The first point is this: World trade has decreased—but it has not decreased to such an extent that we need despair. It has not even sunk to anything like the figure popularly supposed. Of course we must look at the volume, not the value. This is an important point. The business machine of the world is not running at full speed, but it is still making and moving great quantities of goods, and feeding, clothing and housing the vast populations of the world.

2. The second point is this: Those who regard foreign trade as a dying industry probably do so simply because they have seen it decline rapidly. They forget that home trade has also suffered severely. It is a regrettable fact that we have no trustworthy figures for comparison, because there is no reliable estimate for total home trade. But that the difference cannot be very alarming from the point of view of international trade is shown by the figures of the League regarding production. In 1932 world production of all non-agricultural products was 73 per cent. of the average for 1925-1929. (The volume of world trade, you will remember, was 73-74%.) World production of all agricultural products was 102% of the 1925-1929 average.

These figures prove that world trade still is, and is always likely to be, a vitally important part of both national and international economy.

Competition of cheap Labour.

There is a process of adaptation going on which is independent of the trade cycle in the traditional meaning of the term. Some countries which, before the war, were primarily markets for American and European goods have now become highly industrialized. We are now buying cheaper industrial goods from countries that used to take industrial goods from us. They are working below our cost of production because their standard of living is much lower than ours, but here again we must not forget that this problem is not new. We have known times when some of the European markets were flooded with very cheap goods made in one of Europe's greatest industrial States; but as that State grew more and more prosperous, this cheaper production was no longer forthcoming. As a result of its increased wealth, its national standard of living rose, it adapted itself to the world level. In the long run I do not think any country, however situated, can permanently undersell the world price.

Changes in World Trade Relations

Naturally such changes are accompanied by a great deal of disturbance of mental habits, of established channels of trade, of familiar ways of earning a living. But this is the point I wish to make, and which, I submit, represents the true position: All this seething commotion means that *we are working towards a new alignment of international trading relations, not towards their abolition.*

Viewing the difficulties of the situation, one man confidently believes that one fine day he will wake up to find that business has picked up and everything is going smoothly again. Then, there is the other man who says that we shall never get out of the present crisis. Well, personally I do not think that either is right. We won't wake up one day to find the good old days have come back, but still I believe the world will readjust itself on the only possible basis which offers real welfare, i.e., on the basis of enlarged production.

Production capacity—Hope not Menace

For in spite of all, that is the one great thing left to us: the enlarged capacity for production which new ways of manufacturing and modern technique have given us. Enlarged production means more goods for everybody. Owing to the crisis, owing to mistakes in policy, owing to faults in existing economic machinery, a great deal of wealth has been destroyed or wasted, but the fact remains that we have always got this greater production capacity, greater than ever before in history. There is something wrong with our distribution machinery. It is illogical, even tragic if you like, to have great stocks of goods and not be able to use them. But mistakes or inadequacies in distribution can be overcome. How infinitely worse, however, how hopeless indeed, would be the situation if this great production capacity did not exist at all!

Suppose I have five cakes which I wish to give to five people. There is one of the five people I cannot reach, I do not know his address or I have no means of getting to him. He will go without his cake, but at any rate the cake is there as and when means of reaching him are discovered. How very different would be the situation if I could easily reach my five people but only had three or even two cakes to offer the lot of them.

What would happen to our ever increasing population if production capacity could not increase too?

We do not properly appreciate the great blessing which modern production capacity really represents. In fact, some people sometimes talk as if to produce goods and foods in large quantities were a kind of sin. Nevertheless, increased production provides the only possibility of increasing the general welfare.

Importance of Stabilization

I stated that in my opinion the burden of the problem lies in the field of the distribution of goods. But we believe that as a first step it is essential for national and international trade to have a solid framework within which to develop, consisting of sound world currency conditions. The first objective to-day must be stabilization.

Why stabilisation? Because there cannot be sound international distribution of goods in the absence of the condition most essential in the buying and selling process.

In the second place, we must not forget that most of the trade barriers that hamper international trade to-day are the direct consequence of unstable currencies, while at the same time the very instability of these currencies make the effect of protective tariffs doubtful.

You will easily come to the conclusion, I think, that greater freedom of international trade, better distribution of goods nationally and internationally, and a really vigorous movement towards solid prosperity are not practicable propositions until you have got stabilization.

"World Trade".

MANAGED CURRENCY

Gold, Sterling & Dollar

[Prof. Gustav Cassel is truly indefatigable in his advocacy of a managed currency. He suspects, with abundant prolification, that behind the cry for the gold standard there is much misunderstanding of its true import. He dispels the illusion that gold as currency calls for less of management than any other medium.]

The general public are inclined to believe that the gold standard guarantees stability in the value of the currency. People have grown so accustomed to regard a certain amount of gold by weight as a fixed unit of value that they find it difficult to conceive that gold itself may vary in value. In point of fact a value is, of course, something quite different from a material substance, being an index of the relative appraisement of different utilities. Just as the value of goods can be stated in terms of gold, so can the value of gold be expressed in the amount of goods it can purchase. If we include a sufficient number of representative goods in our comparison, we can obtain a fairly reliable measure of the value of gold; and we shall then find that this value has long shown very considerable fluctuations, and that in our times these fluctuations have assumed such a violent character and have become so completely incalculable, that the value of gold must be designated as one of the most unstable elements in the world economy.

Under such conditions it is manifestly impossible to recommend a return to a gold standard unless means can be devised for a rational stabilization of the value of gold. But if this aim is to be comprised in monetary policy, the character of the gold standard as a managed currency will evidently be greatly accentuated.

Before the war the problem of stability in the value of gold was never so much to the fore as now.

But the war and the abnormal inflation which ensued in its train led to changes in the value of gold of a more violent character than had ever before been witnessed.

Topical Extracts :

The result was general ruin and an almost complete collapse of the entire gold standard system. Even the most hidebound adherents of old rooted views as to the reliability of the gold standard might have learnt from this radical lesson that an international gold standard system is not maintainable if it is not supported by a monetary policy which deliberately aims at a stabilization of the value of gold.

It is in fact futile to expect that we can get out of the present crisis simply by the formal restoration of gold as a monetary unit. The gold standard must be a rationally managed currency, or else it must disappear. We are faced with a choice between these two alternatives: there is no other.

At present we are living in a state of things in which every country has its independent paper curency. Some few countries are indeed still nominally maintaining a gold parity for their currencies. But this is subject to so many restrictions that it scarcely has any substantial reality. Moreover the value of gold is now so uncertain that the real significance of the gold parity can scarcely be surveyed. Other countries are following different lines in the management of their currencies. In many cases it is by no means clear what these lines are. The competition in the international undervaluation of the curriencies, which has played such a disastrous part in the monetary policy of the last few years, seems to be still continuing and from time to time exhibits new phases, chiefly, of course, of a destructive character.

In the new monetary policy we do, however, discern a positive aim with a constructive tendency, notably in the general desire of the small countries to link their currencies to one of the leading world currencies. In his respect the formation of a sterling block is of special importance. The adherence of the countries belonging to the British Empire to the sterling currency was clearly manifested in the "Empire declaration," which was made immediately after the close of the London Conference. Several other countries, including the Scandinavian, have, at any rate for the present, *de facto* fixed the exchange value of their currencies in a certain ratio to the British pound. This movement would be very promising if only the British pound were a currency managed on perfectly clear and definite lines. An excellent programme for such management was in fact submitted at the London Conference, by the British delegation, and this programme was confirmed by the Empire Declaration. It was to the effect that the internal purchasing power of the pound in terms of goods was to be stabilized after it had been lowered, by the requisite rise in the general level of prices, to a level which could form a basis for a stable equilibrium in the national economy. Hitherto we have not seen any signs of a realization of this programme, and we are scarcely convinced that the programme really has the support of the Bank of England. So long as there is this dualism in the management of the British currency, it cannot be expected that the British pound can assume the position which it should hold as the leading world currency.

The rival of the pound is the dollar. Also the dollar is now to be a managed currency; there is an official programme for its management, involving a rise of the level of prices up to that of 1926, and the subsequent stabilization of that level. But the methods which have been adopted in attempts to promote this programme have not been of such a nature as to inspire the confidence of the world; and therefore the dollar is for the time being a rather isolated currency, which tends to discredit in the eyes of the public the idea of a rational monetary policy.

But, seeing that there are scarcely any fundamental differences in the British and American currency programmes, it should, one would think, be possible to establish a unified Anglo-American currency policy, involving a parallel and approximately equal rise of prices in both countries and a subsequent stabilization of their price levels. This would lead naturally to a stabilization of the rate of exchange between these countries, a stabilization which in course of time could be fixed *de facto* and eventually also *de jure*. In this way there would be created a pound-dollar currency, to which the rest of the world could adhere with assurance, as it would doubtless do well-nigh universally.

There can be no doubt that a world currency managed in this way would in the rapidest and best way solve the problem of the restoration of a stable international monetary system. In America the view seems to prevail that it is impossible, for reasons of prestige, to link the dollar to the pound. But such considerations ought not to stand in the way of co-operation between America and England for the creation of the fixed standard of value for which the world is waiting

In default of such co-operation, a further extension of the sterling block is all that we can hope for. But an indispensable condition for such extension is a firm management of the currency, which, after effecting requisite rise of the general level of prices, will pursue the aim making the British pound a rationally regulated currency with a fixed internal purchasing power in terms of goods.

At present, however, we can scarcely feel assured regarding the prospects of such a development. True that governments and central banks have almost everywhere abandoned the gold standard. But they are still so bound up in the gold mentality that the term "stabilization" is, in most cases, still regarded by them as tantamount to the restoration of a fixed gold parity. It is therefore quite possible that a nominal return to a gold standard will be the final outcome of this perpetual vacillation between different lines of monetary policy. But that gold standard will not be what we previously understood by a gold standard. The right of any person at any time to obtain gold for his money will apparently not be restored, and we shall not recover the security which the gold standard was meant to afford, and which, according to a widely prevalent view, was its chief merit.

It would be still more ill-advised if gold standard were to be restored without any measures being adopted for international co-operation with a view to the maintenance of a reasonable stability in the value of gold. The world might then at any moment once more be exposed to violent changes in that value, followed by disastrous crises. And once more the machinery of official enquiries would be set in motion in order to find all kinds of explanations of these crises—except the real one. Nothing is more certain than that, on the supervention of such a crisis, the gold standard would immediately be abandoned by a large number of countries. If we desire to avoid a repetition of this sorry spectacle, we must, while there is still time, see that the necessity of a deliberately managed currency is generally recognized, and that those who actually determine monetary policy realize that the gold standard does not permit of any exemption from this imperious necessity.

From this there has been placed:—To Depreciation Rs. 72,487-11, to Reserve Rs. 18,255-1-10, total Rs. 90,742-12-10 leaving an available balance of Rs. 1,62,331-12-5, which it is proposed to distribute as follows:—In payment of the Preference Dividend for the half-year ended 31st January, 1934, at the rate of 6 per cent. ptr annum (free of Income tax) Rs. 45,000, in payment of an Ordinary Dividend for the half-year ended 31st January, 1934, at the rate of 10 per cent. per annum (free of Income-tax) Rs. 75,000, total Rs. 1,20,000, leaving a balance of Rs. 42,331-12-5, to be carried forward to next account.

The stock of Jute has been entered at less than cost price and that of Manufacturer Goods at contract rates.

Throughout the period covered by this Report the Mills have continued to work 40 hours per week with 15 per cent. of the looms sealed.—Begg Dunlop & Co., Ld., Managing Agents.

PUTINBAREE TEA ASSN., LD.

Synopsis of Balance Sheet:

LIABILITIES.	Rs.	ASSETS	Rs.
Capital ...	20,000	Block ...	20,000
Debts ...	12,515	Crop A/c. ...	5,819
		Outlay ...	3,382
		Outstandings ...	482
		Cash ...	5
		Profit & Loss ...	2,827
Total ...	32,515	Total ...	32,515

Extracts from Director's Report:

Report—For 1933 discloses a profit of Rs. 11,446-5-5 on the season's working. On transfer of that sum to Profit and Loss Account, and after sundry adjustments, there remains a debit balance of Rs. 2,827-13-1 to be carried forward to 1934.

Crop was restricted in terms of the agreement to that effect among producers and amounter to 1,263 maunds as compared with an original estimate of 1,500 maunds and a yield of 1,475 maunds in 1932.

The average selling price is annas 7 and pies 8 per lb. as against annas 3 and pies 11 per lb. in the previous year, the market having reacted at once to the measures taken, by international agreement, to limit exports from the principal Tea-growing countries.

Planted Area remains unaltered at 281.25 acres.

Estimates for 1934 have been compiled on the assumption that crops will again be regulated and are framed to provide for an output of 1,300 maunds at an outlay of Rs. 39,453 including Inland Freight and Sale Charges —Duncan Brothers & Co., Ld., Managing Agents. Calcutta.

SAMLA COLLIERIES LIMITED

NOTICE

is hereby given that the Twelfth Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 29th day of March, 1934, at 12 noon for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st December, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 23rd to the 29th March, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 14th March, 1934.

Debts	1,12,373	Outlay	2 759
Profit & Loss	1,26,333	Outstandings	38,363
		Cash	2,43,105
Total	11,63,706	Total	11,63,706

Extracts from Directors' Report:

Report—For the Season, 1933.

The Balance of Profit brought forward from 1932 is Rs. 464-11-4, Revenue Profit 1933 Rs. 1,78,802-2-9, interest Rs. 1,747, Share Transfer Fees Rs. 52, total Rs. 1,81,065-14-1, from the above total the Directors have written off for scrap Rs. 515-4-7, Written off Depreciation on Land Rs. 4,875-13, Written off Buildings Rs. 22,000, Written off Machinery Rs. 21,484-11-5, reserved for Income and Super-tax Rs. 5,856-12, leaving a balance of Rs. 1,26,333-5-1, total Rs. 1,81,065-14-1. They now recommend the payment of a First and Final Dividend of 12½ per cent. (free of Income-tax) on the Ordinary Shares for the season 1933 Rs. 75,000, placing to Reserve Account Rs. 25,000, carrying forward to the next Account Rs. 26,333-5-1, total Rs. 1,26,333-5-1.

Labour.—The total labour force on the 31st December, 1933, was 2,848, of which 2,693 were employed on the cultivation, an average of 1.9 labourers per acre.

Outturn.—The yield of tea reached a total of 870,663 lbs. comparing with that of the previous seasons as follows:—1931, 951,404 lb., 1932, 1,058,434 lb., 1933, 870,663 lb.

This is 10,663 lb. more than the quantity estimated for.

Estimates.—The estimated crop for the Season 1934 is 11,000 maunds, or 880,000 lb. at a cost in Assam of Rs. 3,72,595.

The Calcutta expenditure is estimated at Rs. 87,166.—W. F. Scott-Kerr, G. S. Horton, F. M. B. Lutyens, Directors.

TITABUR TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.

Debts	14,617	Suspense A/c.	105
		Outstanding	3,996
		Cash	590
		Profit & Loss	86,029
Total	2,94,717	Total	2,94,717

Extracts from Directors' Report:

Report—For the year ended 31st December, 1933, shows a Profit on Revenue Account of Rs. 30,756-9-4, from this there has been placed:—To Reserve for Taxation Rs. 2,100, to adjustment for Season 1932 Rs. 2.945-11-6, total Rs. 5,045-11-6, balance Rs. 25,710-13-10. *Deduct*—Balance brought forward from last year Rs. 1,11,739-15-4, leaving a balance at debit of Rs. 86,029-1-6 to be carried forward to next account.

Under the Restriction Scheme the Company was allowed to produce 2,945 maunds and the crop made was 2,944 maunds compared with an unrestricted crop of 3,655 maunds in 1932.

The crop was sold on the Calcutta Market and realised an average price of As. 10-5 per pound against As. 7 in 1932.

The Estimate for Season 1934 provides for a Restricted crop of 2,983 maunds to cost Rs. 1,33,105-13.—Begg Dunlop & Co., Ld., Managing Agents.

		Profit & Loss	9,075
Total	2,68,364	Total	2,68,364

Extracts from Directors' Report:

Report—For the year ended 31st December, 1933.

Crop.—The following are comparative statistics of yield for the past three years:—

Year.	Crop.
1933	6,460 Mds. Green leaf
1932	8,320 ,, ,, ,,
1931	8,536 ,, ,, ,,

The produce was again sold to the Doolahat Tea Co., Ld.

Season's Working.—The season's working showed a loss of Rs. 3,539-4-9. Receipts Rs. 58,378-11, expenditure Rs. 61,917,15-9, loss Rs. 3,539-4-9.

Profit and Loss Account.—After adjustment and transferring the above loss, this Account shows a balance at debit of Rs. 9,074-10-1, which is being carried forward.

Estimates.—The following estimated expenditure for the current season of Rs. 57,020 is for a crop of 505,840 lb. green leaf, subject to adjustment on issue of the quotas under the Restriction Schemes.—K. B. Muller, E. L. Watts, B. E. Towlinson, Directors.

MOIRA COLLIERIES, LIMITED

NOTICE

is hereby given that the Twenty-Seventh Half-yearly Ordinary General Meeting of the above-named Company will be held at the Registered Office, No. 12, Mission Row, Calcutta, on Thursday, the 29th day of March, 1934, at 12-20 p.m., for the purpose of receiving and considering the Directors' Report, the Statement of Accounts and Balance Sheet for the half-year ended 31st December, 1933, and to transact any other ordinary business of the Company.

The Share Transfer Books of the Company will be closed from the 23rd to the 29th March, 1934, both days inclusive.

By Order of the Board,
MARTIN & CO.,
Managing Agents.

CALCUTTA,
The 14th March, 1934.
Per Pro M. & Co.

Extracts from Director's Report:

Report—For the year ended 31st December, 1933, shows a Profit on Revenue Account of Rs. 31,790-6, the Balance brought forward from last year was Rs. 4,430-6-9, to this has to be added:—Adjustment for Season 1932 Rs. 224-0-10, equal to Rs. 4,654-7-7, total Rs. 36,444-13-7, from this there has been placed to Reserve for Taxation Rs. 2,133; to Reserve Rs. 10,000 equal to Rs. 12,313, leaving an available balance of Rs. 24,311-13-7, which we recommend should be disposed of as follows:—In payment of a Dividend of 5 per cent. per annum (free of Income-tax) absorbing Rs. 19,500, leaving a balance at credit of Rs. 4,811-13-7 to be carried forward to next account.

Under the scheme for the restriction of Exports and Crop the Company was allowed to produce 1,288 maunds. Owing to unfavourable climatic conditions only 1,245 maunds were produced against an unrestricted crop of 1,371 maunds in 1932.

The crop was sold on the Calcutta Market and realised an average price of Re. 1-0-4 per lb. against As. 9-8 in 1932.

A severe Earthquake occurred on the 15th January, which did extensive damage to the Manager's Bungalow and slight damage to the Factory. In the transfer to Reserve Account provision has been made for repairs to these buildings estimated to cost Rs. 5,000.

The Estimate for Season 1934 provides for a crop of 1,500 maunds to cost Rs. 89,105-7. This is based on our anticipation that we shall be able to purchase Rights to produce in excess of the crop allowed under the Restriction Scheme.—Begg Dunlop & Co., Ld., Managing Agents.

MARGARET'S HOPE TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities		Rs.	Assets		Rs.
Capital	...	3,00,000	Block	...	3,00,000
Reserves	...	93,000	Crop A/c.	...	37,843
Debts	...	14,501	Suspense A/c.	...	110
Profit & Loss	...	18,462	Outstandings	.	3,768
			Cash	...	84,242
Total	...	4,25,963	Total	...	4,25,963

Extracts from Directors' Report:—

Report—For the year ended 31st December, 1933, shows a profit on Revenue Account of Rs. 30,879-3, the Balance brought forward from last year was Rs. 10,436-2-1, from this has to be deducted:—Adjustment for Season 1932, Rs. 2,857-1-1, balance Rs. 7,579-1, total Rs. 38,458-4, from this there has been placed to Reserve for Taxation Rs. 1,996, to Reserve Rs. 18,000, total Rs. 19,996, leaving an available balance of Rs. 18,462-4, which we recommend should be disposed of as follows:—In payment of a Dividend of 5 per cent. per annum (free of Income-tax) absorbing Rs. 15,000, leaving a balance at credit of Rs. 2,462-4, to be carried forward to next account.

Under the Scheme for the Restriction of Exports and Crop the Company was allowed to produce 1,865 maunds. The crop made was 2,013 maunds and by the purchase of Export and Manufacturing Rights the full quantity has been sold. In 1932 an unrestricted crop of 2,156 maunds was produced.

The bulk of the crop has been shipped to London and taking the unsold balance at a valuation the average price is estimated to be As. 14-3 per pound compared with As. 15-5 in 1932.

Unfavourable climatic conditions in the early part of the Season were detrimental to the production of the finest tea; the smaller profit compared with last season is due largely to higher costs of production, consequent upon the operation of the Restriction Scheme.

A severe Earthquake occurred on the 15th January, which did considerable damage to both Bungalows and other buildings. The new Factory was undamaged. It has been estimated that the damage will cost Rs. 8,300 to repair, which expenditure has been included in the amount transferred to Reserve from the year's profits.

The Estimate for Season 1934 provides for a crop of 2,100 maunds to cost Rs. 1,31,533. This is based on our anticipation that we shall be able to purchase Rights to produce in excess of the crop allowed under the Restriction Scheme.—Begg Dunlop & Co., Ld., Managing Agents.

CHARTERED BANK

The local Agent of the Chartered Bank of India, Australia and China has received the following cable from his London Office:—

"At the Annual Meeting of shareholders Directors will recommend a final dividend at the rate of 14 per cent per annum subject to income tax £25,000 added to Pension Fund £206,350-17-7 carried forward."

THE WOLSELEY NINE

The ARISTOCRAT In The 9 H.P. CLASS

This new model, which marks the return of the Wolseley company into the four cylinder field, is not merely a newcomer into an already crowded market. It is a genuine and successful effort on the part of a firm, world-famous as creators of cars of quality, to produce a 9 h.p. car of high performance, fine appearance and absolute reliability. Careful study of its details will show the soundness of its claim to be the real aristocrat of the 9 h.p. class. "Forward mounting" of the engine, and the clever use of the high proportion of body space, has resulted in a car unrivalled in its smart appearance, which accommodates four full-sized adults in perfect comfort. We shall be pleased to forward specifications and arrange demonstrations.

G McKENZIE
and Company (1919) Ltd.

208, Lower Circular Road, Calcutta.

AMLUCKIE TEA CO., LD.

		Cash & Invests,	56,470
		Profit & Loss	1,07,788
Total	7,04,731	Total	7,04,731

Extracts from Directors' Report:—

Refort—For the year ended 31st December, 1933, shows profit on Revenue Account of Rs. 68,515-6-3, to this has to be added Adjustment for Season 1932 Rs. 11,986-15-6. total Rs. 80,502-5-9. From this there has been placed to reserve for Taxation Rs. 5,500, balance Rs. 75,002-5-9. deduct—Balance brought forward from last year Rs. 1,82,790-7-3, leaving a balance at debit of Rs. 1,07,788-1-6, to be carried forward to next account.

Under the scheme for the Restriction of Exports and Crop, the Company was allowed to produce 6,276 maunds.

The actual outturn of tea made was 7,126 maunds, and by the purchase of Manufacturing Rights the whole of this quantity was sold.

The crop was sold on the Calcutta market and realised an average price of As. 8-2 per lb. against As. 5-4 per lb. in 1932.

The Estimate for Season 1934 provides for a restricted crop of 6,358 maunds to cost Rs. 2,23,088-9-9.—Begg Dunlop & Co., Ld., Managing Agents.

ROOPACHERRA TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital	4,00,000	Block	4,00,000
Reserves	1,53,300	Crop A/c.	12,497
Debts	1,47,044	Outlay	6,203
		Suspense A/c.	1,651
		Outstanding	1,544
		Cash	67
		Profit & Loss	2,78,382
Total	7,00,344	Total	7,00,344

Extracts from Directors' Report:

Report—For the year ended 31st December, 1933, shews a loss on Revenue Account of Rs. 1,387-3. The Balance at Debit brought forward from last Account was Rs. 22,76,592-11-11, to this has to be added Adjustment for Season 1932 Rs. 401-12-11, total Rs. 2,76,994-8-10, leaving a Balance at Debit of Rs. 2,78,381-11-10, to be carried forward to next account.

Under the scheme for the Restriction of Exports and Crop, the Company was allowed to produce 2,495 maunds. Owing to unfavourable climatic conditions only 2,244 maunds of tea were made against an unrestricted crop in 1932 of 2,770 maunds.

The short crop produced has made available surplus Export and Manufacturing Rights which were sold.

Whilst the year's disappointing results are due to the very small crop made, the crop allowed under the Restriction Scheme is a very small one due to the "best year" basis of allocation being calculated on the small crops produced since the disastrous floods of 1929. The question has been referred to the Authorities concerned for special consideration.

The crop was sold in Calcutta and realised an average price of As. 8-4 per lb. against As. 5-1 per lb. in 1932.

The estimate for Season 1934 provides for a crop of 2,523 maunds to cost Rs. 1,01,702.—Begg Dunlop & Co., Ld., Managing Agents.

BAGHMARI TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.

WORLD OF INDIAN FINANCE

Calcutta, March 23.

Money has been easier but not too very abundant. Inter-bank call money rate at the close may be quoted 1½ per cent., with business done at lower rates in the earlier days. No pressure for credits has been experienced, but lenders have not had difficulty in placing funds. After carefully apreciating the trends in the money market over the past few weeks, it seems safe to say that transactions connected with Treasury Bills are, in large part, outside the money market proper. The interest of all the Banks put together, excluding the Imperial Bank, may not exceed Rs. 10 crores in Treasury Bills. Of this sum, the major part is contributed by Indian banks and like investment institutions. A remarkable feature in this regard is the more or less entire paucity of foreign funds in Indian bank circles. And in the result, a position has been reached in which neither are short-term funds being repatriated from India on occasions when yield on Treasury Bills becomes too low, nor is there any early likelihood of large-scale influx of foreign money, as the yield on treasuries would continue to be such as to prove unattractive from the point of view of the employment of funds secured in overseas centres. A kind of equilibrium has thus been attained. One may almost say that it is a state of stagnation so far as transfer of funds between India and international centres is concerned. There has, therefore, been no flight of capital of any kind nor any of the complicating repercussions that are usually associated with such capital flight.

The Exchange market has, from this factor, been assured of an entire freedom from unexpected or unforeseeable developments. The dominant influence of the exchange market has been the actual surplus on account of the combined total of merchandise and treasure. The Indian money market has thus become self-contained in a marked degree. The exchange market is also simpler in structure and quicker in response to the main influences.

The gilt-edge market has, likewise, been freed from the play and inter-play of conflicting forces. The governing influence in gilt-edge is a total absence of any cash or conversion loan in connection with the commitments of the next financial year. This means, in simple terms, that the Government would be able to finance all the capital works of the year from their own resources ; and that, in addition, they will be paying out Rs. 13 crores in respect of the 4½ per cent. 1934 Bonds without any recourse to a fresh cash loan or even a conversion operation. While the market will, therefore, not be asked to put up any money for a new loan, it will actually be in receipt of Rs. 13 crores on account of the redemption of the 4½ per cent. loan. A good part of this Rs. 13 crores is bound to find its way back into gilt-edge securities. Besides, insurance companies, investment trusts and other trusts, as well as those individual investors, who would put faith only in gilt-edge, account for an annual accumulation of anything between Rs. 15 crores and Rs. 20 crores, an amount of this description being, so to say, ear-marked for investment in gilt-edge and only gilt-edge. In other words, at least Rs. 10 crores of the Rs. 13 crores realised in respect of 4½ per cent. loan *plus* anything like Rs. 15 crores on account of accumulated investment must perforce find their way into the gilt-edge market. As none of these funds could be invested in any new loan, for the simple reason that there would be no new loan, the owners of these funds will have to enter the open market and buy up securities. There is thus a potential buying power of nearly Rs. 25 crores over the next financial year.

A keener and more widespread appreciation of this fact should, therefore, accentuate the bullish feeling in the gilt-edge market. Without any operations from special quarters, government securities have been making rapid headway. 3½ per cent. Rupee Paper touched Rs. 88-12 in the current week. Once a limit of Rs. 88 was passed—a limit which was exercising, psychologically, a depressing feeling by bringing out sellers in the feeling that the rate of Rs. 88 was high enough—the market in 3½ per cent. Rupee Paper has been livelier and wider. 3½ per cent. Indian Sterling Loan has also been gaining gradual strength in the course of this weeek, the rate, at the time of writing, being £91-5-8. The 3½ per cent. 1947/50

New Loan, which was sticky roundabout Rs. 97/4, has advanced to Rs. 97/11. 4 per cent. 1960—70 has ruled steady at Rs. 103, with scrips difficult to secure. The attention of the market has been diverted to 4 per cent. 1948 Punjab Bonds which are quoting Rs. 102-2. There has been a notable rise in 4 per cent. 1943 Loan which is difficult to obtain at Rs. 103. All securities are now firmly held. Developments are certainly such as to strengthen the hope that, in case the Government decide to take up the conversion of the loans maturing in 1935, they might easily be able to carry through the operation on a 3½ per cent. basis.

Exchange has been very dull, owing to paucity of trade. The current week has been one of the most eventless and lifeless sessions for a long time. The undertone continues good. The near position up to six weeks' ahead is firm, while the forward rates have kept up. There has been no weakening in the forward position. On the weekly sterling tender day, applications for £52.25 million were received at 1s. 6 1/16d. and allotment was made on the basis of 2 per cent. Intermediate sterling bought in the week ended March 17, came to £433,000. The remittance *communique* issued this week shows the transfer of £2,905,000 of gold from Gold Standard Reserve to Paper Currency Reserve. This represents, we suppose, the last instalment of gold in the Indian branch of G. S. R. Against gold thus transferred to P. C. R., *ad hoc* securities for a corresponding amount have been wiped out. There has, therefore, been no expansion of currency against this transfer of gold. So far as G. S. R. is concerned, it lost £2,905,000 of gold in favour of P. C. R., against which transfer has been made from Home Treasury to G. S. R. of a corresponding amount of sterling securities. This is in pursuance of the policy, announced in the last Budget speech of Sir George Schuster, to strengthen the external reserve before the close of the financial year. We have reasons to think that the two further remittance *communiques* which will be issued in the course of March, will show transfers of sterling securities from the Home Treasury to P. C. R. It is quite possible that while *ad hoc* securities will be reduced to a considerable extent against such transfers of sterling securities to P. C. R. there will also be some expansion of currency. There would, perhaps, be just that amount of expansion which would allow of the repayment of the ways and means advance, so that at the end of the financial year the Government will not be indebted to the Imperial Bank.

The closing rates are: 1s. 6 1/16d. for March-April T.T.; 1s. 6 1/32d. for May-June 15, T.T.; 1s. 6d. for June-October T.T.; 1s. 6d. was possible for November T.T. also. Business was done at 1s. 6d. for December T.T.

Bills may be quoted at 1s. 6 5/32d. up to May 10; 1s. 6 1/8d. May-June; 1s. 6 3/32d. monsoon months onwards.

Inter-bank call money changed hands at 1½ per cent. with rates lower in the early part of the week. Money has been in more comfortable supply though there has not been too much about. Firms' money for call, three days' notice and seven days' notice was quoted ¾ per cent. One and two month deposits were quoted 1½ per cent. and three months deposits 1¾ per cent.

Steady to firm conditions have ruled in the share sections both in Bombay and Calcutta stock exchanges. Jute shares have been in great favour, every good scrip meeting with good enquiry. Shares of the Inchcape group have commanded special partiality from operators. India Jute, the ordinary shares of which are Rs. 375 paid up, shot up from Rs. 230 to Rs. 300 and the market is confidently looking forward to further substantial gains in this scrip. Gourepore has also been a lively market on better dividend rumours. Cotton mill shares in Bombay have witnessed lively trading, with improved prices all round. Cement shares continue to be a favourite with investors. Since the announcement in these columns last week of the possibility of a two-year dividend on 7½ per cent. second preference Tata Steel shares, the market has moved from Rs. 115 to Rs. 121½. If this rumour is confirmed, there is scope for a substantial rise even over the present level. In view of the distinctly brighter sentiment in the share market, the Government will do well to relax their tight grip on the money market. There is hardly any justification for persisting in the present deflationary policy of accumulating large balances in the Home Treasury whole in India there is recourse to loans of sundry description. It is difficult to divine the motives of the Government but with the manifestation of an easier feeling in the money market, the reluctance of the Finance Member to expand currency would be further strengthened. It is no argument to say that there is nothing intrinsically wrong in having ways and means advances outstanding at the end of the financial year as in an earlier year as much as Rs. 9 crores were outstanding on March 31. Sterling purchases are being made on a substantial scale. There is every reason to think that purchases will continue on a similar scale in the opening months of the next fiscal year. In view of these possibilities, the accumulation of sterling balances in London and the depletion of rupee balances in India can hardly be justified.

BANKS:

It is a mistake to think of a Bank as an institution which exists merely for the purpose of taking care of depositors' money and paying it out on their instructions. Whilst it is true that this is the primary business of a Bank, it forms only a part of the duties which Lloyds Bank is prepared to perform for its customers. It is not possible in a short space to enumerate the many facilities the Bank offers, but its Branch Managers are prepared to consider, or, if they are not themselves in a position to advise, to obtain expert opinion upon any question affecting their customers' finances, investments, income tax, Trusteeships, Executorships, etc.

	Sterling dollar rate	Sterling franc rate	London price of gold
March 16	5.08 15/16	77.34	136s. 5d.
,, 17	5.09	77.48	136s. 6d.
,, 19	5.10 1/16	77.50	136s. 6d.
,, 20	5.11 7/16	77.56	136s. 2d.
,, 21	5.11	77.46	136s. 0d.

The report that was received at the end of last week that the Reichsbank had lost during the week 45 million marks of gold with a consequent reduction of the gold cover for the note circulation from 9.4 per cent. to only 8 per cent., opens up a vista of new possibilities in international finance. The return of the Reichsbank for the week ended March 7, showed that the gold stock of the Bank amounted to 320 million marks representing a cover of 9.4 per cent. Dr. Schacht is reported to have said that "since 31st December, 1933, the Reichsbank had lost 155 million marks in gold and foreign currencies. On the further reduction in the cover, Dr. Schacht is reported to have said that "at this rate it would be absolutely necessary to restrict imports of raw materials." This statement must be read with the decision of the German authorities made a fortnight ago to reduce the foreign exchange quota permitted to German importers from 50 per cent. to 45 per cent. In interpreting actions like these, one has in these days to consider at first the possibility that the authorities concerned might have intended them as a tactical move in realising certain advantages from foreign nations. In recent German financial history such moves have by no means been rare. And Dr. Schacht himself has a flair for such financial strategy. But at the present moment, after he has driven his hard bargains with the foreign creditors of Germany, it is doubtful if there is any more advantage to secure. The standstill agreement concluded recently between Germany and her foreign creditors is yet to be confirmed, the latter reserving their discretion in this matter till the end of this month.

It would appear that the earlier decision to reduce foreign exchange quota for German importers had caused some flutter in foreign banking circles, because, in the first place, lack of exchange permits from the Reichsbank would mean that the importers in Germany would not be able to continue to place orders abroad. This has its obvious effects on the international exchange of commodities. Apart from this, it was feared that German importers might be driven to the necessity of drawing on the unavailed credits under the Standstill Agreement. London City has, from a long time ahead, regarded such a prospect with a considerable degree of nervousness ; and an agitation has been set afoot for preventing German importers from making use of the unavailments. There is, indeed, no reason why foreign bankers should fight shy of these new credits, as they would not be covered by the restrictions of the Standstill Agreement. There has, of late, been a degree of nervous suspicion at these movements and a growing chasm is being caused between German and foreign finance. Judging from the Air Mail papers, it would appear that at a certain stage there was a real danger of London bankers refusing to confirm the Standstill Agreement and thus escaping the demands of German importers in respect of the unavailments. But later reports indicate a keener appreciation of the dangers of dislocation following the failure to ratify the Standstill Agreement. Dr. Schacht's announcement about the probable necessity of having to restrict imports of raw materials may be said to dispel the fears entertained in London regarding the utilisation of unavailments.

On the basis of the short newspaper cables received here, it is difficult to say what ideas Dr. Schacht entertained in this matter. The restriction of imports and the consequent reduction of Germany's liabilities abroad obviously follow from the threatening position of German finance. But the economic life of Germany cannot be considered solely from the financial standpoint. Unless it be that stocks of raw materials with German industry are sufficiently high for a period, action on the lines indicated by Dr. Schacht would inevitably mean a curtailment of production and exports, which neither Germany nor the nations interested in international trade as a whole can regard with equanimity. If the position of the mark is as the cover of the Reichsbank seems to suggest, then one might say that Dr. Schacht is overdoing the healthy horror of inflation which he naturally developed during those days when he was putting forth his Herculean efforts to salvage the mark and stabilise it. It is up to Germany's financiers and statesmen to consider how long this process of adjusting exports and imports to the requirements of the currency situation can go on.

The silver agitation in the United States of America has reached an intriguing phase. Mr. F. H. Brown pointed out in the course of his evidence to the Recovery Board that speculators in New York held 175 million ounces of silver in readiness to dump on the market if silver was remonetised. On the next day, Mr. Morgenthau is reported to have expressed his opposition to any further change in Government silver policy ; and this led to a decline of 20 points in silver futures accompanied by heavy general liquidation. And what is more important, Mr. Morgenthau announced after a conference with the Coinage Committee of the House of Representatives that he is opposed to the drive in recent weeks for the rehabilitation of silver. His attitude is that the present monetary policy is pulling the country out of the depression and that it should be given a full chance to do its best undisturbed by extraneous additions. Mr. Morgenthau would seem to hold the opinion that silver will not require any further artificial assistance from the United States Government, once the nations have ratified the silver agreement. While such expression of views would have been taken mildly, Mr. Morgenthau has also added that the present agitation is not entirely disinterested and the market would be immediately overwhelmed with hoarded stocks from mines and speculators' strong holds if Government took action as proposed.

Such a statement has naturally put up the resistance of the silver enthusiasts ; and Mr. Rainy, speaker of the House of Representatives declared: "We are going to test silver in the House." Mr. Morgenthau has since explained that his talk of interested agitation was not meant to refer to any of the members of the Congress. But it is significant that the House Coinage Committee has already approved of the two silver bills which are intended to authorise the U. S. Treasury to pay 25 per cent. above the market price for silver shipped to America in payments for exported agricultural commodities, and the purchase of 1,500 million ounces of silver at the market price. The purchases would be 150 million ounces within the first four months after the passage of the Bill and an additional 250 million ounces within a year. The purchases will cease if the commodity prices reach the 1926 average.

The only sign of caution amongst the legislators is the action of the Senate in calling upon Mr. Morgenthau to furnish "a list of silver holders if available and if compatible with public interest in view of the current reports of speculative hoarding of silver." It will be remembered that Mr. Morgenthau has for some time been engaged in the preparation of such a list with a view to assess properly the forces which the Government would have to contend against, in case action on the lines contemplated were taken by the United States Government.

It was only a fortnight back that we suggested that the period of instability in international exchanges appeared to have ended for the time being. Nothing has happened since to alter the practical validity of that statement. The exchanges fluctuated within a range which even for a fortnight is very much less than the daily fluctuations of not a long time ago. Only once did the sterling-franc rate go below the level of 77 and as we now learn, on that occasion the British "Control" acted promptly. Such action was followed by marked and instantaneous effects and sterling has ever since shown a commendable stability. It might be asked whether the interference of the British "Control" in that instance does not raise important questions as to the policy which the British authorities have in their mind. We have referred on previous occasions to the differences of opinion between the Treasury and the Bank of England in matters concerning exchange, as also to the fact that, while the Treasury would not regard with disfavour the prospect of a decline in the gold value of sterling, the Bank of England was anxious to avoid such a contingency in consideration of the adverse effects of such decline on the gold currencies. On this occasion, it would appear the Bank has acted in exercise of its normal powers without waiting for any express direction from the Treasury. And the fact, that since then sterling has been strong against the franc has spared the country the embarrasment of any acute difference of opinion between the Bank of England and the Treasury Nevertheless, the question remains whether the British authorities regard the present position as all that it is desirable from their standpoint, and whether there is not room for effective action in any direction. A tentative answer may be suggested by the general British attitude of not going out to meet the devil. For the present they would be content to utilise the resources of the Fund for smoothening out the fluctuations caused by speculative movements.

But in the background there is looming large the question whether Mr. Roosevelt may not decide to have a further depreciation of the dollar. For some time rumours have been persistent in the London market that such policies were being seriously considered on the other side of the Atlantic. And though the market's faith in such possibilities were found to fluctuate, there is little or no disposition to regard them as having no basis in fact. It is surprising that no hint of such inclinations on the part of the American Government has been conveyed in the press reports received in India. And the report that the wholesale price in February increased by 2 per cent. over the January figure reaching 73.6 per cent. which is the highest figure for 3 years, together with Mr. Morgenthau's assertion that the present policy is pulling the country out of the depression, suggests that there is objectively less need for going further on the path of currency depreciation. If we credit London city circles with some instinct, if not insight, in matters of this kind, it would be necessary to examine the question on its merits. Considering that the range of depreciation permissible under the existing law is only 9.4 cents it is just possible that Mr. Roosevelt would attempt to secure wider powers from Congress before proceeding to act. For it is obvious that, if the dollar were brought down to the minimum under the existing law, then it would amount to Mr. Roosevelt disarming himself thoroughly in the contests with foreign powers that are awaiting him. While there can be no doubt that Mr. Roosevelt still weilds sufficient influence to persuade Congress to do his bidding, it still seems that it is unlikely he will ask for powers to reduce the dollar to a level lower than 50 cents. It may be said, therefore, that any talk of further depreciation in the dollar is meant to be a bargaining point with Great Britain and the gold standard countries.

COMMUNIQUES AND RETURNS

TREASURY BILLS.

The Controller of the Currency ratifies that tenders for Rs. 1½ crores of three months Treasury Bills were opened on Tuesday, March 20. The total amount offered was Rs. 1,91,25,000. Tenders at Rs. 99-7-9 and above were accepted in full and those at Rs. 99-7-6 were allotted approximately 82 per cent. Lower tenders were rejected. The total amount accepted was Rs. 1½ crores, the average rate of accepted tenders being Rs. 2-2-0 per annum.

Tenders for Rs. 1½ crores of three months' Treasury Bills will be received on Wednesday, March 28. Successful tenders should make payment on Thursday, March 29. Other conditions are as usual.

Three month's intermediates will be sold from March 21 to 27 at Rs. 99-7-9 subject to the conditions previously announced.

Three month's intermediates sold from March 14 to 19 amounted to Rs. 2,54,75,000.

STERLING TENDERS

The Controller of the Currency notifies that on Tuesday, March 20 tenders to the amount of £ 52,250,000 at 1s. 6 1/16d. were received and allotted approximately 2 per cent.

On Wednesday, March 28 £ 1,000,000 will be offered for tenders on the same conditions as previously announced.

25 YEARS TEST

REVEALS THE BEST

Service: For over 25 years "The Indian Mercantile" has served the Indian Public with complete satisfaction.

"Dependable" is no exaggerated description of this indigenous concern which has at the time Assets exceeding three times its paid-up capital and has paid, with rare exceptions, handsome Dividends since its inception.

Life policies issued by this Company are scientific, up-to-date and designed to meet individual requirements at competitive rates of premium.

Agency Terms are unique and treatment sympathetic.

THE INDIAN MERCANTILE INSURANCE CO., LTD.,

11, Bank Street, Fort, Bombay.

MARKET REPORTS

CALCUTTA STOCK EXCHANGE

(From Our Correspondent)

Calcutta, March, 15.

Most of the Sections in the Stock Exchange have undergone a definite improvement during the period under review. Government Securities, following easier money conditions ruled very firm and buyers predominated. Although there was not much activities in the commodity markets, Jute Mills' shares remained very steady and a fairly large business was reported. Cottons shew no material change while Coals have rather brighter appearance and improved demand was in evidence for certain selected stocks. There were many good features in the Miscellaneous Industrials, but pride of place must be given to Engineering concerns' shares which showed an all round further appreciation. Teas also kept steady.

Government Securities.—A strong market for Government Securities was witnessed during the week under review following easier money conditions and owing to the prospects of surplus Budget in Great Britain. 3½ per cent. Government Paper opened firm at Rs. 87/10 on Monday and as the session progressed more buying power developed and the rate advanced to Rs. 88/12. 3½ per cent. Loan (1947/50) also kept very firm round about Rs. 97/12, 4 per cent. Loan (1960/70) advanced to Rs. 103/- and 4½ per cent. (1955/60) to Rs. 108/-. Provincial Loans also were fairly well-supported. Towards the close 3½ per cent. Government Paper eased off slightly to Rs. 88/7.

The Bank rate remained unchanged at 3½ per cent.

Fixed Interest bearing Securities.—Jute Mills Preference Shares were well-supported, while among Industrials, the feature of the week has been the strong demand for Kumardhubi Engineering 7 per cent. Preference, which from a quotation of Rs. 57/- sharply advanced to Rs. 74/- in two days trading. Arthur Butler 7 per cent. Preference were marked up to Rs. 13/4 on the declaration of dividend. B. I. Corporation 8 per cent. Preference to Rs. 134/- cum dividend and British Ceylon Corporation 6 per cent. Preference to Rs. 5/14. Good Coal and Tea Preferences were also in request but scarcity of scrip accounted for the restricted turnover.

Among Debentures a fair business was put through in the Calcutta Port Trust issues at hardening rates. Enquiry was in evidence for Calcutta Municipal issues also, but no business was reported so far. Among Jute Mills' issues only a solitary deal was reported in 6½ per cent. (1933/43), Hukumchand at Rs. 100/8.

Other Investment Stocks.—Imperial Banks shares shew no change on the week. The fully Paid-up issues changed hands at Rs. 1,265/- and Contributories at Rs. 313/8. No business of any note was reported in any other Bank's shares. Among Light Railways, shares carrying 3½ per cent. Government Guarantee were in strong demand, but offerings were practically nil. Sara-Serajgunge and Mymensing, Bhairab Bazar (rebate) also were in request. Buktiarpur-Bihar were no offer. A fair amount of support was in evidence for steamer transit group, and particular demand was noticeable in India General Navigation & Railway (only), which from a quotation of Rs. 85/- sharply advanced to Rs. 99/- in a day's trading. Port Shipping and Calcutta Landing & Shipping were also met with a good support. The former kept steady at Rs. 18/4 while the latter advanced a rupee to Rs. 10/8. Bengal Assam Steamship were marked at Rs. 181/-.

Cottons.—Although a minimum of transactions were put through in Cotton shares, rates for the most part kept fairly steady. Kesoram (ordy.) improved to Rs. 3/8, while Benares Cotton & Silk and Cawnpore Textiles have still buyers at last levels. Bengal Nagpur (ordy.) and Dunbar (ordy.) remained quotably unchanged.

Coals.—An important demand was noticed in this section and a definitely healthier tone was apparent, presumably in view of the optimistic note sounded by the Chairman of the Indian Mining Association at its Annual General Meeting held recently.

Amalgamated was no doubt, the best feature at Rs. 17/- since 1930. Bengal was also in fair demand at Rs. 245/-. Burrakur (ordy.) kept steady at Rs. 14/6. East Indian was quoted at Rs. 17/-, Equitable at Rs. 21/8 while New Beerbhum (ordy.) improved to Rs. 12/12 and New Manbhum to Rs. 23/8. Raneegunge kept steady at Rs. 41/8. A fair business was put through in South Karanpura and Talcher at hardening rates. Sebbpore and Sendra also changed hands at steady rates. Exceptionally, however, Bhulanbararee and Standard were marked down to Rs. 5/4 and Rs. 25/10 ex. dividend respectively.

Latest reports from Collieries indicate that there has been a fair demand for Coal during the week.

Jutes.—There was no important development in the commodity markets, since we reported last. The better feeling, which was in evidence during the latter part of the previous week, following the report of a reduction of Stocks of Hessians in U. S. A., has not been maintained at the opening of the market on Monday, this week, and dull conditions have again obtained. 9 Porters Hessians are quoted at Rs. 9/12 at the time of writing. Owing to bear pressure raw jute market was depressed.

Howrahs opened at Rs. 55/3 on Monday and fluctuated within narrow limits, while Kamarhattys were more or less unchanged round about Rs. 550/-.

From Tuesday onwards a better tone was again set in on good support from professional operations, although there was no particular development in the goods markets. Howrahs touched Rs. 56/6 on Thursday evening and Kamarhattys to Rs. 563/-.

Among lower-priced stocks Clives were in better demand and advanced a rupee to Rs. 30/7 and Presidencies were also firm at Rs. 6/-.

Hukumchands changed hands at Rs. 13/4 and Nationals at Rs. 25/12. Among higher-priced denominations Inchcape Group was a strong feature. Gourepore advanced sharply to Rs. 480/- on the rumour of a better dividend. India after an interval of many months came to business at Rs. 232/- on Monday and from which figure it sharply advanced to Rs. 292/- on Thursday with buyers over on dividend prospects. Nuddea advanced further to Rs. 32/- and Megna improved to Rs. 36/- from a quotation of Rs. 25/-.

Among others, Anglo-India was a firm feature and changed hands up to Rs. 396/-. Bally kept very steady at Rs. 186, Barnagore at Rs. 166/-, Budge-Budge at Rs. 353/-, Fort William at Rs. 290/-, Fort Gloster at Rs. 570/-, Lansdowne at Rs. 166/-, Orient at Rs. 230/- and Naihati at Rs. 432-8.

We maintain our view that although there is still scope for further movement in the prices of Jute Mills shares, investors and speculators should proceed with caution in view of the fact that rates have already reached a high level.

Electricals.—Electric Supply Companies shares met with a better enquiry. Agra Electrics changed hands at Rs. 103/-, Bareilly Electrics were marked up to Rs. 12/4 with buyers over. Bengal Telephone (new) were dealt in at Rs. 14-12, Cuttack Electrics were quoted at Rs. 5/8 and Patna at Rs. 13/4. Upper Ganges continue to find buyers at full rates.

Engineering.—The feature of the week has been the strong demand for the Engineering Concerns' shares at rapidly advancing rates. In view of the Earthquake reconstruction work in North Behar, Engineering Companies are expected to get sufficient orders from that quarter. Arthur Butler, whose works are situated in the affected areas, although suffered considerable damages by the Earthquake, their loss has more than compensated by the large amount of new orders which they have already received. Their report and accounts recently published provide a very satisfactory reading. After providing for all expenses they have paid Preference dividends for two years and carried forward a substantial credit balance. They are now quoted at Rs. 8/12 and it is expected that they will shortly reach the par value. Kumardhubi Engineering was another feature. The steady improvement which was in evidence in these shares for sometime past took a definite turn for the better on Tuesday on strong buying on Bombay account and the rate sharply advanced to Rs. 4/- in a days trading. They are now quoted at Rs. 4/6 buyers. Indian Iron & Steel also was very strong and a fairly large turnover resulted at rates ranging between Rs. 6/12 and Rs. 6/14. Bengal Iron kept very steady at Rs. 4/9. Burn & Co. (ordy.) improved further to Rs. 236/-, Marshalls were in better demand and advanced to Rs. 1/12, Saran Engineering improved further to Rs. 8/10 and Steel Products to Rs. 3/2. Britannia Building & Iron kept steady at Rs. 4/2.

In fact almost all the Engineering Companies shares have made a better showing and it is confidently expected that this section will remain very active for sometime to come. Prospective buyers are, however, reminded to use their discretion before making any purchase.

Sugars.—The steady enquiry for Sugar Shares continued and prices, on balance, are higher than those ruling last week. Carew & Co. improved to Rs. 16/8, Cawnpore (ordy.) were marked up to Rs. 31/4, Champaran were quoted at Rs. 21/-, New Savan were dealt in at Rs. 13/- and Samastipore Central at Rs. 10/-.

Miscellaneous.—British India Corporation's ordinary shares advanced to Rs. 1/8 and Defd's to Re. 1/-, Calcutta Ice were marked up further to Rs. 10/14 from a quotation of Rs. 9/4 on a strong enquiry. British Ceylon Corporation were marked at Rs. 7/2 while Midnapore Zemindary (ordy.) improved to Rs. 64/-, Titaghur Paper (ordy.) kept steady at Rs. 15/9, Bengal Timber (ordy.) at Rs. 129/- and Burma Corporation at Rs. 9/6.

Teas.—Satisfactory prices were realised in last local sale for internal consumption and London advices also indicate a steady undertone. Reports coming in, so far, for the workings of 1933 provide satisfactory reading. More interest was evinced in Tea shares in the local Stock Exchange, particular favourite being Tezpore, which changed hands in fair quantities up to Rs. 9/14, owing to the rumour that this Company has done very well. Naga Hills, on the declaration of a dividend of Rs. 1/8 per share kept very steady round about Rs. 18/8. Bishnauth, East

India, Hattikhira, Lede and Phaskawa also changed hands at improving rates. Further appreciation of prices are expected in this section in the near future.

MADRAS STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Madras, March 23.

The securities market was firm throughout, with considerable speculative business done in Paper, and improvement in 4 per cent. 1960-70 loan and 3½ per cent. 1947-50 on investment support. The closing was easier on account of profit-taking and the approaching holidays. The other securities were practically neglected.

Amongst State loans, 5 per cent. Mysore Loan was taken up at Rs. 114-6, 6¼ per cent. Mysore Loan at Rs. 115-2 and 6½ per cent. Mysore Loan at Rs. 117-10, whilst Cochin Loan again recorded deals at Rs. 105-2.

The demand for Madras Corporation debentures continued unabated, with practically no sellers in the market even on a 4 per cent. yield basis.

Amongst Joint Stock Company debentures, both issues of United Nilgiris were in demand whilst Vellores were marked up on news of the option offered to the debenture holders to convert debentures into ordinary shares. Singareni collieries, new issues, were in demand at Rs. 3 premium. The preference share market was steady with business done in Spencers "B" at a shade over par, whilst a large line of Vasanta preferences changed hands at Rs. 106¼ cum dividend. Tata Iron and Steel, second preferences were a popular feature at Rs. 122½.

Bank shares were steady, Imperial Contributories were taken up at Rs. 314¼ whilst Indian Banks improved further to Rs. 96 with buyers over. Small shares hardened to Rs. 19¼, Centrals were lower at Rs. 24.

Mill shares were steady, with the exception of Gokaks, which were sharply marked up to Rs. 121, on Bombay buying. Gokaks are likely to improve further.

Public utilities were firm, Trichy Srirangams were taken up at Rs. 151-8, whilst Vellores improved further to Rs. 12. The Corporation is making a new issue of 8,000 shares at Rs. ⅛ premium to replace the existing debentures. The debenture holders have the option to take up these shares at this premium. No shares are likely to be available for subscription either for the old shareholders or to the public.

Tata Power, ordinary shares, were done up to Rs. 1,007½ closing easier at Rs. 990. Madras Rangoon Telephones were in demand without attracting sellers. The Cement section was active. Indian cements have declared a dividend of Rs. 17½ per share ; and this increased dividend led to considerable interest. Shares were done as high as Rs. 375, closing lower at Rs. 367½. Katnis, Shahabads and United Cements were all in demand and showed an improvement. Sugar shares were idle, though India Sugars further weakened to annas 8 discount, sellers. At the close, Mysore Sugars were in demand at Re. 1 premium.

The planting section was lively, Cochin Malabars wanted in popularity ; but Malanaras were enquired for up to Rs. 37. Highland Produce shares were done at Rs. 21 cum dividend with sellers over, whilst Nilgiri Neerugundis were again taken up in quantities at Rs. 1-4. Kalasas were done at Rs. 2-8 and Peermades at Rs. 20, whilst Periakaramalais had no sellers below Rs. 44. United Nilgiri met with moderate support at Rs. 99, whilst Vellamalais, after being done at Rs. 10, jumped to Rs. 11 buyers. The Miscellaneous section was inactive except for a fall in Tata Iron and Steel, ordinary, shares to Rs. 55½ and Burma Corporations to Rs. 9-12.

BOMBAY STOCK EXCHANGE

(By Wire)

(From Our Correspondent)

Bombay, March 23.

Securities:

The giltedge market after some vacillation firmed up rapidly. Despite the over-bought condition and the rather indifferent advices about Indian sterling loans, frequent bullish raids appeared. The apparent easy level of money rates, the optimistic attitude of banks and conversion contributed to this rise. 3½ per cent. Government Loan after touching Rs. 88-11 closed to-day at Rs. 88-7-6, there was also a fair investment demand for cash scrips.

Shares:

Bulls continue to sway the market but rates underwent numerous fluctuations as frequent realising operations transpired. Bombay Burmas and Tata steels suffered a setback and the former rather severely. There was a fair demand for cement group particularly for Indian Cement. Belapur sugars were easier and big power shares experienced frequent bursts on speculative activity. Textile concerns continued to be in the limelight but to-day almost lost the rise achieved. The important fluctuations are noted beow:

	Previous close		Highest		Lowest		Close to-day

JUTE AND JUTE GOODS

JUTE

Calcutta, March 22.

Easy conditions have prevailed in the raw jute market throughout the week, a steadier feeling, however, developing towards the finish. The highest and lowest price for May futures were Rs. 30-6 and Rs. 29-4 per bale respectively.

Due to better advices from London, the market on Friday opened steady but on account of the weaker hessians market, anticipating the motor strike in U.S.A., the market closed easy. Saturday's market likewise ruled narrow with an easier feeling. On Monday the market ruled easiest, futures touching Rs. 29-4 due to weaker hessians which was no better than Rs. 9-8. Later, however, due to better enquiry from shippers at Rs. 28 the market showed a resistance against fall. On Wednesday the market sharply rose to Rs. 30-4 on news of the passing of the Bankhead Bill and in sympathy with the hessian market which was ruling at Rs. 9-12.

Fair business was done in ready firsts at Rs. 28, March Rs. 28-4 and April Rs. 28-8, although the volume of business was not so large as last week. Mills have also shown some interest at Rs. 4-8 for District L.R. with buyers over at this price.

In view of the difference between ready and May futures having narrowed down to Rs. 1-8 against Rs. 2 last week, and Rs. 3 week previous to last, there were heavy covering order by bears and also against hedge sales. The bull liquidation having been for the most part over during the previous weeks, there was a scarcity of sales at the decline, and this factor alone accounted for a sharp rise on Tuesday and Wednesday.

Arrivals of jute in the Mofussil continue to be on the small side, and sales by week and small holders in view of the approaching financial New Year (Ramnavani) is also over. Weather conditions are satisfactory in the jute-growing districts, but rain is urgently needed for carrying sowing operations. The progress in this direction will be seen from the report of Messrs. Sinclair, Murray published below.

The bull factors, namely, want of rain, poor arrivals, and narrowing down of difference between ready and futures have been partly discounted and the market so far has responded to the same. The maintenance of steadiness in the prices and further advance in jute values will not so much depend upon these factors but on the buying interest, the spinners here and abroad, will show at the rise. The experience so far goes to show that they are always in the habit of withdrawing from the market as soon as a rise has taken place. If it happens so, the healthy feeling of the market will not take long to vanish.

SOWINGS

Messrs. Sinclair, Murray & Co., in their first Jute Crop report of the season dated March 17 say:—

General.—Owing to recent hot and dry weather conditions, sowings have had to be suspended in some districts. General rainfall would be beneficial both to enable cultivators to complete preparing the land as also to continue sowings.

Narayanganj.—The weather durng the week has been hot and dry. Sowings on the chur and low lands have been completed, but further sowings are suspended for want of rain. Sowings to date are estimated at 5 annas against 1 anna at this date last year. Condition of seedlings satisfactory. River is slightly lower than at this date last year.

Chandpur.—The weather has been favourable but rain is now required to enable cultivators to continue sowings. Sowings to date are estimated at 7 annas against 9 annas at this date last year. Condition of seedlings satisfactory. River is about 1 ft. lower than at this date last year.

Chaumuhani.—The weather has been favourable. Sowings to date are estimated at 3 annas against ¼ anna at this date last year. Rain is now required to enable cultivators to continue sowings. Condition of seedlings satisfactory.

Akhaura.—Hot and dry conditions have prevailed during the week. Sowings to date are estimated at 1½ annas against *nil* at this date last year. Sowings have been suspended for want of rain. Condition of seedings satisfactory. River is slightly lower than at this date last year.

Niklidampara.—The weather has been hot and dry. Sowings to date are estimated at 8 annas against *nil* at this date last year. Sowings are suspended owing to lack of rain. River is at the same level as at this date last year.

Sariskabari.—The weather has been favourable and sowings are progressing. Sowings to date are estimated at 1½ annas. River is at about the same level as at this date last year.

Mymensingh.—The weather has been favourable. Sowings to date are estimated at 1 anna.

Elashin.—The weather during the week has been hot and dry. Sowings to date are estimated at 3 annas but are now suspended owing to lack of rain. River is steady at about last year's level.

Serajgunge.—The weather has been favourable and sowings are progressing. Sowings to date are estimated at 1½ annas against ½ anna at this date last year. The river is about 2½ feet lower than at this date last year.

Bhangoora.—The weather has been favourable and sowings are progressing. Sowings to date are estimated at 4 annas against 3 annas at this date last year. Rain is now required to enable cultivators to proceed with sowings. The river is slightly higher than at this date last year.

Madaripore.—The weather has been unfavourable owing to lack of rain and sowings are at present suspended. Mesta sowings have been completed and are estimated at approximately 15 per cent. more than last year. River is slightly lower than at this date last year.

As a basis of comparison we take last season's crop as 16 annas.

London March 22.

The raw jute market has been ruling steady with a fair amount of business passing round about £16-5-0. Values are well maintained and also gained some strength on better advices from Calcutta, the latter being very bullish in their ideas and expecting higher prices. The feeling here has been that though the supply of the fibre in up-country centres appears to be scarce, yet the stocks of unsold jute at most centres are large and well over normal and the statistical position taken as a whole, does not indicate any scarcity of the fibre this season. The supply for Dundee is well ahead and the actuals are above the last season.

JUTE MANUFACTURES

Calcutta, March 22.

During the earlier part of the week the hessian market showed considerable weakness, due to sales by a big Bombay operator and on Monday values declined to Rs. 9-8. The strength that was gained over the last week-end on reduction of stocks in U.S.A. and increased consumption during February, could not be maintained in the face of heavy selling pressure. Later in the week the market began to recover the lost ground, specially on the passing of the Bankhead Bill and on the news that the threatened strike in U.S.A. has been postponed. Early in the week news was received that a million workers in motor industries are likely to lay down tools unless the motor manufacturers withdraw their refusal to recognise any Union affiliated with the Federation. Along with the motor strike, Railwaymen were also reported to follow in view of the proposed ten per cent. cut in wages. This had a very disturbing effect on the market, as the strike was believed to be one of the biggest in the history of the U.S.A. and could paralyse the present recovery programme. According to the latest news the Motor Car Union leaders have, in accordance with President Roosevelt's desire, postponed action for two days, while the Railways have postponed the wage-cut until December 31, 1934.

From the point of business, the week has been very dull. Though fluctuations have been considerable, there has been small business between Bazar and Mills and also from the consuming centres abroad.

The market has been showing a fair amount of resistance against a fall, but the bear factors have been too many and the inability of the market to sustain itself at a rise has very greatly shaken the faith of bull operators and a nervousness has developed. The competition in consuming markets by manufacturers on the Continent has been a bear factor for a long time. At the same time, there have been rumours in the market that Japan has been offering heavy goods to Australian and Eastern markets at prices below Calcutta parity. It is believed that the total quantity which Japan can supply at the moment will be quite insignificant, but, taking the longer view of the situation, if Japan once starts competing with Indian Mills it is not difficult to imagine how serious the menace might prove in due course.

COTTON AND COTTON GOODS

COTTON

(By Wire)

(From Our Correspondent)

Bombay, March 23.

Despite the passing of the Bankhead Bill through the House, American markets declined due to labour troubles, southern selling, foreign selling, weak spot situation, and unfavourable interpretation that was placed on the Stock Exchange Control bill. New York May declined from 12.25 to 11.92 after moving between 12.21 and 11.66. Liverpool May has come down from 6.27 to 6.09 at 6 p.m. Broach April/May in Bombay improved to Rs. 202-12 from Rs. 201-12 but tumbled down to-day to Rs. 195-8.

Calcutta, March 22.

The market like the previous week, has ruled quiet and fluctuations have been narrow. The highest and lowest quotations for Broach April/May were Rs. 202 and Rs. 199. The New York and Liverpool Markets have likewise remained narrow prices hovering round about 12.25 cents and 6.25 pence respectively.

The long awaited Bank-head bill for compulsory cotton control has been passed by the House of representatives by 251 votes to 114. It limits the production of cotton in U.S.A. to 10 million bales and also levies a tax of 50 per cent. of the market value on staple cotton produced in excess of the quotas allocated to producers. The Bill has been duly endorsed by President Roosevelt.

The passage of the Bill had very little effect on the market firstly, because the provisions were already long known to the market and its implications were duly discounted. Secondly, the period coincided with the probability of the strike in U.S.A., the latter having a very bearish effect on the markets in general.

The Bombay Government have passed the Bill abolishing the local town duty of Re. 1 per bale on cotton from April 1, 1934. Simultaneously the G.I.P. Railway authorities have decided from the same date, to reduce freight rates on all cotton that is imported in Bombay. In addition to the reduction of freight the G.I.P. Railway is contemplating making arrangements for direct shipment of cotton from a growing centre to a particular ship in the harbour. The Trust authorities have also reduced their dues on cotton to a fair extent. The announcement of the above concessions was welcomed by the Bombay market, though it had no immediate effect on prices. On the whole the reduction in these charges must in the long run have a beneficial effect on cotton.

The statistical position is still heavy, stocks in Bombay are estimated at 1.16 millions bales on March 15, against 1.09 million bales on March 8, 1934, and .68 million bales on March 16, 1933. It must, however, be remembered that the peak of the Indian cotton crop movement has already been reached. The weekly ginning activity showing the return of 158 thousand bales on March 2, 1934 as against 210 thousand on February 2, 1934, 217 thousand on January 26, 1934—the highest of the season. The total press return show 2.93 million bales up to March 2, 1934 as against 2.19 million bales the same day in 1933.

The market, however, seems to be two-sided and narrow.

BULLION

GOLD

(By Wire)

(From Our Correspondent)

Bombay, March 23.

The market for the yellow metal ruled stagnant. As sterling-dollar rate improved from 5.09 7/8 to 5 11¼ (after touching the lowest at 5.09 1/8) some easiness resulted. The London gold rate declined from £6-16-4 by fourpence; France rate reverted to 77.46 after moving between 77.34 and 77.56. The local rate just touched Rs. 33-14-3 from Rs. 33-13-3 but slid down to Rs. 33-11-6.

During the current week the gold market has ruled very narrow the highest and lowest price were Rs. 33-13-6 and Rs. 33-11. London-New York cross rate has remained about 5.09 and London-Paris cross rate about 77.50 Stocks in Bombay are estimated at 3 lakhs tolas. Export per S. S. Rawalpindi has amounted to Rs. 93.4 lakhs. Sovereigns are quoted at Rs. 21-5. The market has been featureless.

SILVER.

(By Wire)

(From Our Correspondent)

Bombay, March 23.

The statement by the Secretary of the Treasury that the Government are not at present disposed to do anything further for silver, was followed by reassurances from the Speaker of the House of Representatives that he will allow voting on bills. The Bill authorising to receive payment in silver against American export of commodities was passed and is now lying before the Senate. Nevertheless, the silver markets are on the wane since the aforesaid statement declining in London from 20 5/8d. to 19 15/16d. and in New York from 45 7/8 to 45¼, in Shanghai from 1-4 9/16 to 1-4¼, in Bombay from Rs. 56-4 to Rs. 54-14 for Ready. Bombay April rates for silver declined from Rs. 62-5 to Rs. 60-13. It appears that operators have lost faith in any tangible rehabilitation of the white metal.

Since reporting last week the silver market has ruled very easy and prices are considerably lower over the previous week. The weakness as anticipated during the previous week has materialised. The Bill proposed by Senator Wheeler was opposed on the grounds that in case U.S.A. passed a legislation authorising the Government to buy silver at the unusually heavy holdings by the speculators will be thrown on the market, and on face of these sales it will be difficult to maintain the proposed price.

Following the news of the opposition to the Bill there was heavy bull liquidation by holders in Indian market and prices have come down from Rs. 57 to Rs. 55. Further weakness was noticeable in the market on receipt of the news that the Standing Committee has approved the Government of India's memorandum regarding the sale of surplus silver, which provides that the Government would hand over Rs. 50 crores to the Reserve Bank in silver rupee and sell the balance as and when necessary.

London silver has declined to 20¼d. and Shanghai dollar to 1s. 4⅜d. At the moment there is not much room for a decline but the market on the whole is weak. Stocks in Bombay and Calcutta are estimated at 10,000 and 2,000 bars, daily offtake is about 50 bars a day at both the places taken together.

TEA AVERAGE.

The following are the average prices of tea in the London market during the week :—

India Tea (Northern) ...	14.45d.	14.02d.
Indian Tea (Southern) ...	14.33d.	14.28d.
Ceylon Tea	15.48d.	14.94d.
Java Tea	12.30d.	12.29d.
Sumatra Tea	11.86d.	11.84d.

Imports of Tea of all kinds into the United Kingdom, during the month of February 1934, compared with the previous month and with February 1933, were as follow :—

From British East Indies (except Ceylon) ...	20,950	29,125	15,581
From Ceylon	10,097	13,133	9,202
From China (including Hongkong and Macao) ...	77	634	397
From Other Countries ...	7,356	4,195	3,716

INDIAN TEA

At the London auctions on March 19, 25,300 packages of Indian tea were submitted for sale.

There was a good general demand. Prices, particularly for medium qualities, were in buyers' favour.

The following were the lowest prices fetched during the day's auction :—

Common Pekoe last auction 12¼d., to-day's auction 12¾d. lb. ; Common Broken Pekoe last auction 13d., to-day's auction 13d. lb. ; Common Orange Pekoe last auction 13d., to-day's auction 13d. lb. ; Common Broken Orange Pekoe last auction 13¼d., to-day's auction 13d. lb. ; Common Broken Pekoe Souchong last auction 13d., to-day's auction 13d. lb.

The following are the value prices :—

Clean Common Pekoe last auction 13⅜d., to-day's auction 13¼d. lb. ; Clean Common Broken Pekoe last auction 13⅜d., to-day's auction 13⅛d. lb. ; Clean Common Orange Pekoe last auction 13⅝d., to-day's auction 13⅜d. lb. ; Clean Common Broken Orange Pekoe last auction 13¼d., to-day's auction 13⅜d. lb. ; Clean Common Broken Pekoe Souchong last auction 13¼d., to-day's auction 13d. lb.

SUGAR

Calcutta, March 22.

The market has been ruling easy and dull without much business passing. Java has declined by an anna and is now quoting Rs. 10. This was due to pressure for sale by holders locally, more than due to expected arrival of two steamers. Indian sugar is pouring in in large quantities due to the excise duty becoming applicable from April 1, 1934. The tendency of the market is easy without any encouraging feature visible.

SUN LIFE ASSURANCE COMPANY OF CANADA

The 63rd Annual General Meeting of the Sun Life Assurance Company of Canada was held in Montreal on February 13, 1934, when the Company's operations during 1933 were reviewed by Mr. Arthur B. Wood, Vice-President and Managing Director of the Company. The New Business of the Company for the year ended December 31, 1933, amounted to £44.5 millions as against £58.4 millions in 1932, and the amount received during the year for purchase of annuities was £2.65 millions. The total assurances in force at the end of the year amounted to £560.5 millions. The total income for the year was £30.75 millions which exceeded the disbursements by nearly £5 millions. The total assets of the Company increased to £128.3 millions. The cash profits allotted to the policyholders during the year amounted to £3.3 millions. The Company has considerably increased its holdings in Government bonds. Its careful selection of lives was again reflected in the favourable mortality rate experienced during the year, the actual death claims being only 58 per cent. of the expected. Expenses of management showed a further reduction.

MISCELLANEOUS

WHEAT

The wheat market has ruled easy and valuson balance are lower over the previous week. May Beta has come down from Rs. 3 to Rs. 2-15. The values by themselves are far too low to warrant any appreciable decline although the stocks held inside the country are more than necessary for internal requirements, and there is little prospect of their finding any outlet.

The markets overseas have ruled slightly steady. There has been reports of snow in Canada and the U.S.A. sentiment is generally bullish. The Australian wheat crop is estimated to be 50 million bushels less than last season's which is a strengthening factor. The wheat advisory committee will meet on April 5, 1934 when fresh efforts will be made to overcome the existing difficulties of excessive stocks the world over.

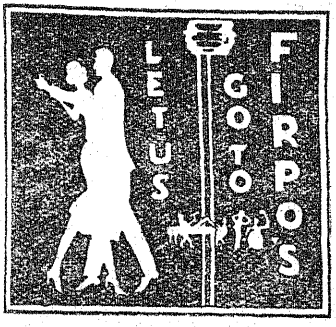
Editorial Comments



1933—AND ITS LESSON.

The "Review of certain main items of the foreign trade of India during the calendar year 1933"—issued, in pursuance of a notable practice which Sir George Schuster has introduced, as part of Budget papers—has, in a sense, only a limited interest to readers of *Indian Finance* as the *Commercial Supplement*, which we bring out every year at January-end, furnishes, a month in advance of this Government publication, a survey of trade and finance for the calendar year. Nevertheless, the Review, the credit for whose comprehensive treatment is due to Dr. Meek, the Director-General of Statistics, affords, on many matters, information which is not either easily or readily available to us ; and, from this point of view, it is a welcome addition to our statistical literature. Moreover, the *Commercial Supplement* deals more with markets and market trends, and less with total outturn of the various crops, their value, provincial distribution ; total outturn of principal industries, their provincial distribution etc. In this regard, the additional information supplied by the Director-General within two months of the end of the year is at once topical and valuable. We congratulate Sir George on this innovation, and Dr. Meek on the thoroughness and skill with which he has carried out the commission entrusted to him.

* * *

The crop position in the year under review was "fairly good" ; the rainfall was well-distributed and timely, neither prolonged breaks nor excessive downpour ; the harvests were satisfactory, with marked increase in sugar-cane and deliberate decrease in tea. The Gods were propitious ; Mother Earth was kindly ; the tillers of the soil did their part well. But the result was far from encouraging. The value of the total production of the principal crops is considered, in the following table, in each province in 1928-29 and 1932-33.

Provinces.	1928-29 Values in lakhs of Rs.	1932-33 Values in lakhs of Rs.	Change in value in lakhs of Rs.	Percentage decrease from 1928-29.
Madras ...	1,80,78	99,33	−81,45	−45.0
Bombay ...	1,20,52	83,86	−36,66	−30.4
Bengal ...	2,32,59	90,54	−1,42,05	−61.1
United Provinces	1,40,52	91,01	−49,51	−35.2
Punjab ...	76,78	48,53	−28,25	−36.8
Burma ...	63,38	29,45	−33,93	−53.5
Bihar and Orissa	1,35,17	56,55	−78,62	−58.2
Central Provinces	68,77	35,40	−33,37	−48.5
	10,18,51	5,34,67	−4,83,84	−47.5

* * *

The agriculturalists of India have, thus, lost nearly Rs. 5,00 crores as compared with the pre-depression year. It is argued that the general world tendency has been towards a heavier fall in the prices of agricultural produce than in those of manufactured goods and that India, being a predominantly agricultural country, could not help being affected in a particularly adverse degree. This facile assumption is not borne out by a study of Table I, (page 2), showing the Index Numbers of Wholesale Prices in some of the principal countries of the world. Australia is a country similarly placed and depending on primary products. Yet, between December 1931 and October 1933 (the latest figure available is for October 1933) the Index of Wholesale Prices in Australia has actually risen from 142.5 to 144.5, after touching 148.1 in September, 1933 (1911=100). On the other hand, the Index of Wholesale Prices in India fell from 98 in December 1931 to 88 in October 1933, rising a point in December 1933. Australia and India have many common points. Both of them have yet to traverse a long way before they can be said to be industrially self-contained. Both export primary produce, and depend on these exports for the surplus needed for the meeting of Overseas commitments. Both have an annual drain in the shape of interest charges on foreign loans and otherwise.

* * *

Australian finances, budget, credit and international balance-sheet were in an extremely precarious state four years ago. Yet, there is now noticeable notable improvement in every direction. The Australian budget is balanced in letter and spirit ; the Indian budget is balanced only by recourse to make-shifts. The economic condition of Australia has improved considerably ; in India, economic depression continues as wide-spread and as grave as ever. Australia's international balance-sheet shows enough surplus to provide requisite foreign balances ; the Indian international balance-sheet will be a thing of shreds and patches but for exports of Treasure to the value of Rs. 77.01 crores in 1932 and Rs. 52.07 crores in 1933. The only satisfactory feature in the case of India is an apparent comfort in the technical ways and means position of the Treasury, and resultant rise in gilt-edge securities. The credit for this is due less to any deliberate policy of the Government than to the unavoidable shipments of "distress" gold and the repercussions which these exports had on various aspects of the money market and Government finances. Australia went about her economic reform with dash, courage, and single-minded devotion to her national interests. India has been tinkering with reforms in this regard. Her Government have been hesitant and half-hearted ; and their preoccupation has been British interests rather than Indian interests. Their financial, fiscal and currency policy is not fashioned to suit India ; policy in this regard is just what the India Office lays down as inexorable law.

* * *

Australia, belonging to the sterling group and owning blood kinship with the mother country, had no qualms about depreciating her currency 25 per cent. over and above the depreciation which sterling has undergone. India's adherence to the sterling group has to be not on her terms but on the terms forced on her. What is the result? India appreciated her currency in 1927 by 12½ per cent. and is now subject to a depreciation of about 35 per cent. in consonance with sterling. The net depreciation is, therefore, 22½ per cent. Australia has, first, 35 per cent. depreciation, and, on the top of this, a further 25 per cent. depreciation. The net currency depreciation in her case is, thus, over 50 per cent. Australia has, as a result, a pull of over 27½ per cent. as compared with India. It is currency depreciation more than any other factor that has helped Australia to rehabilitate her economy. It is the over-valued rupee that makes India cut such a sorry figure in the group of sterling countries. Table I, to which we have made reference, makes it abundantly clear that every country, which has depreciated its currency as a matter of intelligent and well-planned policy, makes a good showing as regards the trend of wholesale prices. The U. S. A. Index of Wholesale

Prices declined from 68.6 in December 1931 to 60.2 in March 1933 and, after the devaluation of the dollar, shot up to 70.9 in December 1933, touching the highest point (71.2) in October. Japan shows a rise from 151.0 in December 1931 to 178.7 in November 1933, the highest point touched in this period being in January 1933 (185.0). Why should India be prevented from doing what Australia, an Empire country, has been allowed to do? And why should not India share in the admitted benefits of scientific currency depreciation, the same as Australia, the U. S. A. and Japan have done?

WORLD TRADE AND INTERNATIONAL TRADE

Elsewhere in this issue we publish the conclusions of a study of figures for world trade in 1933 carried out by the Economic Intelligence Service of the League of Nations. The object of the study is naturally to ascertain the general trends of international trade during the past year and also to extract from the available evidence an answer to the questions regarding the revival from the depression. Though the memorandum claims to state a few "conclusions" it will be found that it leaves the reader with no clear idea of the main lesson of the experiences of world trade in 1933. The conclusions, as they have been stated by the Economic Intelligence Service, are by no means pointed. Much less do they help to put an end to the wavering one might feel between the rival ideals of economic nationalism and international interdependence. And for this, the authors of this enquiry are, no doubt, not to blame. They can only interpret the mass of statistics which they have on hand and indicate a few generalities the correlation and co-ordination of which must be left to those concerned.

* * *

We may recapitulate the main conclusions of the Survey before attempting to press them into the service of any theory. The outstanding fact is that the total volume of goods exchanged between countries has diminished by 30 per cent in comparison with 1929. The value of goods has fallen more sharply by 50 per cent, if we adopt the basis of gold prices. If, on the other hand, any other criterion such as the pound sterling is adopted, the drop is about 30 per cent or roughly equal to the drop in volume. If the two sets of percentages are combined so as to give an idea of total trade in 1933 as compared with 1929, it would be found that on the basis of gold, the total value of trade in 1932 is less than a third of the trade of 1929 and, calculated in pound sterling, scarcely a half. If we give prominence to the fact that the greater part of world trade today is transacted on the basis not of gold currencies but managed paper money like the pound or the dollar, we would still be left with the conclusion that world trade has been cut in half in a period of barely four years. As for the comparison of 1933 with the preceding years of the depression, all that can be said is that the decline in 1933 in the total value of world trade is not as much as in the previous years. That it continued to diminish is by now a matter of common knowledge. What is important is that the rate of decline has been reduced.

* * *

In assessing this fact it must be remembered that 1933 is the first year in the course of the depression in which the phenomenon of seasonal movement reappears. While, on the one hand, it is gratifying that seasonal forces were at last able to assert themselves, this same fact may also tend to detract from the significance of the arrested decline in the value of world trade. Nevertheless, taken together they may indicate a tendency towards the stabilisation of international trade at a new normal which is very much less than the pre-depression level.

* * *

This means that the forces that have tended to reduce the volume of world trade are losing, if ever they had, their transitory character, and have, in other words, come to stay. By far the most important of such forces is the duplication of manufacturing equipment which started in the immediate post-war years and has continued ever since. It follows from this that whatever may happen to other commodities traded on an international basis, the exchange of manufactured goods among the nations must inevitably be on the downward trend. "The most considerable reductions in world trade have happened in the exchange of manufactured goods, while trade in raw materials and food stuffs has been better able to resist the crisis." This shows that the attempts made by predominantly industrial countries to reduce their dependence on foreign supplies of foodstuffs have not been as successful as the attempt of agricultural countries to produce within their borders the manufactured goods which formerly they had imported from abroad. That is, a process of levelling up the wealth and production in agricultural and industrial countries is well on the way ; and till this process is completed, it is idle to expect the elimination of the present flux in international trade movements. It is only when the conflict between the productive activity engendered by new ambitions, on the one hand, and the old established distribution of industry and trade on the other is reconciled by either the abandonment of such ambitions or by the older industries going out of production, that the reappearance of smooth international commercial relations can be expected.

* * * *

Where there is no conflict, recovery has apparently been easier. The Survey of the Economic Intelligence Branch has the following illuminating remarks: "The most significant signs of recovery during 1933 are shown in the countries whose economic production is complementary. As a typical case, we may point to the trade between Great Britain and the Dominions." It follows from this that, unless productive activity is distributed amongst the nations of the world in a manner that would make all of them complementary to one another, recovery in the sense of expansion in the goods exchanged cannot be expected. The besetting sin of international trade in the past has been that nations attempted not so much to expand the customary exports and imports, but to develop an export trade in new lines which inevitably meant a duplication of productive activity and consequent dislocation of international trade relations. It is not unreasonable to hope that the numerous trade treaties which have been concluded and are being attempted on a bilateral basis will, in a large measure, determine a reasonable partitioning of production and markets.

* * *

Our readers will remember that we have always held the view that, in spite of the severity of the depression, and, in a sense, precisely because of it, it is possible that within the confines of each national economy a recovery may be afoot, whose effects on international trade would be felt, if at all, only after a considerable lapse of time. In our examination of Dr. Condliffe's *World Economic Survey* some time ago, we pointed out the need for the Economic Intelligence Branch of the League of Nations bestowing its attention as much on the development of each national economy as on the developments in the sphere of international trade. For we believe that international trade will in the future occupy a smaller place in world economy than it has done in the past, and that a position may before long be reached when the volume and value of international trade will not be an adequate index of the state of world economy as heretofore. Mr. Condliffe's description of the present phase of world economy suggests a well-nigh insuperable difficulty in the way of accomplishing this task. In fact, Mr. Condliffe expressly ruled out the possibility. We are gratified to find that in the small memorandum under review, the authors have attempted to indicate the nature and extent of the increasing activity in the home markets of several countries. They observe that "in the summer and autumn of 1933 several countries showed increase in activity in home markets accompanied by definite drop in the number of unemployed and increase in industrial production." But this movement of recovery initiated by the activity of private enterprise with or without the support of the National Government became uncertain and irregular by the end of 1933 and at the beginning of 1934. And the authors suggest that the likely cause of this recession is the international political position which is far from being stable. We confess we do not see clearly the connection between the two. And we would hold it a likelier hypothesis that the recession in the home markets has been of a seasonal kind and due psychologically to the feeling of hesitancy which Governments engaged in directing economic activity along new channels are found to feel, once they have taken a step or two on that path.

* * * *

We consider that the time is come when the Economic Intelligence Branch of the League of Nations should recognise the distinction that there is, unquestionably, between world trade and international trade. Obviously, the former should include the amount of trading that is done within the confines of each country and now that international exchange of commodities has tended to dwindle owing to the inauguration of new productive activity in some of the older countries and an increasing measure of economic self-sufficiency, it would be difficult to obtain an accurate picture of world economic trends, until we procure a set of indices to the state of world trade, as distinct from mere international trade. We are not blind to the immensity of this task and the numerous obstacles in the way. But no conclusions in regard to the nature and extent of the recovery that is now afoot can be made, till we are in a position to check or correct the impressions derivable from the volume and value of international trade by means of statistics referring to world trade.

INTER-GOVERNMENTAL CONFERENCE

The main items of the agenda of the Economic Conference between the Provincial and the Central Governments foreshadowed in the budget speech of Sir George Schuster are now available. And the issues that have been framed for discussion therein are of such momentous importance that it is desirable that public interest and discussion should be kept up at the highest pitch before the Governments concerned actually meet at New Delhi. Sir George announced in his budget speech: "We have now with the cordial approval of these (Provincial) governments arranged to have a conference early in April at which we can together review the whole situation and consider this problem of indebtedness together with all possible lines of concerted action to improve the general economic situation." It is now reported that the Delhi Conference will also consider questions like the methods of improving the financing of agriculture, the provision of stapling, warehousing and marketing facilities for agricultural products, the development of irrigation and means of communication, the possibility of establishing new industries in addition to the improvement of existing ones and the need for founding a Central Research Institute. It is also learned that the question of tariffs and their effect on agriculturists will be included in the agenda, besides rural education and how far it can be directed on realistic and practical lines.

* * *

One significant omission, to which pointed attention has been drawn by the *Hindu* in the course of a lengthy editorial, is land revenue, which has so obvious a bearing on rural economy, that it is surprising that Government should have left it outside the scope of this Conference; unless it be that the Governments, Central and Provincial, alike, are nervous of giving further handle to the agitation for the reduction of land revenue. Even if it be supposed that Government are keen on showing themselves to be dead against a reduction of land revenue, they should be prepared to recognise that in a conference with such wide scope of discussion the system as such could be safely and appropriately included. But as it is too much to believe that any radical changes in land revenue system would be made at this juncture, the practical effects of this omission should be deemed to be altogether inconsiderable.

* * *

No one, who glances at the agenda, will help feeling that the aim of the Governments concerned is to secure the widest discussion of the economic questions affecting the welfare of the masses of the country. Many might even feel bouyed up at this evidence of a new-found interest on the part of the Government in the economic well-being of the people. But we are afraid that our experience in the past would suggest that such unrestricted scope of discussion is a danger, rather than a help, to tangible achievement. Though, of late, the provincial governments in the transferred half have endeavoured to grapple with the problems of agriculture and industry, we doubt if the various ministries are yet in a position to present well thought-out and cut and dried schemes for the uplift of the rural population. Some governments like those of Madras and the United Provinces have, during very recent times given thought to the questions concerning certain industries and some specific agricultural products. But it can hardly be said that they are quite clear in their mind as to what they should themselves do within their spheres, much less as to the exact

nature of the support which they would require from the Central Government. We would very much prefer to see the Interprovincial Economic Conference restrict its discussions to the problem of rural indebtedness which, we have reason to believe, impelled Sir George Schuster to convene this Conference.

* * *

We still hope that, true to his promise, Sir George would make every effort to see that the Conference gives of its best to the solution of the problem of rural indebtedness. In his budget speech, the Finance Member indicated three main lines of approach to the problem of improving the economic position of the agriculturists:

"First, how to deal with the increase in the real burden of the fixed money payments of the agriculturist due to the fall in prices and the accumulation of debt which is resulting therefrom ;

Secondly, how to increase the internal demand for India's agricultural produce ;

Thirdly, how to improve the external demand."

* * *

The last two, namely, the increase in the internal demand and the improvement in external demand for India's agricultural products, need not weigh much with us in our present discussion. For either they have obvious remedies or they are patently difficult to secure. The latter depends on the expansion of international trade either through the reassertion of the natural forces of recovery or through the conclusion of appropriate trade treaties on a bilateral or on a wider basis. This, surely, is not under India's control ; and while we may exert ourselves towards the conclusion of such pacts, the main conditions of success are not altogether in our hands.

* * *

As for the expansion of internal demand it is purely a question of creating purchasing power within the country. This should be done by the initiation of new productive activity through the establishment of new industries and expansion of existing ones or through the inauguration of new capital expenditure by Government. The ultimate solution might well lie in a judicious combination of both, namely, a large capital outlay on the part of the State with a view to the establishment of new industries.

* * *

But we urge that the problem of rural indebtedness in India is so old and so serious by itself that there is little justification and no need to consider it along with other questions. For our part, we do not believe that the problem of rural indebtedness has been rendered graver or more menacing by the present depression. The cultivator would have been no more solvent if the fall in prices had not been so disastrous. Nor would his creditor be more insistent on repayment in such a contingency. So far as the mass of cultivators are concerned, there had been an implicit standstill agreement in constant operation. The evil of agricultural indebtedness lies not in the recurrence of crises in the life of the individual cultivator but in that it deprives him of all incentive to improve his own economic status and the condition and productivity of the land under his care.

* * *

It would be unwise to imagine that we have, as in America a year ago, the necessity of stopping foreclosures by emergency legislation. Or that the debtor-creditor relation should be smoothened out by a process of price-raising. By presenting the agricultural problem under the three heads, Sir George Schuster has unwittingly created a misunderstanding as to the true nature of the problem we have to tackle. Not that the raising of prices or an expansion of the markets is not necessary or less desirable, but they are not quite so relevant to the problem of rural indebtedness as Sir George must have led many to think.

* * *

Our solution to the problem of rural indebtedness has been stated so often in these columns that in this context we propose to do no more than make a brief reference to it. Our views are founded on the following fundamental principles: (1) that a debt which outlasts the solvency of the debtor is thrice cursed and must be wiped out ; (2) that normally land must be held by those who have held it in the past and, presumably, know better how to cultivate it than their moneylenders or any other class of society. We trust there are not many who will demur to the first statement. A person loaded with debts he cannot pay is no good either to himself or to his creditor or to society at large ; in fact, he is a drag on all. The abolition of the debt would be a distinct gain to one and all, the creditor will have a better estimate of his worth ; and the debtor can serve himself and society more efficiently than ever before. And no one would say that in allowing the abolition of such debts the creditor is showing an unpractical altruism.

* * *

But it still remains to enquire whether in the case of the large mass of cultivators, the process of insolvency should end in their dispossession of their land. Here let us emphasise that the larger public interest rather than justice to individuals should determine the character of our measures. No one can contemplate with equanimity the prospects of the large mass of rural cultivators being rendered landless and houseless by our attempt to rid them of their indebtedness. Thus clearly, a special insolvency law to be administered in conformity to principles of general equity rather than rigid written law and accomplishing its purpose through a number of *ad hoc* tribunals, scouring the whole country, is clearly called for in this instance. Both the Labour Commission and the Banking Enquiry Committee pointed to such a solution though in more attenuated terms than we have employed in this article. And we should on this occasion urge that the abolition of rural indebtedness is the beginning of all rural reconstruction. We reckon that the effect of this clean sweep in the minds of money lenders will be so far from transitory that for a decade or two we could rely on the cultivator being safe from the uneconomic borrowing which cramped and nearly ruined him in the past.

* * *

This period would afford the most valuable respite for weaning the agriculturist from his uneconomic habits and for other and more constructive work. If prices are raised, the cultivator would experience an inflation of profit, which is the most creative force in individualist economics. Co-operative organisations could be multiplied and strengthened, for they would be functioning amidst a mass of members who no longer borrow to repay interest on old debts or to balance a domestic budget of chronic disequilibrium. Schemes of price fixing for agricultural produce could work more smoothly, for the harvest would then be the unencumbered property of the cultivator, which he could hold in anticipation of better prices. Industrial development would be rendered easier, as the agriculturists would have a definite purchasing power and

agriculture and industry would move forward hand in hand. We wish the Provincial Governments' Conference all success in the consideration of their ambitious agenda. But we trust they will not, in their attempt at comprehensiveness, consign so colossal a problem as that of rural indebtedness to a minor position.

OIL IN TROUBLED WATERS

Mr. Nalini Ranjan Sarker is well-advised to take the earliest opportunity to pour oil on the troubled waters of inter-provincial politics. From the announcement of the Budget proposals, Bombay has held the stage for agitation against the excise duty on matches and the allocation of a portion of the jute export duty to Bengal. And the opinion was unanimous that this time Bombay's flair for propaganda had urged her on a dangerously mistaken path. There was a distinct feeling of revulsion at the thoughtless impetuosity with which Bombay set out to force a straight issue between herself and Bengal. Considering that the beginnings of the Bombay-Bengal controversy were made in this province in connection with the renewal of protection to the cotton and the iron and steel industries, one would expect that Bengal would have replied with an even more recriminatory and vituperative agitation against the Western Province. One saw the signs of such regrettable developments. And it is heartening to think that as President of the Bengal National Chamber, Mr. Sarker has thought it his proper task to assuage the frayed nerves and disturbed temper of the commercial and political leaders in the two major Presidencies. Even more happy than the thought is its execution. Mr. Sarker has gently reminded Bombay of the support which Bengal had given in the past to the grant of protection to industries, in which she was little interested as a producer, and, in fact, she had much to lose as a big consumer. He cited figures to establish that out of the Rs. 1.8 crores of jute export duty granted to Bengal and made available by the levy on matches, Bombay would have to bear little more than Rs. 20 lakhs. At the same time, he did not omit to remind his countrymen that the talk of exploitation by Bombay is not only an injustice to the pioneer in Indian industry, but it also covers numerous national defects of Bengal on which attention should be concentrated. We do not know to what extent Mr. Sarker succeeded in striking the sympathetic chord in the minds of his fellow-members ; but it is certain that when Bengal begins to reflect on this question in the manner suggested by Mr. Sarker, she would realise that she should do her best to minimise inter-provincial rancour as well as in her own as in the interest of the whole nation.

STANDARD LIFE ASSURANCE COMPANY.

The one hundred and eighth annual general meeting of the Standard Life Assurance Company was held in London in February end, Mr. J. C. Campbell, the Chairman of the Company, presiding. The President, in his speech, briefly dealt with the present financial and economic situation of the world, before dealing with the performance of the Company during the past year. He said that many branches of industry showed marked improvement in trade during 1933. He was of opinion that the improvement in industry that has shown itself could not be ascribed to any single cause but that it might in general be due rather to the ordinary working of economic laws than to artificial measures. Though artificial measures have not played any major part in the revival of trade that has so far been manifest, he

Our advice cannot fail to cut down your production cost.

Follow the example of your Foreign Competitors by making use of the advice of experts in cutting down production costs and increasing efficiency.

Our 15 years of experience with the leading industries of America, Europe and India is at your service. Dozens of our clients throughout India have been greatly benefited through our expert knowledge of the Industry ; we can render the same service to you if you give us an opportunity.

We offer our expert services for the benefit of all types of Industrial enterprises, such as fuel economy in Industrial power plants, city electric supply and water works, refrigeration, air conditioning, humidification, sugar and paper mills, foundries and Engineering works, Industrial schemes, supervision, tests, appraisals and expert testimony.

believed that the policy pursued by the Government in furnishing cheap money has contributed to the improvement by fostering confidence and by enabling debts to be converted to a lower interest basis.

* * *

The New Business of the Company for the year ending November 15, 1933, at £3,640,754 showed a substantial increase of nearly £720,000, as compared with the previous year. It may be said that this is the highest recorded New Business of the Company. The considerations received for the Annuities granted during the year amounted to £945,000. The total premiums received during the year amounted to £1,270,000 and the net interest earned on its assets exceeded £1,000,000, yielding a net rate of 4¾ per cent. which is, indeed, creditable to its management, considering the conditions that prevailed in the giltedge market during the year under review. The total assets of the Company increased to £25.07 millions from £23.94 millions. The Chairman pointed out that in arriving at the market values of Stock Exchange securities, the lowest market quotation in every case was taken and said that though a further appreciation in the value of their investment holdings had taken place during the year, no credit whatever had been taken in the accounts for such appreciations, the policy in this regard being the same as has been pursued for many years. The annual valuation of the liabilities and the assets of the Company was made on the same stringent basis, the interest rate assumed being 2½ per cent., and the surplus disclosed was sufficient to declare a compound reversionary bonus of 2.1 per cent. per annum and to provide substantial sums to the inner reserves and to the pension funds. The maintenance of this high rate of bonus, the Chairman rightly pointed out, was due in a large measure to the cautious and conservative policy, pursued by the Directors of the Company for many years, of transferring a portion of the profits to the reserves. This year the Company allotted out of the surplus a sum of £85,000 to the inner reserves and a sum of £15,000 to the staff pension fund. The Chairman also suggested that this high rate of bonus could be confidently expected for many years as the complement of the Company's conservative financial policy.

* * *

The above facts and figures are enough to prove that the "Standard" stands for solid and sound life insurance business. We have not yet received the full accounts of the Company for the year, and the writer of the Insurance Section will review the figures in detail as soon as they are available.

SUGAR

Mr. M. P. Gandhi is to be congratulated on his timely publication, *The Indian Sugar Industry: Its Past, Present and Future.* Sugar manufacture has loomed large in Indian economy in recent years; and there was every need for a book dealing comprehensively with the problems, present and prospective, of an industry which has made rapid headway and which has, for that very reason, given rise to important, far-reaching and even controversial issues. Mr. Gandhi tackles the varied issues with knowledge and without bias. Above all, the sequence is well-kept and the presentation simple and arresting. Two contentious topics touched on in the monograph refer to the Indian production of sugar in relation to consumption, and the imposition of the excise duty in the last budget.

* * *

Mr. Gandhi estimates the total production of sugar in India to be 10,50,000 tons in 1933-34 and 11,50,000 tons in 1934-35; and his estimate is much in excess of that given by the Sugar Technologist of the Government of India, whose figures were 8,86,000 tons for 1933-34 and 9,40,000 tons for 1934-35. At the same time, Mr. Gandhi does not share the opinion of the Sugar Technologist that the consumption of sugar will continue to remain at the present level. He assumes that India will be consuming more sugar

(1) as a result of improvement in the economic conditions and the lifting of the present depression;

(2) as a result of consumption being stimulated by a fall in the price of sugar owing to increased internal competition;

(3) as a result of the replacement of gur by sugar in consequent of a change in the taste of the people; and

(4) as a result of the use of sugar as an industrial raw material.

* * *

Mr. Gandhi is also of the view that India might be able to export sugar to foreign countries if the cost of production is reduced to about Rs. 3 per maund, which can be achieved by increase in efficiency of mills, larger recovery of sugar, increased yield of cane etc.

It is noteworthy in this regard that while provinces like the U. P. and Bihar are certainly overcrowded with sugar factories, there is yet ample scope in the Punjab, Madras, Bombay and Bengal. The latter provinces are quite congenial for the growth of sugar-cane and command extensive markets. The aim should be not only that India be self-contained as regards sugar but that as many provinces as possible should be able to supply their requirements from their own production.

* * *

In view of the developments thus foreshadowed, the imposition of the excise duty in the last budget will be felt as a hardship, especially by those provinces which have yet to take the necessary measures for the instalation of an adequate number of sugar mills. The Provincial Councils of the U. P., the Punjab and Madras have disapproved of the excise duty as they are apprehensive that it will jeopardise both agriculture and industry. The case for maintenance of the present measure of protection to the sugar industry is convincingly made out in Mr. Gandhi's book, which should be instructive and useful alike to those who are connected with the sugar trade and those of the general public who are certainly curious to know the *pros* and *cons* of the problems that arise in connection with the changed attitude of the Government towards the sugar industry.

NOTICE

Due to the Easter holidays, there will be no issue of "Indian Finance" next week.

The "Industries Supplement" for March will, however, be issued in the midweek.

As and from March 1, Mr. M. E. Brett has ceased to be the Bombay Representative of "Indian Finance". All subscribers and advertisers are requested to address their commuunications and forward their payments direct to the Calcutta office.

Managing Editor,

ALTERATIONS IN TIME TABLE FROM
1ST APRIL, 1934.

A revision of the passenger train service will take effect from the 1st April, 1934. Details will be found in the revised Time Tables available at Bookstalls and at Booking Offices where Bookstalls do not exist. The more important alterations are as undernoted:—

1. Nos. 11 Up and 12 Down Express trains will run through between Howrah and Allahabad via Janghai replacing Nos. 67 Up and 68 Down between Moghalsarai and Allahabad.

2. Nos. 27 Up and 28 Down passenger trains will be extended to run between Allahabad and Benares Cantt.

3. The light train service between Ondal and Barakar will be extended to and from Dhanbad as under:—

271 Up.	273 Up.				272 Dn.	274 Dn.
	20.40	Dep.	Ondal	arr.		18.28
...	21.17	Arr.	Asansol	dep.	...	17.50
14.31	21.27	Dep.		arr.	13.00	17.40
15.08	22.03	Arr.	Barakar	dep.	12.27	17.07
..	22.05	Dep.		arr.	12.25	...
	23.01	Arr.	Dhanbad	Arr.	11.37	...

4. (a) 59 O. S. and 56 O. S. Passengers will be extended to run between Ondal and Rampore Haut.

(b) An additional Train each way will be introduced between Suri and Sainthia.

5. An additional train each way will be introduced on the Naihati Branch.

6. 1 L. D. Up and 4 L. I. Down Passenger trains will be extended to run between Dehra Dun and Najibabad.

7. Nos. 605 Down and 606 Up G. I. P. Railway Passenger trains will be extended to run through to and from Lucknow replacing No. 4 C Down Express and No. 7 Up passenger trains.

8. Nos. 81 Up and 82 Down Parcels Express trains will carry all classes of passenger traffic between Moghalsarai and Delhi.

What is a fad?—asks a Correspondent who, in the same breath, furnishes an answer to his own query. "A fad may be defined as anything that is repeated thrice or more in successive issues of *Indian Finance*, or in different sections of the same issue, or in different contexts in the same section." As illustration of this definition, a long list of the fads associated with *Indian Finance* is given, of which I single out the following as typical of the Correspondent's point of view:

(1) Supreme Economic Council.
(2) Economic Planning.
(3) Open Market Operations and Debt Redemption Fund.
(4) Silver Sales and Contraction.
(5) Scientific borrowing policy.

The latest fad, according to the writer, is the plea urged in our columns for expansion of currency by transfer of surplus sterling assets to the London Branch of the Home Treasury. "You wrote on this theme," concludes my Correspondent, "in the money market section a fortnight ago. That is for the bankers. You wrote last week in the Editorial section. That is for the pedants. Can't you revert to it in your Gossip of this week? For one thing, if an idea were to be beaten to death, let it meet its end with a touching epitaph in Eavesdropper's characteristic obituary style. For another, the Gossip is the one section where the layman seems to recognise familiar objects. May not we, the uninitiated in the rites and mysteries of finance, know in intelligible language what is all this unending talk about expansion?"

* * * *

It were best that I do not allow myself to be provoked by the banter of my Correspondent into reciprocal badinage. No one writes to me except in saucy style. That has been the vogue for a long while ; and I do not know if I do not like it. Perhaps, it is the best compliment that it is in the power of my readers to pay me. I would, therefore, proceed, direct and straight, to the business part of the communication. And the task set to me is the exposition, in popular language, of the purpose, meaning and occasion of currency expansion.

If trade is brisk, the more numerous transactions induced by a larger trade would, in most part, be adjusted by cheques ; but the minimum of currency notes, for which there is ever a demand, would be proportionately higher. As between banks, and as amongst the clients of each bank, the turnover will be of vaster dimensions ; and currency notes will also have to be supplied in bigger proportions. The sole authority for the supply of currency in India is the Government. If, for any reason, the latter do not increase the available quantity of currency in proportion to increased demand, the demand for such currency as there is will be all the keener. The keener the demand, the greater the price that has to be paid for currency. In simple terms, money in such conditions will be commanding high rates ; and the money market will experience severe stringency. If the volume of currency is less than the needs, there will be acute pressure in the monetary world. Conversely, if the supply of currency exceeds demand, money will be a drug in the market. It will go abegging, as they say. The function of the currency authority is to preserve an equilibrium between supply of, and demand for, currency. Plethoric money is unhealthy as stringent money is a severe strain and stress. The Golden Mean is at once the ideal and duty of the authority in charge of the note issue.

* * *

If this duty were shirked, if this ideal were not adhered to, what happens? If money is tight, borrowers will be obliged to pay high rates for accommodation. The charges on loans will become onerous. People, who hold stocks, will find that the expense involved in keeping them by recourse to borrowed money is a serious risk ; they will, therefore, be inclined to dispose off stocks. This would bring down prices of commodities. Stringency in the money market will thus be directly responsible for lower values in commodity markets. The reaction on the exchange market is of a different description. Firstly, the availability of a higher interest rate on loans advanced in India will induce exchange banks to bring in foreign funds (if the money rates in foreign centres are lower) and employ them in this country. Transfer of money from foreign countries to India means sale of foreign currencies and purchase of Indian currency. Anything sold declines in value ; anything bought appreciates in value. As the Indian currency is being bought against transfer of overseas funds to India, the rupee must appreciate. In plain language, exchange goes up. Stringency in money means, therefore, lower commodity prices but higher exchange. Secondly, as prices for commodities in India will be lower, foreign buyers will find it cheaper to buy them. Exports from India are thereby induced. Exports mean that foreigners have to sell their currency and buy Indian currency. That is, exchange will go up.

Conversely, cheap money means higher commodity prices and weaker exchange. What is needed is even money conditions, stable commodity prices and balanced exchange.

Even Sir George Schuster in his heart of hearts will admit that the exchange value of the rupee at 1s. 6d. is unduly high. I know, as a matter of fact, that the Government were, at one stage, prepared to con-

sider favourably a reduction of the ratio to 1s. 4d. if only the depreciation-enthusiasts would not take that as a hint to demand reduction to 1s. or something even lower. Sir Basil Blackett, the author of the eighteenpence ratio, will be the first to change it if he were the Finance Member to-day. He, who proclaimed the virtues of a stable ratio in 1927, is to-day blaming the world for making stability of exchange a fad. Sir George on retirement will, I hope, be equally sincere and outspoken. For the moment, he has to whip himself up into indignation against those who say, as Sir Basil did not in 1927-28 and does in 1933-34, that no particular ratio need be unalterable and that eighteenpence must certainly be changed. In his indignation, Sir George has attributed sinister motives to all those who differ from him ; all his opponents are gamblers ; he alone is the one disinterested supporter of a sane currency policy. We need not participate in this unseemly pastime of attributing unworthy motives ; for, we can well realise that, in his position, the eighteenpence ratio is not the only indefensible topic for which he has to put up a stout defence. Anyway, verbal defence has been easy enough in an Assembly like the present one. Defence of the ratio in the practical conditions of the market has not been so easy.

* * *

A high rate could be maintained, as could be gathered from the description I have given, only by the inducing of conditions in which the local currency meets with continuous demand. Such demand for the rupee can arise either if there is a substantial export surplus or if money rates are kept high in India. The position is complicated if the demand for currency against export surplus is negatived by sale of currency induced by flight of capital. In such a situation, the only way of propping up a high ratio is by bringing about a severe form of monetary stringency. Since the enthronement of the eighteenpence ratio eight years ago, the policy of the Government has, on most occasions, been directed to the creation and fostering of tight money in India. Pressure for credits can result from (a) Government taking away large-scale funds from the market by short-term Treasury Bills and long-term loans ; (b) offering higher and higher rates on Government borrowings ; or (c) contraction of currency. It was, therefore, no matter for surprise that since 1927 the floating debt went up by leaps and bounds till the colossal total of Rs. 83½ crores was reached in the summer of 1931 ; the borrowing rate on Treasuries went as high as 8 per cent. ; the borrowing rate on loans rose from near 4¾ per cent. in 1927 to 6½ per cent. in 1931 ; and free and frequent recourse was had to contraction of currency.

Currency was thus contracted to the extent of Rs. 29.25 crores in 1927-28, Rs. 4.10 crores in 1928-29 and Rs. 32.41 crores in 1930-31. In 1929-30, there was, on balance, a small expansion of Rs. 1.90 crores, accounted for by the adventitious flow of gold into reserve to the amount of Rs. 2.45 crores. In the six months preceding the abandonment of gold standard in September-end 1931, the total contraction in 1931-32 came to Rs. 26.87 crores. The net contraction between April 1927 and September 21, 1931 was, therefore, Rs. 90.73 crores. If allowance be made for the gold inflow from South Africa in 1929-30 owing to special factors, and for the distress gold receipts of 1931, the total contraction would come to nearly Rs. 100 crores. Such was the past record of the Government in the matter of currency supplies! Such was the price which India had to pay for an artificial ratio!

* * *

To a Government ruthlessly committed to the ratio and callously indifferent to aught else, monetary stringency has no terrors ; it occasions no qualms of conscience ; contraction has become second nature. So long as exchange is maintained, nothing else matters. This is the be-all and end-all of Government's policy. In the period of relaxation afforded by the fortuitous circumstances arising from England going off the gold standard, expansion of currency became unavoidable. With Bank Rate reduced in quick succession in England, it was also found possible to lower the Official Minimum in India. But during the six months when our authorities were in an expansive mood, they were only mildly and hesitantly expansive. Ruthless borrowings characterised the bout of contraction ; caution was the keynote in the era of expansion. Contraction came natural to them ; expansion looked like something totally foreign to their nature and repugnant to their cherished ideas. This accounts for the reversal of the expansion policy within a few months of the fateful day in September when Sir George learnt from a Reuter's message that sterling would no longer be linked to gold. In this connection, there has been actually no contraction in 1933-34 ; but the remittance programme has been used as a device for the enforcing of the deflationary policy.

* * *

This kind of attitude on the part of the Government is nothing new or strange. In earlier years, they used silver sales for insidious and concealed contractions of currency. Remittances are now put to a like use—I would rather say, a like abuse. In regard to silver sales, each sale means the materialisation of a deficit between the book value of silver and the realised value ; towards this deficit, it was the practice of the currency authorities to wipe out a corresponding portion of *ad hoc* securities. It was *Indian Finance* that pointed out the recurrent contractions that were taking place in relation to each silver sale. They were not easy to detect and added greatly to the mystifying character of the many mystifying transactions that are recorded in the Paper Currency Reserve statement. The Finance Member was pulled up about this in the Assembly and he gave the assurance that silver sales would no longer be used as an aider and abettor of currency contraction. We hope the Assembly will, on the present occasion, achieve equal success in getting an assurance from the Finance Member that Treasury remittances to the India Office will not be conducted in such a way as to result in deflation.

The position in this regard is simple. The Government claim to be under a *de facto* commitment to sell sterling at 1s. 5 49/64d. so as to prevent exchange from going below this point, and to buy sterling at 1s. 6 3/16d. so as to arrest exchange from soaring higher. These are the two legal obligations definitely connected with two specified rates. In between, the Government are at liberty to buy sterling in so far as they have to remit funds for the requirements of the Secretary of State. To the extent that these remittances are necessary, it will be necessary for the Treasury to come into the market and buy sterling at rates lower than 1s. 6 3/16d. For 1933-34, the budget as announced on February 28, 1933, provided for a remittance programme of £21 million. Thanks mostly to gold exports, the Government have been able to remit slightly more than double this amount. The revised budget estimate, as announced last February, estimated total remittances for the current financial year at £37.46 million. The revised estimate has already been exceeded ; up to March 17, the total sterling purchases came to £42.24 million. To this must be added £1 million bought this week on the tender day. There is yet another tender day. There

is also the possibility of some intermediate sterling purchases at the tap-rate. The actual remittances for the fiscal year may, therefore, be in the neighbourhood of £45 million. In other words, the Government have remitted £24 million in excess of the original programme. This means that the balance of the Treasury in London has increased by £24 million while the balance in India has been depleted to the amount of Rs. 32 crores. Commonsense suggests that the ideal solution of such a development in the ways and means problem would be to utilise somehow the excess balance in London for creating a corresponding balance in India and thus causing an automatic replenishment. The P. C. R. has two branches, one in London and one in India. This kind of automatic replenishment is made possible by the presence of the two sections of the reserve. All that has to be done is the deposit of surplus sterling assets in the London branch and the issue of currency thereagainst from the Indian branch. If this is not done, the resultant position will be that the Government will have to find some other ways of making up the shortage in their cash which, in the present year, will amount to Rs. 34 crores.

Among the other ways open to the authorities in this connection are increased borrowings in the form of Treasury Bills and substantial loans from the Imperial Bank on ways and means account. By taking away more money from the market than they need, the Government denude the market of funds without any adequate cause. By having recourse to the Imperial Bank for ways and means advances, they cause a heavy decline in the cash percentage of the Bank and thus act as a restraining influence on the Bank's credit policy. These two factors are responsible for maintaining money rates at a high level in banking circles, for making the Imperial Bank returns give an impression of stringent money conditions, and for standing in the way of the Bank reducing the Bank Rate which it may otherwise have done. Is there any sense in the Government having £24 million lying idle with them in London while they pay a fairly high rate for their needs in India?

* * *

The Imperial Bank cannot escape blame in this matter. The latest return of the Bank shows investments in government securities at Rs. 50.23 crores; over and above this, the Government have taken a ways and means loan of Rs. 7.00 crores. The total of Government obligations will thus amount to Rs. 57.23 crores. Of the Rs. 50 and odd crores invested in gilt-edge, we do not know how much represents loans and how much Treasury Bills. But I will not be surprised to learn that a third of the total is in the form of Treasuries. This means that in the floating debt of the Government, which amounts at date to about Rs. 37 crores, the Imperial Bank's share is no less than Rs. 25 crores. This is an altogether unhealthy state of affairs. Either the Bank should reduce its total outlay in gilt-edge holdings or it should hold a much smaller proportion of the floating debt. A situation in which the major part of the floating debt has to be financed by one single institution must be considered artificial in the extreme. Taking into account the trade advances made by the Imperial Bank, there is no warrant for so low a cash percentage as is now shown in the Bank's return.

* * *

It is this low cash position of the Bank that accounts for the persistence of a feeling of dear money in market circles. That the Government are deliberately refusing to expand currency is due, presumably, to the tradition that has come to be established in the matter of currency administration. It is time this tradition is thrown overboard. What justification is there for a 3½ per cent. Bank Rate in present conditions of trade in India? Why should inter-bank call money be scarce in supply and dear in rates? It is the machination of Government's currency operations. The most straightforward course in the circumstances is to utilise the extra balance in London to create a corresponding balance in India. I hope the Government will do something in this direction before the close of the financial year. A careful study of the ways and means proposals contained in the last Budget leads me to think that provision is made therein for an expansion of currency to the amount of Rs. 2 crores. In addition thereto, there should be expansion against the excess of actual remittances over the revised remittance programme. This will amount to another Rs. 10 crores. There can be no justification whatsoever for withholding currency supplies for an extra amount of Rs. 12 crores before the fiscal year draws to a close. Exchange is well able to look after itself without this prop of deflation. What is urgently needed is the inducing of higher prices for commodities. No movement in this respect can be hoped for till the contraction complex of the authorities yields place to an expansion complex.

(From Our Correspondent)

Bombay, March 20.

The coincidence of Lord Brabourne's return from Delhi with the annual meeting of the Bombay Chamber of Commerce has naturally given rise to authoritative pronouncements on matters of vital concern to Bombay. Though normally one may not feel quite happy at the undue attention bestowed by heads of Governments on European commercial bodies, one must admit that on this occasion Lord Brabourne's opening of the annual meeting of the Bombay Chamber has been useful in letting the public know the extent to which the Government sympathise with the recent demands of the commercial community in this city. This the new Governor has done, with a freedom which is unknown to official circles and as refreshing as it is innovatory. The usual procedure for a provincial government in circumstances like the present is, perhaps, to stress in public their subordinate position to the Government of India and at the same time press the demands in confidential correspondence. I find that in the Madras Council's debate on the excise duty on matches and sugar, Sir Hopetoun Stokes, speaking for the Government, has taken a similar position. Not for Lord Brabourne, the ways, of a civilian of thirty years' standing. The new Governor had no hesitation in saying:

> "As soon as Sir George Schuster's budget speech was published, my Government naturally lost no time in pressing this view once more upon the attention of the Government of India, and, as I myself happened to be in Delhi while the subject was being discussed in the Legislative Assembly, I naturally did what I could to support our case by private discussion with the representatives of the Government of India."

And again:

> "The Bombay Government are naturally entirely in agreement with the view you have taken of the proposal in the Budget recently presented by Sir George Schuster in the Indian Legislative Assembly to give this Presidency no share of the additional resources to be made available by the imposition of an excise duty on sugar and match. This additional revenue is to be utilised entirely for the purpose of remitting to the jute-growing provinces, mainly Bengal, one half of the export duty on jute."

The bitterness noticeable in the reference to Bengal is even more explicit in what follows:

> Bombay has always claimed that this Presidency suffers equally with Bengal from the maladjustment of the Meston Settlement, and has always held that the fact that, by her own very considerable exertions and sacrifices, she has kept within manageable limits the difference between her expenditure and her revenue, should not afford ground for refusing to give her, equally with the other industrial provinces, the benefit of any assistance which the Government of India were able to provide.

Who can say that Lord Brabourne is not right in making this dignified protest against the attempt of the Government of India to set a premium on improvidence and penalise prudence? Half the trouble of inter-provincial squabbles would be over, if the heads of provincial governments would drop their reticence and make the Government of India feel that in matters like these they are not dealing only with a public too used to cry in the wilderness to mind another disappointment.

Equally impressive was Lord Brabourne's vindication of his visit to Delhi the insinuations against which I referred to at some length in my last week's letter. His Excellency said:

> I am extremely sorry to see that there has been a tendency in Bengal to take exception to this very natural desire of ours to do all we could to ensure that the Bombay case did not go by default. I see that in some quarters there has even been an attempt to attribute a sinister significance to my own visit to Delhi, and to say that it was arranged at short notice for this special purpose. The invitation to me to visit the Viceroy's House was given by Lady Willingdon some time before I had even seen the shores of Bombay.

Of the upshot of his visit to Delhi, Lord Brabourne said but little, for the simple reason that there was not much to say. There is no doubt that the new Governor takes the most serious view of his responsibilities. Within a few months of his arrival here, he has been confronted with such sensational developments in the financial and commercial position of the province and the City as might un-nerve a lesser man. He has the whole of his term of office before him; and he could hardly regard with detachment the prospect of starting his regime with the hopes of balanced budget dispelled even as they are formed. Lord Brabourne was, therefore, somewhat sarcastic when he said:

> Our friends in Bengal, however, need not have disturbed themselves unduly, for I am afraid that all the representations we have made to the Government of India seem unlikely to obtain for us anything more tangible than an expression of sympathy.

Mr. Lely, the President of the Bombay Chamber, had in the main to go the same ground over again. He naturally devoted much attention to the problem of diversion of trade, and particularly to "the severe and uneconomic competition offered by the maritime states of Kathiwar". He cited figures to show the rapidity with which the export trade of the Kathiawar ports has increased during the last three years. The increase in the first quarter of each financial year is as below:

1931	... ...	Rs. 13,61,000
1932	... ...	,, 14,22,000
1933	... ...	,, 97,22,000

Practically the whole of this enormous increase is due to shipments of raw cotton which have gone up as follows:

1931	... ...	Rs. 33,000
1932	... ...	,, 4,01,000
1933	... ...	,, 84,17,000

Mr. Lely is, perhaps, the first to point out that a large import trade must, apart from the actual developments tend to a corresponding export trade as "the tendency will be increasingly to provide vessels, after discharge of their imports, with outward cargoes, too". Mr. Lely made no general charge of malpractices against these States; in fact, he went to the length of admitting the probability that some measure of injustice had been done to them, and particularly Bhavnagar. At the same time he clarified the issues innvolved;

> Attention is liable to be focussed on this State, as it surpasses in the volume of its imports all the rest of Kathiawar together, while the treaty rights which it enjoys are unique. The other States are required to levy import duties in accordance with the Imperial Customs tariff, but are entitled to retain the tax collected in respect of goods consumed within their own territory. Bhavnagar alone possesses what must now appear the fantastic privilege of keeping the duty to herself, even though the goods cross into British India.

The solution is simple, a revision of the Treaties; and no reasonable person would maintain that a treaty made seventy years ago, when import duties were non-existent, or so light as to be almost negligible, may not properly be subject to revision in the entirely altered conditions of to-day.

Mr. Lely expressed his regret that the attempts of Bombay to secure there cognition by the Central Government of her claims to a more equitable financial settlement have been misunderstood in Bengal. Mr. S. A. Halsall, the Vice-President of the Bombay Chamber spoke in support of the demand that the customs duties should be assessed not on the Government's conception of the "market value" but on the actual cost of goods to an importer. But he pointed out that the difference in practice in this regard has also contributed its quota to the diversionn of trade from Bombay to the ports of Kathiawar. Altogether, the proceedings of the Annual Meeting of the Bombay Chamber of Commerce, excepting for the reference to the White Paper and the demand for a second Chamber in Bombay constitution in the future, have strengthened the hope that in course of time there must be a more substantial identity of interest between the European and Indian commercial communities in India and particularly in this city.

It should be obvious to the most superficial observer of the current trend of opinion in Bombay that there is a growing and well-nigh irresistible demand for the revision of the treaty between the Government of India and the States of Kathiawar, regarding the rights of the latter to the collection and retention of customs revenue levied at their ports. It has been already pointed out that, while the other States are at liberty to collect the revenue and retain it, in so far it is derived from imports consumed within their territory, the State of Bhavanagar has been accorded the unusual privilege of retaining customs duties even on those goods which pass beyond their boundaries into British India. It has also been freely suggested that there has been a very considerable trade in smuggling and that coming on the top of an uneconomic competition between the ports of Kathiawar and the port of Bombay, it amounts to a crushing handicap on what is, perhaps, the most important port in India. The Viugram line is also not properly guarded. In these circumstances the solutions are obvious. There should be a revision of the treaties, and in order that such revision may be made without unfairness to any of the parties or interests concerned, it is well that such revision should follow a complete enquiry into the whole question by a properly constituted commission. The *Times of India* has lent its support to this demand. Another minor reform suggested by the present state of affairs is that the Central Government should claim and acquire for themselves some kind of supervision of the administration of customs in these Native States, if not direct control through the Imperial customs officials.

The week has shown no marked accentuation of labour troubles in Cholapur. Attendance has improved somewhat, and no serious outbreaks are reported. An important development is the initiative taken by the Municipal Corporation in attempting a settlement of outstanding questions. If the report is true, as it is very unlikely, that the strikers do not know their minds, and that the strike is due not to the desire to secure specified advantages, but to the aimless malignity of extraneous leaders, the Municipal Commissioners who exert themselves in this behalf will naturally have nothing to work on. But it would appear that the strikers have got specific demands to make, whatever their justification and equity may be. So far as the Municipality is concerned, it is encouraging to find that the discussions centre on the question of the formation of a neutral conciliation board to act as mediator between the mill management and the strikers with a view to explore all avenues for an amicable settlement on the question of a 12½ per cent. cut in wages effected from January. There is also the question of the recognition of the local union in which employers would seem to have assumed a somewhat stiff attitude. Meanwhile, attempts are being made to form new labour organisations with more intransigent demands. Those who have been asked by the Municipality to bring about a conciliation are of the view that the labourers should be first approached and their views ascertained before attempting to bring them together with the representatives of the employer.

A matter of equally economic and epicurean interest is the proposal to hold an all-India, Mangoe Show in which all the choice varieties of Indian mangoes will be exhibited. The fruit dealers have been hit-hard during this season; as Alfonsos, which used to fetch fancy prices in the boom days and even last year, were sold at Rs. 5 or Rs. 6 per dozen, are now untouched at Re. 1/8 per dozen. The fruit interests seem to believe that their prospects would improve if a system of auctioning were introduced; and they are, therefore, organising themselves to secure the requisite facilities. But for the average man the most predominant thought is that not only Alfonsos are cheaper but other varieties also will soon be available to afford variety to the fastidious palate.

PUBLICATIONS OF THE LEAGUE OF NATIONS

Just out WORLD ECONOMIC SURVEY, 1932-33

348 pages ... ... Price: bound in cloth Rs. 5 8 0

The Survey for 1932-33 begins with a description of the revival of economic activity in the autumn of 1932 after the Lausanne Conference and covers the period up till the close of the first session of the *Monetary and Economic* Conference at London twelve months later. The story is thus brought up to the end of July 1933.

As in the previous Survey adequate use is made of statistical information regarding prices, production, international trade, public finance, wages, employment, profits, etc. collected from all over the world by the Economic Intelligence Service of the League of Nations. Despite the wealth of material thus made available, the Survey, like its predecessor, is a clear and connected story of recent developments valuable to the specialist for its scope and accuracy, and equally to the layman because of its clarity.

The American banking crisis, the movement towards reduction of hours, the situation regarding international indebtedness, the magnitude of agricultural stocks compared with current production, the decline in international trade, the recent rise in prices and recovery of production, are among the subjects of topical interest surveyed in this volume.

WORLD PRODUCTION AND PRICES, 1925-32

155 pages ... ... Price: Rs. 2 12 0

This volume contains an analysis of the changes in the world output and stocks of raw materials and foodstuffs, in the world's industrial activity and, finally, of price movements and relationships. It includes the index number of world production of raw materials and foodstuffs calculated by the Economic Intelligence Service of the League and international index of industrial production, together with abundant statistical material, *e.g.*, national industrial production indices for some 20 countries, data comparing production of investment and consumers goods, and indices of activity of some 15 important groups of industry in a large number of countries.

The chapter on prices contains an analysis of the movement of wholesale prices in various groups of countries; comparisons are made between the evolution of gold and sterling prices, raw materials and finished products, international and domestic goods, investment and consumption goods, etc.

The chapters on production cover the years 1925-1932, and, where possible, the first quarter of 1933. *The discussion* of price movements has, where figures were available, been brought up to May, 1933.

(From Our Correspondent)

Madras, March 20.

In India as she is to-day, it is farcical to talk of the achievements of a Ministry or its enjoyment or lack of confidence in the Legislature ; and yet the local Council found itself discussing these self-same questions on a cut motion moved by Mr. Basudev on March 16. One who knows the position of the parties and leaders here will hardly need to be told that the whole discussion was altogether devoid of life or reality. There are very few who can put in some zeal or fervour in their attack against the Ministry. And these, perhaps, chose to keep away, with the result that it was one hymn of praise to the Ministry with a little variety in tone and key. The debate by itself is of little importance except as posing a constitutional problem which, so long as we have no complete autonomy, must be considered to be of vital importance. And the question is, in short, what is the responsibility of elected ministers working in collaboration with official members in the Government to their Party in the Legislature and to the country at large? The Ministers here have made the comfortable assumption that their responsibility in matters, which concern the reserved half and over which the Government and the Legislature are at variance, amounts in practice to nothing. As a statement of the legal position, it is, of course, unexceptionable. That is, the Ministers have no right to remonstrate to their colleagues or to the Governor on matters which do not concern the transferred departments. But it is difficult to believe that the constitutional position is identically the same. There must, in the nature of things, be a shade of difference between the law and the constitution ; and regarded constitutionally, the Ministers are chosen from a party which is in a majority in the Legislature and they must, in all matters, reflect the opinions of the majority. It is not as if the popular party in the Legislature elects a number of non-official civil servants to assist the Government in the administration of the transferred half. And no minister with any sense of how he derives his position can be content with saying in defence of his apathy to popular demands that the matter does not pertain to the transferred half.

From the standpoint of the country as a whole, the interesting feature of this week's proceedings in the Council is the motion of Dr. Subbaroyan urging "that this Council is of opinion that the imposition of an excise duty on sugar and matches is undesirable and that it is prejudicial to the interests of the province." Coming after similar resolutions in the Bombay and Punjab Legislative Councils, it is certain that the significance of these resolutions, as evidence of deep-seated opposition in the country to these measures of Sir George Schuster, is considerably enhanced. May be, the present Assembly is too spineless even to act on the strength of such backing from their provincial councils. But there can be no mistaking the fact that none of the provinces, except perhaps Bengal which stands to gain by the levy of an excise duty on matches, has taken kindly to this attempt to handicap the growing industries of India. Though Dr. Subbaroyan's motion only gave expression to a very popular standpoint, discussion was on the whole maintained at a high level. The point of view which found favour with most of the speakers was that the new excise duty on sugar would not only go to retard the development of the units that have already been established, but it would prejudice the interests of the agriculturist who is slowly waking up to the advantage of growing sugar in preference to rice, the prices of which have gone down to dead low levels. In fact, the legislators are practically unanimous in the feeling that a flourishing sugar industry might prove to be the source of much-needed help to the agriculturists.

But by far the most valuable observations on this motion were made by Mr. F. Birley. Mr. Birley took the view that "the imposition of an excise duty at the rates now proposed was undesirable and prejudicial to the interests not only of this province but probably of the whole of India." He urged that the extent of protection recommended by the Tariff Board should be assured to the industry. It is well, Mr. Birley said, that consideration has been given to the fall in the price of Java sugar. But the fact that molasses has proved to be of no value whatsoever has been overlooked in calculating the cost of protection. And he, therefore, urged that it should be a perfectly simple matter to adjust the excise duty from Re. 1-5 down to the figure that it should be, assuming that molasses has no value. He suggested that the fall in revenue, that would be caused by a reduction in the excise duty, could be made up by applying the excise duty equally to *khandsari* sugar as to factory sugar. Another important point that he urged was that while it may be true, as is urged by the Government of India, that the sugar industry has developed too fast, the Madras Presidency had not gone on too quickly and there was no necessity to put a brake on the development of the industry in this province. Considering that the Government of India cannot legislate differently for different provinces, Mr. Birley suggests that the exemption of palmyra jaggery industry from the excise duty would give the special facility needed by Madras.

A significant disclosure during discussion of a cut motion was that Government had been indifferent to the interests of the tax-payer in regard to expenditure on the machinery and other equipment utilised in the Mettur Project. A number of issues mainly unrelated to one another were raised by the members on this occasion.

The Revenue Member had a hard task in answering so many conflicting demands. With regard to the Thungabhadra scheme he said that the Madras Government had to do it in consultation with the Governments of Bombay, Hyderabad and Mysore. And while the last two are busy considering questions, the Madras Government are carrying on a preliminary investigation of the Project, assuming that a certain amount of water would be available in order that Government might take a decided step at a later stage. As for the Godavari Delta scheme, Sir Archibald said that it would bring 30,000 acres under irrigation and it was possible to improve the drainage in certain respects. The question of the Lower Bhawani Projects gave Sir Archibald a rather uncomfortable time. He had, in the first place, to confess that the possibilities of this scheme were still being investigated. Then he had to damp the hopes, heedlessly raised in the past, that the Lower Bhawani Project might help the irrigation of wet and dry lands equally. We are now told that the irrigation of wet crops is not prohibited but that water would not be sufficient for rearing a paddy crop.

While this disappointment has, perforce, to be swallowed, it is difficult to evince the same forebearing attitude in regard to the admission now made by the Government that the machinery acquired on such a lavish scale for the Mettur Project has no chance of being utilised in the Lower Bhawani Project. The Revenue Member agreed to expedite the investigation into the Project. But to quote his words: "There is not much chance of the Bhawani scheme coming into operation after the Mettur scheme." And what is more, the Government glibly suggest that the Tanjore ryot cannot afford to keep the Mettur machinery in anticipation of the need therefor, in connection with the Lower Bhawani Project. That is, Sir Archibald's words, in short, come to this ; that when the machinery was bought the Government had no compunction in suggesting that the outlay would be well justified, inasmuch as the Tanjore ryot, who bore the burden, would be well in a position to dispose of it to the beneficiaries of the Lower Bhawani Project. And now when the time comes for such disposal, the Government's spokesman are again on their feet to throw cold water on the hopes of the Tanjore ryot and to suggest that sales at scrap prices are all that the Tanjore ryot can hope for!

OLYMPUS

(From Our Correspondent)

New Delhi, March 21.

Death has laid his hands quick and heavy. Last week it was Sir Thomas Ryan. And now it is Mr. Mackenzie in the Burmah-Shell in identical circumstances and with the same tragic suddenness. Only a few days ago Mr. Mackenzie was present at the funeral of Sir Thomas Ryan. Little could he have dreamt that he, too, was to be gathered so soon!

Mr. Mackenzie has been in the Assembly for about two years as representative of the Associated Chambers. He was to have retired two months ago; but the Assembly work made him postpone the date continuously till he fixed it for 23rd April by which time the Session was certain to be over.

* * *

The tragic event occurred too soon after the last for the Assembly to think of any other form of mourning. They adjourned for the day, though every day is a great loss, because the House is racing against time. The Finance Bill must be law before 31st March and so also the Sugar Excise Duty and the Match Duty Bills. The loss of every day means an extra strain on the House and on the Government. But an adjournment was inevitable. The next best course for the Members was to get through the other business. So they sat the whole day on the Select Committee and subjected the Textile Protection Bill to a detailed examination.

* * *

Mr. Mackenzie's successor will now be appointed by the Associated Chambers of Commerce and the Viceroy will, as usual, accept the Chamber's nomination. There was a time when the representative of this body used to be the most important member of the European group and the most hard-worked among them. The Associated Chambers of Commerce gave their representative an office staff and he worked as a full time man. Later on, however, that office was converted into the European Group Secretariat paid for by the European employees of all the mercantile firms in India. The result is that the representative of the Associated Chambers of Commerce, as such, has ceased to be necessarily the spokesman of its view point; for the party's case is argued by the leader and by others appointed for the purpose. Under this arrangement Mr. Mackenzie's duties were less onerous than those of his predecessors. But Mr. Mackenzie with his personal charm and local standing and influence as Manager of the Burma Shell and as President of the Delhi Imperial Gymkhana Club was a great asset to the party. His loss is keenly felt by all his colleagues.

The debate on the Textile Protection Bill has left certain impressions which require to be recorded. Dewan Bahadur Ramaswamy Mudaliar has been blamed for personal attacks on the anti-Mody section of the Millowners and of the Federation of Indian Chambers of Commerce. His purpose really was to make the Federation realize the inconsistency of their position in keeping out of the Assembly and yet waiting in deputation on Sir Joseph Bhore at the back door. I think the latest instance of this which provided particular provocation was the visit of Mr. Walchand Hirachand to Sir Joseph Bhore last week.

* * * *

And the reference to "vultures" had the same target in view. Possibly, Mr. Mudaliar overshot the mark; but he claims that the point went home and that the Federation should revise its policy and either throw its weight entirely with the Congress or join the ranks of the Round Tablers who believe in co-operating on the basis of the existing constitution.

* * *

It was also interesting to find two Parsee members of the House, Sir Cowasji Jehangir and Mr. Anklesaria letting down their Parsee colleague, Mr. Mody. The exact provocation is not known. Probably Mr. Anklesaria was too jealous of Mr. Mody assuming the title of Lancasaria.

The Finance Bill debates are now on. Quite a sensation was created by Mr. Joshi in demanding the presence of Government members during these debates. Treasury Benches have been empty throughout the session during most of the debates; and Mr. Joshi's private appeals to the Government Members and to the Chair have gone in vain. He planned to move a motion of adjournment if his speech was not replied to. But before doing so he raised a point of order which brought Government members to the House. How long this will have effect will be seen hereafter; but there is no doubt that the present Assembly does not command the respect of the Government; and the Chair seems helpless, to, in improving matters.

* * *

Sir George Schuster allows the Members to have their say without paying much attention. Probably he feels the story is the same, repeated a dozen times this session. But on occasions he lifts his head and nodds assent. The one occasion on which he did so was when Dr. Ziauddin Ahmed pleaded for his sugar excise duty. The learned Doctor's argument was "It is the consumer who has to pay. If he does not pay out of one pocket he must pay out of the other. Why not then sugar excise duty." Sir George Schuster nodded assent and was pleased to find a friend in one who had been such persistent critic of his during the Reserve Bank Bill debate.

* * *

I am not sure the Assembly will be able to put enough pressure on Government to revise their attitude about the sugar excise duty. I have no doubt that, if all parties make a combine, Sir George Schuster will find a reasonable solution; but if the European Group and the Bengal group keep mum as they threaten to, lest the Budget scheme is upset, then the entire budget proposals will get through unaltered. However there is chance for the Opposition to oppose, and oppose successfully. But will they?

* * *

Official decency dictated that Lord Willingdon should unveil the statue to Lord Irwin. A memorial means a tribute to the work of the ex-Viceroy. Does Lord Willingdon feel inclined to pay tribute to Lord Irwin. At any rate he had to pay it and he paid it in ample measure in his speech.

* * *

I must admire the imagination of those who chose the venue for the statue. It prances on the top of the road which links the Grand Vista with the Imperial Secretariat. It is through this road that for 21 days Gandhiji motored daily to the Viceroy's House. And Lord Irwin made history by entering into a Pact with the Mahatma. On the top of this road stands the statue, watching all those who pass it and warning them that the spirit that must be theirs hereafter is the spirit that made a Viceroy shake hands with a great Indian leader.

GREAT BRITAIN

Anglo-Japanese Trade Talks : Surplus in 1933-34 : Mr. Chamberlain's Dole : New Budget : Armament Expenditure : The Spectre of another War : The Political Tangle :

The proverbial mountain, in labour, produced a mouse. The pretentious Anglo-Japanese cotton conferences have proved even less fertile. As foreshadowed in these columns, the breakdown of the cotton talks is now inevitable.

Ostensibly, it was the "area" issue, on which the conference broke up. But it was really a conflict of vital interests. Japan, albeit a victim of divine visitations of a strange intensity and regularity, is faced with a problem of an increasing population, which she must solve. And she cannot solve it in the usual way by colonisation. The "extensive" policy of other nations, which have colonies and dominions abroad, is not suitable for Japan. She has to find an "intensive" policy which must, at the same time, be elastic. That Japan has, so far, been able to solve the problems satisfactorily to herself and without coming into conflict with other nations, is a matter over which her politicians and industrialists may well be congratulated.

But sooner or later, such an "ingrowing" nation is bound to lead to complications. After all, no nation likes to surrender one jot or a tittle, even if it be out of her bounty, to another without a struggle. Japan cannot afford to apply the reins to her world trade, any more than England can afford to burden her trade with the Dominions with any trade treaty of dubious utility.

Why, in the face of all this, the conference was held at all is a question one likes to ask. Perhaps the Japanese delegates needed a well-earned change. Perhaps, the Englishman's faith in miracles dies hard!

The Last Lap

We have been so familiar with the hollow spectacle of a balanced budget in other countries that budget problems have almost become a sort of a cross-word puzzle with us. Except for a brief flutter, when it makes its appearance, a budget, balanced or unbalanced, causes hardly any ripples on the surface of human existence in, say, Indian. But it is otherwise in England. A budget is almost a living document in Great Britain and the fortunes of a financial year are followed there with almost doting solicitude. And a spectacle of a growing surplus as the financial year is drawing to a close must be truly delightful to every Englishman.

Speculation is rife as to what the surplus is going to amount to, no less than as to what benefit it is going to confer. As to the first, it would be a safe forecast to place the figures in the neighbourhood of £35,000,000. The position in March 3 was a surplus of £6,400,057 compared with the deficit of £58,561,882 on the same date the previous year. Granting, therefore, that there are no unforeseen upheavals either in revenue or expenditure, the year 1933-34 is going to close with a surplus of something like £35,000,000.

How is this money going to be spent? There are various directions in which the relief could be administered ; and it will be interesting to watch how the Chancellor of the Exchequer is going to do the doling out. There is the Sinking Fund to be taken account of. The restoration of the "economy cuts" would be a popular change. So would six pence off the income-tax. The amount of the surplus cannot possibly be such as to enable Mr. Chamberlain to satisfy all the demands ; but there can hardly be any doubt that relief of a popular character will be embodied in the next budget. The Chancellor has already warned the country against hoping too much. But if the next budget springs a surprise, it is confidently believed that it will be on the right side.

The Army, Navy and Air Estimates

The following are the amounts which will figure in the next budget under the respective headings on the side of expenditure:

	1934	1933
	£	£
Army	39,600,000	37,950,000
Navy	56,550,000	53,570,000
Air	17,561,000	17,426,000

The Army will thus spend £1,650,000 more than 1933 and the Navy £2,980,000. The Air force will spend £135,000 more than last year and the total increase for the defence forces is £4,765,000.

Out of the hollow pretence of Disarmament talks and the weird conclave of nations, has emerged a spectre no sentient being will mistake as the Angel of Peace. It is not enough to say that the Disarmament talks have been futile. They have led, through long and toilsome years perhaps, to the prelude to war. The defence force estimates are out. If tables of figures could speak, the estimated figures would tell but one story—that Europe is getting ready for another and surely, a more ruthless war. The increase in the estimate under each head is not stupendous but the trend is unmistakable. The increase in the Air defence estimates is, perhaps, not in accord with popular opinion, which would like to see England's Air force at least on a par with that of other nations.

It is not a prophecy that the next war will be an entirely three dimensional affair—that is to say, Air offensives will play the most important part in future warfare. The superiority or perhaps the very existence of nations in the future will depend on whether a nation can resist the enormous destructive possibilities of future air warfare. It boils down to the question of who will take the first offensive. Resistance is hardly at par with the immense immobile methods of attack so that the depredations of an "Air-arm" can only be countered by an equally efficient air offensive.

Time was when England had an undoubted superiority over other nations in virtue of her invincible Navy. Poets have drawn their inspiration from this naval sovereignty of Great Britain ; but land and water have ceased to be the world's fighting ground. The immense possibilities opened up by the scientific improvements in aviation point to a future which is fraught with great potentialities for good and evil. One thing is certain,—the mask of decency is torn off the face of civilisation. It is now a case of slaughter at the quickest rate—unless world opinion is mobilised sufficiently to prevent it.

Though the armament estimates just cited may make it look farcial, it is still true that the peace of Europe, and the world, can be kept only through the mediation of Britain. No doubt, it has been so far ineffective ; and one might even wonder whether Britain ever mediated at all between Germany and France. And there is something chilling in that a Cabinet headed by one, who was once counted with Bertrand Russell in the fight against conscription, is now busy unloosing the blood hounds of war.

But there is comfort in the thought that the life of the present Government is ebbing away. British politics is, if you can overcome the disgust for that notoriously hackneyed phrase, in the melting pot. There is, in the first place, a serious intellectual dissatisfaction with the forms of the constitution. There is also a strange feeling of mingled pride and inferiority borne of constant study of the developments and achievements of Fascism on the Continent. On the one hand, Englishmen feel that their love of liberty would brook no dictatorship. And there is also, on the other, the suspicion that the absence of an outstanding personality like Signor Mussolini or Herr Hitler might point to a lack of grit in the political leaders. Likewise, they feel at one time that, whatever the magnitude and variety of the problems with which they are confronted, the robust commonsense of the nation will somehow anyhow, muddle through. At other times they feel the need for a vigorous

Air Mail Week

drive or a thorough clean-up. In such circumstances, there is a conflict of emotions and purposes whenever political ideals and policies come under discussion. This conflict might have been confined to the background but for the growing atrophy of the National Government, to which its supporters and opponents alike seem to be equally sensible. On all hands, it is realised that, in its present form at any rate, the National Government will not be able to achieve anything more.

It is not realised, except in the ranks of the opposition, that the Government must in the nature of things be incapable of doing more. For the National Government, let it be remembered, was not chosen for its fund of new ideas or new policies. At best, it showed—and even this is debatable—more determination than others to put through certain tasks which, according to the old-world notions, must be accomplished if Britain is to be deemed financially and economically sound. It came to power to "save the pound"; and this involved the preservation of a proper balance of trade and therefore the regulation of imports and the maintenance of the export trade. The former has been achieved by the simple expedient of the Import Duties Act and measures of the same kind. Exports, it is claimed, have not only been maintained, but improved upon by a number of bi-lateral trade treaties. The budget is balanced, thanks largely to the growing vogue of partial or wholesale postponement or repudiation of debt payments. And what more is there to do in this line? The Government are at the end of their tether.

The *Times* leads this campaign of diffidence in the National Government. The report of intrigues against Sir John Simon would appear to be the shadow of the coming event. The *Times* considers that the Cabinet must be reconstituted. Sir Herbert Samuel wants not only a change of Government but a change of policy, a natural enough demand for the Liberal leader to make. Mr. Garvin sings nearly the same

SOUTH INDIAN RAILWAY CO., LTD.

(INCORPORATED IN ENGLAND)

BUY COUPON TICKET BOOKS AND TRAVEL CHEAPLY

Merchants and others who travel for business or pleasure, especially people wishing to visit places of religious and historic interest on the South Indian Railway, should buy First and Second class Coupon Books.

With effect from 1st April, 1934, I and II class mileage coupon books for 1,500 miles and 3,000 miles available for three and six months respectively in local booking over this Railway (Nilgiri and Shoranur-Nilambur Railways excepted) will be issued at the following fares :—

	For 1,500 miles valid for 3 months	For 3,000 miles valid for 6 months
I Class	Rs. 115	Rs. 230
II Class	Rs. 58	Rs. 115

2. These coupons are also valid for exchange of ticket **to Madras Central Station only** for journeys by S. I. Ry. running power trains, *viz.*, the Malabar and Blue Mountains Expresses.

3. These coupons are available for use by any person whose business necessitates frequent travel. Coupon books issued to persons other than mercantile firms are valid for use only by the purchaser and coupons and tickets are not transferable.

4. Examples of savings effected by passengers in using these coupons.

Miles	FIRST CLASS		SECOND CLASS	
	Tariff fares by all trains	Coupon ticket fare by all trains	Tariff fare by Express trains	Coupon ticket fare by all trains
	Rs. A. P.	Rs. A. P.	Rs. A. P.	Rs. A. P.
100	9 6 0	7 10 8	6 4 0	3 13 10
200	18 0 0	15 5 4	11 12 0	7 11 8
300	25 13 0	23 0 0	16 7 0	11 9 7
400	33 10 0	30 10 8	21 2 0	15 7 5
500	41 7 0	38 5 4	25 13 0	19 5 4

For details, conditions etc , enquire at stations, see posters at stations or apply to the Chief Commercial Superintendent or District Traffic Superintendents for leaflets.

5. All S. I. Railway coupon books issued up to and inclusive of 31st March, 1934 are vaild for exchange of tickets over S. I. and M. & S. M. Railways in local and through booking during the period of the currency. Similarly all M. & S. M. Railway coupon books issued up to 31st March, 1934 inclusive are valid for exchange of tickets over the South Indian and M. & S. M. Railways in local and through booking during the period of their currency. No refund will be allowed on these coupons in any circumstances.

tune in the *Observer ;* though to him it is "mystifying" that the electorate should display an "unusual indifference". He dwells regretfully on the absence of "gratitude in politics" and especially in a democratic country. It is strange that Mr. Garvin should regard office and power not as the opportunity of service thrust on the fittest, but the reward of past achievement. Obviously pension, not power, is the proper return for exceptional work done in the past. The danger which any State has to guard against most is that of the ministry outstaying its usefulness.

There can thus be no question of retaining the present Government in consideration of past service. In fact, a reference to past usefulness is itself a confession of present uselessness. The bye-elections show clearly that the electorate has understood the position and is proceeding to effect the change. The change would be the most natural, if Britain does not waver in her traditional spirit of constitutionalism. It is here that the lure of Fascism and the reactions which it sets up come in to disturb the tenor of British politics. Sir Oswald Mosley and Sir Strafford Cripps are both catching the infection from the epidemic of Fascism, and spreading it fast, too. And the rank and file of Labour mutely wonder whether socialism can at all come by peaceful means. It pays the Liberals and the Tories to raise the fear of a *coup d'etat.* Sir Herbert Samuel declares that Brown shirts and Black shirts cannot be met with night shirts. The *Times* and the *Observer* are egging the National Government on to repression. This subsidence of faith in persuasion and propaganda is more dangerous than any *coup d' etat* on the part of one section can be. But *coup d' etat* or no *coup d' etat,* there will be a new spirit in play ere long ; and if Labour is not baulked of power there is some hope for world peace yet.

UNITED STATES OF AMERICA

ROOSEVELT'S FIRST YEAR

Mr. Roosevelt has completed his first year of office. It has been altogether a memorable year. In the United States the President's job is never a soft one. But Mr. Roosevelt took up the reins at a time when America was passing through one of her worst periods of depression. Her entire banking system was dislocated, her industry was in a bad way, the unemployment figures were swollen to huge dimensions. In all these departments there has been improvement. Mr. Roosevelt has acquired staunch friends no less than bitter enemies in achieving all this. But events have fully justified the bold steps which the President took to lift America out of the economic crisis which had overtaken her. Posterity will remember Mr. Roosevelt as a man who had the pluck to fly in the face of widespread opposition, while he yet retained a hold on the abiding interests of the country.

True it is that Mr. Roosevelt has been compelled to sanction enormous expenditure to bring about the improvement. There are critics who say that the improvement is "in spite" of the spendthrift President. But it must be admitted that the abnormal conditions of the country when Mr. Roosevelt took up the reins, required a bold policy carried out with quickness and sagacity. What Mr. Roosevelt has achieved could only be achieved in the way he has achieved it. The normal legislative procedure is by no means suited to a time of extraordinary crisis. It was necessary that a bold policy should be followed, if necessary, against the full weight of public opinion. That is what Mr. Roosevelt has done; and today America is reaping the benefit of his actions.

The following summary is taken from the *Financial News* giving the record of Mr. Roosevelt's achievements for the year he has been in office:

1. Business men, manufacturers, and producers of all kinds of goods are receiving an average of 21 per cent. more for their products than they were at the lowest point of the depression. Farmers, while still working under difficulties, are getting 43 per cent. more for their produce than they were a year ago.

2. Business activity is 30 per cent. greater than at the worst point of the depression. Profits have replaced losses in most branches of industry ; dividends have been resumed on a broad scale ; prices of industrial securities are 80 per cent. higher on the year.

3. Under the N.R.A., industry throughout has been "coded," with a view to eliminating wasteful competition, providing profitable but not exorbitant returns, and improving labour conditions.

Air Mail Week

4. Unemployment has ceased for the time being to be the menace it was a year ago. Industrial absorption of unemployed is estimated at 2,000,000.

5. Under Government schemes, financed at a cost of $2,000,000,000 (1933-34), more than 4,000,000 were temporarily at work in January.

The catalogue of Mr. Roosevell's achievements is so convincing that little need be said in detail about any one item. No wonder that while thus interest and that is girding its loins to fight the President, the masses are solidly behind Mr. Roosevelt, the economic Messiah. The moral qualities which he has brought into play in the working of the N.R.A. have not yet been appreciated by the people of America. For a country which has made the biggest contribution to the vocabulary of corrupt politics, it is indeed an incalculable gain to have a President who can snap his fingers at he biggest and the most powerful cancus. One by one, the anti-social elements have been brought under control. And there is no doubt that opposition to the U.R.A. has been thoroughly demoralised. The New Deal will stand or fall on its own merits. And who can doubt that its merits are legion and out number the demerits, such as there must be in the best of man-made plans.

FRANCE

THE NEW BUDGET

The Finance Bill has, after all, found its way to the Statue Book, thanks to the strenuous efforts of the Finance Minister. The Chamber had to sit till late in the night ; the clocks had to be stopped at midnight on the February 28, so that members could be spread the uneasy feeling of a too lengthy sessions and the Budget passed in time to escape the necessity of providing credits for March. Total credits authorised amount to 48,315,570,000 francs and receipts are estimated at 9,000,000 francs higher at 48,427,570,000 francs. Voting in the Chamber was 548 in favour and 132 against, while the Senate voted 284 for and 15 against.

The most outstanding feature of the new Budget is the Government's new powers to effect economies. Ten days back, when the new Government made known its intention of getting the Budget voted by any means, there was no indication of the extraordinary powers of the executive. It is also understood that even the Government did not contemplate asking for such powers. The inadequacy of the Budget estimate and the weak position of the Treasury, which has been giving some cause for anxiety, have probably induced the Government to seek these new powers to be utilised in case of emergency. As indicated in last week's review, the progressive shrinkage in the note circulation had made it difficult for the Treasury bills to be renewed. In addition to the task of tiding over lean months that are ahead, the Treasury has also to meet the loans that will be maturing shortly. The progress of the enquiries of the Parliamentary Commission into the Stavisky Scandals has revealed new complications ; and certain sections of the Radical party have begun to display some signs of impatience over the party truce. The new Ministry, in view of the history of events in France in the past months, cannot even afford to take a chance with regard to the confidence of the Chamber.

This then may, perhaps, explain for the new "decree-laws"—similar to those that M. Poincaire resorted to in the 1926 financial crisis in the teeth of the opposition from the Radicals. Socialists and Communists, the Senate and the Chamber have sanctioned these powers. The Senate, the members of which enjoy a longer tenure and a more secure position, even insisted that then new Budget should incorporate additional economies to the extent of 600,000,000 francs but in the face of the opposition from the Chamber, had to rest content with the assurance of the Finance Minister that all possible economies would be effected.

In spite of all the safeguards and the caution, with which the Government have proceeded to produce a balanced budget, there is suspicion even among the governmental groups, that revenue may prove to be over-estimated. Likewise, economies may also prove to have been exaggerated. The progress of international politics has not been very satisfactory. The Disarmament Conference is more dead than alive. Mr. Eden, who has just finished

POST BOX. No. 120. CALCUTTA.

his whirlwind tour over the continent, has returned to England ; and though he reports that it is too early to be pessimistic about the disarmament question, he could not conceal the jealousy and suspicion with which Germany and France regard each other. In view of the recent developments in Austria, French fears have been strengthened ; and it is not unlikely that France may have to launch on a large programme of army and military expenditure. The possibility of a heavy item of expenditure in the midst of talks on economy and reduction in salaries etc. is certainly not welcome. The Finance Minister admitted in the final debate that to ensure a real equilibrium several milliards of francs must be obtained : but exactly where from he is going to find these few milliards remains to be seen.

As at present, the total expenditure for 1934, as voted in the Chamber is about 50,000 million francs ; and the figure is less than the total for the previous year by only 300 million francs but exceeds the figures for 1929, by nearly 6,000 millions francs. Economies can be effected only by two means, if at all—(1) by a reduction in the salaries and pensions and (2) by a fiscal reform "designed to broaden the basis of taxation". The first, though necessary, is a dangerous one especially in the present state of economic depression and widespread discontent. Nor is fiscal reform any more hopeful. The commercial relations with England have not progressed in a manner helpful to the balancing of the budget. The French Government have removed the 4 per cent. and 6 per cent. import taxes on British commodities. The import rate has thus been restored to the old flat rate of 2 per cent. on raw materials, semi-manufactured goods and manufactured products alike. A bill was passed by the Chamber during the week authorising the Government to take necessary action. While this may help towards a satisfactory settlement of the present economic war between the two countries, the loss of revenue to the French Treasury as a direct result of the reduction of imports duty cannot be denied, unless it is otherwise compensated by an increase due to general trade revival. Depending as she does on bilateral trade agreements, a general revival in France's export trade is possible only as a result of successful quota negotiations with neighbouring countries. The readjustment of fiscal machinery at the present juncture is in any case a complex and difficult task.

The task must, however, be performed, if another Ministerial crisis is to be averted. To keep the Treasury solvent, to meet the long-term floating debt that will be maturing shortly, to revive the public confidence in the determination of the Government to put matters right—the public will have to make the sacrifices involved in a reduction of expenditure by cut in salaries, etc.

No doubt a situation such as this will be seized by the Left and the Centre organisations to rouse the latent resentment of the Parisian mob to a high pitch of frenzy and thereby to attempt to overthrow the coalition. The Socialists, on the one hand and the Radicals on the other, will begin with a condemnation of the mild departure from constitutional practices ; the Fascists and Communists will begin to attack the Republican régime. But this desperate attempt should be quite easy for the Government to overcome, backed as they are by both the Senate and the Chamber and armed, too, with extraordinary powers granted by the whole legislature.

If the Government would avoid the thorny path of economic administration, they have open to them the easy alternative of devaluation. From across the Atlantic, the monetary experiments and the signs of success that are attending them prove too tempting. M. Paul Reynaud, an ex-Finance Minister, suggests to the Chamber that, if expenditure could not be cut to the level of revenue and if French prices could not be reduced to that of the world-level, then "for heaven's sake" let us have deliberate devaluation. This has been suggested as preferable to inflation inevitably to be followed sooner of later by devaluation. Czechoslavakia, has been the latest country to have recourse to this handy step. But the authorities have expressed their unequivocal faith in the present standard. "Neither inflation nor devaluation" is the ready reply of M. Germain Martin ; for he is afraid of a rise in prices, and a stringent money market for Government borrowing ; nor is he confident that this will stimulate the dying export trade, as the neighbouring countries will quickly begin raising their tariffs to the extent of the devaluation ; and reducing the quotas.

Definitely rejecting inflation and devaluation, France has been following a course of deflation. In the last week's review the return of the Bank of France showed this tendency clearly with the result that the money market has become very tight. Higher rates of interest have to be offered by the Treasury for securing short-term accommodation. But how long this unnatural artificial stringency of the market can be sustained remains to be seem.

GERMANY

Working of Reichsbank in 1933.

One more year has ended in the history of the Reichsbank and the results of working for 1933 are now available. The Bank has maintained, for the seventh consecutive year, the payment of a 12 per cent. dividend, which, considering the difficult period that Germany is passing through with regard to her foreign debt obligations, must be considered creditable. The gross profits fell from Rm. 185 millions of 1932 to Rm.

129.4 in 1933 ; but without providing for contribution to the contingency reserve the nett profit comes out to practically the same figure as in 1932, *i.e.,* Rm. 40,080,000 against Rm. 40,000,000. The ordinary reserves are strengthened by Rm. 4,000,000 and a further Rm. 18,000,000 goes to the German Government. The decline in the earnings of the Bank is attributed to a fall in profits from discounting ; for the income from this source is only Rm. 102.6 millions as against Rm. 162.2 millions in 1932.

The most important feature in the last year's financial statement is the decline in the gold cover for the note issue. At the end of last year the gold cover was Rm. 386,200,000 as compared with Rm. 806,200,000 at the end of 1932. The total amount of notes in circulation is Rm. 3,645 millions in 1933 against Rm. 3,560 millions at the end of 1932. The ratio of gold to note is only 10.5 per cent. in 1933 as against 22.7 per cent. in 1932. Compared with a 77 per cent cover for the French currency and 36 per cent. for the English currency, the cover against the mark is really poor and too insufficient a backing for a currency on the gold standard. But this fall in the gold cover is due to the repayment of 86 millions dollars to the Bank of International Settlements, and 45 million dollars to the Golddiskontbank in discharge of obligations. But, at the same time, the balance sheet shows, that in addition to the currency reserves published in the weekly statements, the bank has "hidden reserves" to the extent of Rm. 216 millions as against Rm. 139 millions last year.

A feature of the year was the inauguration of the open market policy. Securities amounting to Rm. 259,400,000 were purchased during the year, consisting mainly of tax scrips ; and the report says that the stability of the Bank has been maintained in spite of the international chaos in currency.

The annual general meeting of the stockholders of a bank to receive the results of the year's trading is always the best occasion for the President of the Bank for reviewing the position during the year just ended. Dr. Schacht accordingly utilised the opportunity to remind the shareholders about the burden of the foreign indebtedness, half of which was due to the dictates of Versailles. That the volume of indebtedness has exceeded the ability of Germany to bear such a burden, espcially in view of the shrinkage in the total volume of business, transacted by the world, has been pointed out. Devaluation by some creditor countries was also referred to ; and though the external debt has been reduced to the extent of the devaluation the fall in the export trade has been more precipitate. The only circumstance that Dr. Schacht was able to relate with satisfaction was that foreign countries were beginning to understand German conditions better. They have now come to realise that the significance of the economic and financial position of Germany to the raw materials market. There are signs that America is paying greater attention to this aspect of the problem than formerly. German exports to-day are scarcely two-fifths of what they were some three years ago ; and in the face of this, it speaks for German solidarity and morale that the foreign countries have lost practically nothing from the collapse of Germany. That could not be said of other countries. The interest payments might have been reduced, moratorium might have been extended, but these are only after considering her ability to pay. The chief principle of the Bank's policy has been stated by Dr. Schacht to be the maintenance and extension of the freedom of action which was recovered last year.

The next event of note during the week is the extension of the German Municipal Standstill Agreement. The Agreement is due to expire on March 15 ; and the creditors declared that they were ready to agree to a further prolongation by one year. The new agreement covers the Rm. 148 million of short-term foreign debts, of which Rm. 100 millions are granted to nine Federal States and the balance to 23 municipalities. British credits total only £3,054,000 and $87,500. When the previous agreement was signed the total credit involved was Rm. 189 millions ; and during the course of last year a reduction of Rm. 41 millions or 21 per cent. has been effected which cannot be considered unsatisfactory.

As with other Standstill Agreements, the new agreement does not contain any change in fundamentals. The creditors have succeeded in securing the right to call for 6¼ per cent. quarterly or 25 per cent. for the whole year of the credits to be paid in registered marks. They have also secured an option, exercisable after short notice, for the whole amount of their credits to be repaid in 4 per cent. twenty-year Reichsbank Bonds which may be sold against Registered marks.

PEARL ASSURANCE COMPANY

The seventieth annual general meeting of the Pearl Assurance Company was held at its offices in London on February 22, 1934, Mr. George Tilley, the Chairman of the Company, presiding. The Chairman's speech shows the remarkable progress achieved by every department of this Company, which is one of the biggest and soundest insurance concerns of United Kingdom.

The Revenue account of the Ordinary Life Branch shows a considerable increase in the New Business effected during the year 1933 compared with the figures of last year. During the year 44,361 policies assuring a sum of £8.76 millions were completed showing an increase of 3,319 policies and £1.14 millions. It may also be mentioned that the set-back suffered during the year 1932 over the figures of 1931 was more than made up in the year that has just passed. The accompanying table shows the New Business figures of the last 3 years in thousand pounds:—

	1933	1932	1931
No. of policies ...	44,361	41,042	39,283
Sums assured ...	8,762	7,618	8,022
Annual premiums ...	482	417	441
Single premiums ...	264	139	67

The rapid growth of single premium policies can easily be seen from the above figures. This fact coupled with the increase in the annuities granted shows that the Company helps a great way in the matter of investments of private individuals in these uncertain days when investment for profit is found difficult even by experts, and the Chairman of the Company is rightly proud of the Company's ability to provide this service. The total premiums received amounted to £5.02 millions representing an increase of £174,000 and the net interest received on the ordinary life fund amounted to £1.41 millions representing an increase of £27,000 nearly. On the disbursements side claims by death accounted for £853,000 and claims by maturity £2,016,000; commission and management expenses amounted to £507,000 absorbing 10.1 per cent. of the total premiums received. The ordinary life fund at the end of the year was substantially increased by nearly £2 millions to £34.12 millions. The Company makes annual valuations and the valuation as at the end of 1933 disclosed a surplus of £1.35 millions including the undivided surplus of £267,000 of last year. After allotting a simple reversionary bonus of 2 per cent. per annum, £100,000 to reserve fund, £186,000 to Profit and loss account, £292,000 is carried forward as undivided surplus. The practice of carrying forward larger and larger undivided surplus, which prevails among first class insurance companies, is, indeed, a very good precaution to make up the deficiencies of any future year and to maintain the same bonus rate.

Good progress is shown in the Industrial life department also which is the Company's largest department. The New Business secured during the year amounted to 1.29 million policies assuring a sum of £20.09 millions as against 1.23 million policies and £19.50 millions in the year 1932. The total premiums received in this department amounted to £7.44 millions showing an increase of £188,000 and the net interest received on the Industrial life fund amounted to £1.52 millions. On the disbursements side claims by death amounted to £2.53 millions, claims by maturity amounted to £776,000 and commission and management expenses amounted to £2.38 millions showing an expense ratio of 31.9 per cent. The annual valuation of this department revealed a surplus of £1.80 millions on which £573,000 was allotted to the Industrial policyholders as bonus, £100,000 was allotted to the Reserve Fund, £400,000 was transferred to the Profit and Loss account leaving £650,000 as undivided surplus to be carried forward.

The fire revenue account shows a total premium income of £776,000 representing an increase of £275,000; claims amounted to £310,000 (39.9 per cent. of the premium income); commission and management expenses amounted to £297,000 (38.2 per cent.); reserve additions amounted to £110,000 (14.2 per cent.) and profit earned amounted to £60,000 (7.7 per cent.). The total fire fund at the end of the year including the additional reserves amounted to £772,000 which is nearly 100 per cent. of the premium income. The Personal Accident section also shows gradual though slow improvement. The premiums received during the year was £77,000 of which claims to the extent of £38,000 (50 per cent.) was paid, commission and management expenses amounted to £15,000 (19.4 per cent.) and profit of this department amounted to £23,000 (29.6 per cent.). The Employers' Liability account also showed a profit of £3,000 (14.1 per cent.) with a premium income of £22,000 nearly. Motor Insurance department showed a premium income of £110,000, claims amounting to £54,000 (49.3 per cent.), commission and management expenses amounting to £48,000 (43.5 per cent.), additions to the reserves amounting to £7,000 (6.1 per cent.) and a profit of £1,000 (1.1 per cent.). The only account which showed a loss was the General Accident Department where the total premiums amounted to £113,000, claims amounted to £49,000 (43.5 per cent.), commission and expenses amounted to £46,000 (40.8 per cent.) additions to the reserves amounted to £20,000 (18 per cent.) and loss amounted to £3,000 (−2.3 per cent.).

The Consolidated Balance Sheet of the Company shows on the liabilities side a paid up capital of £1.5 millions, the funds of the various departments as given in the revenue accounts, an investment reserve fund of £5.65 millions, staff persion funds of £1.19 millions, outstanding claims amounting to £412,000 in all and other small miscellaneous liabilities. On the assets side, British and Foreign gilt-edged securities in all amount to £53.77 millions out of the total assets of £79.67 millions representing 67 per cent. of the total assets. Of this British Government, Provincial and Municipal securities accounted for £36.73 millions or 46 per cent., Indian and Colonial securities accounted for £13.13 millions or 16 per cent. and foreign securities accounted for £3.91 millions or 5 per cent. Policy Loans amounted to £3.29 millions or 4 per cent.; Mortgage and other loans amounted to £2.53 millions or 3 per cent., Railway and other Debenture Shares amounted to £3.84 millions or 5 per other properties amounted to £2.5 millions or 3 per of the Company.

The Chairman in his speech has expressed the difficulty of obtaining the same rate of interest for fresh investments as has been obtained so far. He is of opinion that the end has come of the phase of abnormally high interest rates for British Government and other Trustee securities. The Profit and Loss Account shows that a sum of £586,234 has been transferred to it from the Life surplus and a sum of £30,000 has been transferred from the General insurance funds and out of the total sum of £780,969, including the Brought forward of last year, £292,909 has been paid to the ordinary shareholders as final dividend for the year 1933.

The above figures clearly show that the Pearl is one of the soundest and biggest Insurance Companies of the world and it is represented in India by Messrs. C. M. Ross & Co., Ltd., of Hornby Road, Bombay, and by Messrs. Andrew Yule & Co., Ltd. of Calcutta.

METROPOLITAN LIFE INSURANCE COMPANY OF NEW YORK.

Metropolitan Life Insurance Company of New York is, far and away, the largest life insurance company of the world and its business figures are amazing records. We give below the results of the Company's working for the year ended December 31, 1933 as they prove how primitive India is in this regard and stress the need for heady progress.

The new business of the Company for 1933 amounted to $3,175 millions (£635 millions) as against $3,273 millions (£655 millions) in 1932 and $3,420 millions (£684 millions) in 1931 which was the highest recorded new business of the Company. It may be mentioned here, as a matter of interest to the readers, that the total life assurance in force of all the companies working in the whole of India, is less than one-fifth of the New Business for 1933 of this gigantic life insurance company. Of this total new business, $1,583 millions (£317 millions) was ordinary life business, $1,505 millions or (£301 millions) was industrial life business and $86 millions or (£17 millions) was group life business. The total life assurance in force of the Company at the end 1933, was 41.7 million policies assuring a sum of $18,803 millions or (£3,761 millions as against 42.7 million policies and $18,981 millions or (£3,796 millions) at the end of 1932. The total ordinary life assurance in force was $9,936 millions or (£1,987 millions) ; industrial life assurance in force was $6,425 millions or (£1,285 millions) ; and the total group life assurance in force $2,442 millions or (£488 millions). In addition to the above total sums assured, the Company had in force personal accident and health insurance carrying a capital sum benefit of $1,214 millions or (£243 millions) and a weekly indemnity of $12.5 millions or (£2.5 millions).

Payments to its policyholders and their beneficiaries during 1933 amounted to $573 millions of which death claims accounted for $152 millions and the balance of more than $400 millions was paid to living policyholders. The total payments averaged $4,741 a minute for each business day. The total assets of the Company on December 31, 1933 amounted to $3,861 millions or (£772 millions). This amount is nearly equal to the total national debt of India outstanding with the public. The surplus divided to the policyholders as dividends amounted to $95 millions and the unassigned surplus was increased to $243 millions.

NOTE : The dollars are converted into sterling at $5 per £1.

ORIENTAL'S NEW BUSINESS.

The amount of New Life Assurance Business written by the "Oriental" last year was:—

As compared with an increase of

38,191 Policies Assuring Rs. 7,04,26,203
29,982 Policies Assuring Rs. 5,94,00,727 in 1932
8,209 Policies Assuring Rs. 1,10,25,476.

This constitutes a Record New Business, the previous Record being the New Business of 1929, which amounted to 31,128 Policies assuring Rs. 6,50,04,539, so that new record exceeds the last record by 7,063 in Policies and Rs. 54,21,664 in sums Assured.

Considering that the Company this year celebrates its Diamond Jubilee having been established in the year 1874, the above results are noteworthy.

WORLD TRADE IN 1933

NEW NORMAL AT LOW LEVEL ?

The Economic Intelligence Service of the League of Nations has made a study of the figures for world trade in 1933, from which the following conclusions emerge:

In the first place the total volume of goods exchanged between countries has diminished by about 30 % by comparison with 1929. This aspect of the condition of world trade is especially serious. Previous crises never showed such a shrinkage in the volume of trade ; on the contrary a fall in prices used to give rise speedily to an increase in the volume of trade which made it possible for the situation to improve.

In the second place the quantitative fall has been accompanied by a considerable drop in the prices of the goods exchanged. On the basis of gold prices this drop is of about 50 %. If another standard is adopted as a criterion such as, for instance, the pound sterling, the drop is only about 30 %. If the two sets of percentages—namely volume of trade and price index of the goods exchanged—are combined so as to give an idea of the total value of trade in 1933 as compared with 1929, it becomes apparent that on the basis of gold the total value of trade in 1932 is less than a third of the trade of 1929 ; calculated in pound sterling scarcely a half. Even taking account of the fact that to-day the bulk of world trade takes place on the basis of paper money and that most international debts have been contracted in dollars or pounds sterling, the conclusion results that the value of world trade has been cut in half.

In these circumstances, the payment of international debts which were already a burden in 1929 encounters increased difficulties of transfer from one country to another. It should not be forgotten that certain countries have remained on the gold basis and have been unable to maintain the value of their trade. If the trade of the most important countries is compared on the basis of the gold standard, it will be found that most of them are in the position of keeping only about 35 % of their 1929 trade. The United States is in a particularly bad situation, having retained only a quarter of its 1929 trade.

But if the trade of the various countries is calculated on the basis of their respective national currencies, the picture changes. Thus Japanese experts estimate the fall of Japan's trade at about 12.5 % ; Australian experts put their country's loss at 8 % ; New Zealand experts 25 % In other words the trade of countries on paper currency has diminished proportionately less than that of countries on a gold basis. The statistics further show that prices in countries that have gone off gold have not been increased and prices in countries on a gold basis have not been diminised to an extent corresponding to the changes in the volume of their trade.

A third point that emerges from the Economic Intelligence Services Survey is a tentative answer to the question as to whether there are any signs of recovery in world trade? To this the answer is that the total value of world has not diminished as much in 1933 as it did in previous years. Nevertheless it has continued to diminish by comparison with the corresponding figures in 1932, with the exception of a single month in which an improvement was shown in 1933 as compared with the previous year. It is further noteworthy that in 1933 for the first time since 1929 the phenomenon of seasonal movements so well known to all economists has re-appeared. It is to this seasonal movement that the increases recorded in the statistics for the last months of 1933 should be attributed. For the same reason a diminution may be expected for the months of January and February 1934. The statistics for 1933 appear to show that world trade is in process of returning to a kind of normal school while remaining at a very low, very restricted level.

This fact is in agreement with the great changes that have taken place not only in the distribution of trade between the different countries, but also in the nature of the goods being exchanged. For instance the most considerable reductions have clearly taken place in the exchange of manufactured goods, whereas trade in raw materials and food stuffs has been better able to resist the crisis. This fact may be observed in the case of Japan and of Great Britain, which export a large part of their goods to countries with a favourable industrial development. On the other hand, this is not the case for the United States which while exporting their manufactured considerable quantities of agricultural products are not goods primarily to industrial countries and while exporting inclined to allow the free importation of manufactures, raw materials and agricultural products from abroad. The most significant signs of recovery during 1933 are shown in the countries whose economic production is complementary. As a typical case we may point to the trade between Great Britain and the Dominions.

It is difficult to give any clear indication as to the present tendency of gold prices and the volume of trade. In general gold prices show a tendency to drop and there is no clear sign of a rise in paper prices, at least in the United States.

It is, however, trade that some of the most important raw materials have shown a rise in gold prices at the end of 1933 ; this has been the case for wool, for instance. To-day prices are low and show no tendency to move and it is impossible to foresee what will happen in the next few months.

The volume of trade shows a slight increase in certain special cases. As an example we may point to the increase in imports of industrial raw materials into Great Britain. During 1933 Great Britain imported 50 % more of wool, 33 % more of timber, 12 % more of cotton and 4 % more of wool than in 1932. Exports of manufactures increased by only 3 % as compared with 1932. It is therefore obvious that the bulk of this production has been absorbed on the home market.

In these circumstances a question of fundamental importance arises—in the summer and autumn of 1933 several countries showed considerable increase in activity in home markets accompanied by a definite drop in the number of unemployed and increase in industrial production. These facts would appear to indicate that private enterprise occasionally supported by national government enterprise has organised industry with a view to fresh expansion. But this movement of recovery became uncertain and irregular by the end of 1933 and in the beginning of 1934. It appears likely that this slowing up of the movement is due to the international political position, which is far from being stable. The favourable evolution of conditions on the national market has not been accompanied by a recovery in international trade. It is even possible to assert that the recovery in certain national markets is due to the diminution of trade on the international market.

But for how long will the process of recovery and development on the national markets be maintained unless there is a corresponding return to freedom and confidence on the international market? The instability of exchange rates, the tremendous movements of gold reserves and restrictions of exchanges are all elements that prevent the stabilisation of prices and the free development of trade. In these circumstances it is not yet possible to count upon a recovery of prosperity in international trade.

STATISTICAL INFORMATION

TRADE OF CALCUTTA.

The overseas import trade of Calcutta in private merchandise in February, 1934, received a setback over that of the previous month, the value receding from Rs. 2.78 crores to Rs. 2.31 crores against Rs. 2.58 crores in February, 1933. Exports, however, advanced from Rs. 4.67 crores to Rs. 4.82 crores against Rs. 4.05 crores in February, 1933.

IMPORTS.

A comparison of the values of the principal imports with the figures for February, 1933, is indicated below, the figures in brackets representing the increase or decrease as the case may be:—

	In lakhs of rupees.
Machinery and millwork	24 (+1)
Cotton goods	34 (−21)
Iron or steel	14 (level)
Other metals	11 (+2)
Hardware	8 (+1)
Oils, mineral	6 (−2)
Liquors	5 (level)
Electrical instruments	8 (level)
Tobacco	1 (−5)
Chemical and Chemical preparations (excluding chemical manures and medicines)	12 (+4)

The total yardage of cotton piecegoods shrank from 29 million yards to 13 million yards and the value fell from Rs. 43 lakhs to Rs. 23 lakhs. The fall under cotton goods was mainly due to lesser imports of grey piecegoods. Poorer importations of oil other than kerosene account for the drop under mineral oils. The fall under tobacco was due to lesser imports of unmanufactured leaf. There was no importation of wheat from abroad. A heavy importation of rice from Siam was, however, recorded.

EXPORTS

The variations in the values of the principal exports as compared with the trade of February, 1933, are indicated below:—

	In lakhs of rupees.
Jute manufactures	148 (+3)
Tea	95 (+29)
Jute, raw	80 (+2)
Lac	46 (+36)
Iron, pig	5 (−5)
Hides and skins, raw	25 (+4)
Seeds (non-essential)	7 (+2)
Grain, pulse and flour	15 (+5)
Coal	3 (−1)

DIRECTION OF EXPORTS

The United Kingdom was the chief buyer of tea, manganese ore, lac, gunny bags and skins. Jute raw and hides were shipped to Germany. The United States of America was the chief buyer of gunny cloth, and pig-iron as usual went to Japan. Rice, which formed the bulk of the trade under the head "Grain, pulse and flour," went mostly to Germany.

TRADE OF KARACHI

The statistics of the foreign trade of the port of Karachi for February, 1934, issued by the Collector of Customs show that the total value of imports (merchandise) amounted to Rs. 83 lakhs, a decrease of Rs. 25 lakhs, and that of exports to Rs. 1.63 crores, an increase of Rs. 29 lakhs as compared with the figures for February, 1933. The progressive totals for the eleven months ending February, 1934, show a decrease of Rs. 3.57 crores or 24 per cent. under imports but an increase of Rs. 1.15 crores or 11 per cent. under exports.

Comparative figures of the principal imports and exports for February, 1933 and 1934, are given below:—

IMPORTS

	In February, 1934. Quantity. Tons.	Value. Rs.
Cotton Manufactures	...	25,75,231
Machinery and mill work ...	...	4,10,460
Liquors	...	3,36,591
Woollen goods	...	65,466
Vehicles	...	3,47,156
Cotton, twist and yarn	...	5,561
Oils	...	4,18,994
Metals and ores	...	7,32,820
Sugar	2,367	2,19,992

The decrease under cotton manufactures occurred in receipts of white and coloured goods. Imports of white Rs. 15 lakhs as against 17¼ million yards valued at Rs. 27 goods amounted to nearly 8½ million yards valued at lakhs, while those of coloured goods totalled 3½ million yards valued at Rs. 7 lakhs as against 5¾ million yards valued at Rs. 12 lakhs in February, 1933. Imports of grey goods at 2 million yards valued at Rs. 3 lakhs showed an increase of 819,000 yards in quantity and Rs. 1 lakh in value. The total imports of cotton piecegoods during the eleven months ending February, 1934, amounted to 137¾ million yards valued at Rs. 2.31 crores, showing a decrease of 50 per cent. in quantity and 52 per cent. in value as compared with the corresponding period last year. The share of the United Kingdom in the total imports of cotton piece-goods during the eleven months ending February, 1934, was 101½ million yards valued at Rs. 1.80 crores, a decrease of 51 per cent. in quantity and 51 per cent. in value, while that of Japan was 35½ million yards valued at Rs. 48 lakhs, a decrease of 41 per cent. in quantity and 48 per cent. in value as compared with imports in the corresponding period of 1932-33. The decrease in imports of machinery occurred in receipts of electrical machinery and sewing machines from the United Kingdom, oil engines from the United Kingdom and Switzerland, rice and flour mill machinery from Germany and sugar machinery from Belgium. The decrease under liquors was most noticeable in receipts of ale and beer from the United Kingdom. Of the total quantity (2,367 tons) of sugar imported during the month, 737 tons came from Java and the rest was mostly beet sugar from the United Kingdom. The total quantity of sugar imported during the eleven months of the current official year was 61,055 tons as against 85,290 tons in the corresponding period last year. The improvement in imports of oils occurred in receipts of mineral oils from Persia.

EXPORTS

	In February, 1934. Quantity. Tons.	Value. Rs.
Cotton, raw	27,661	1,30,71,664
Wool, raw (Indian and Foreign) ...	726	5,80,355
Hides, raw	494	3,25,825
Wheat flour	489	47,064
Wheat	44	4,338
Barley	5	378
Rapeseed	6,328	6,64,570
Skins, raw	465	3,80,442

The increase in exports of cotton occurred mainly in shipments to Germany, the United Kingdom, China, France, French Indo-China and Poland. Japan took 5,654 tons as against 7,004 tons in February, 1933. Italy and Spain also took smaller quantities. The total quantity of Indian cotton exported during the eleven months ending February, 1934, was 149,018 tons (834,501 bales) as against 109,561 tons (613,538 bales) in the corresponding period last year. Increased shipments to the United Kingdom and the United States of America mainly accounted for the improvement in exports of raw wool. Exports of raw hides increased mainly as the result of larger purchases of cow hides by Germany. The decline in exports of rape-seed was to a large extent due to entire absence of shipments to Italy which took 3,356 tons valued at Rs. 4 lakhs in February, 1933. France also took less, *viz.*, 425 tons as against 1,601 tons. Shipments to the United Kingdom amounted to 454 tons as against 1,654 tons, and 3,050 tons were shipped to Port Said "for orders" during the month under report.

TRADE OF BURMA

The principal variations in the foreign trade of the Province of Burma, during the month of February, 1934, as compared with the corresponding period of 1933, were:—

The combined value of imports and exports was Rs. 197.40 lakhs as against Rs. 223.76 lakhs, showing a decrease of Rs. 26.36 lakhs.

EAST & WEST INSURANCE CO., LTD.
ESTD. 1913.
Head Office:—East & West Buildings, Apollo Street, Fort, Bombay.
The last VALUATION REPORT reveals certain striking features.
Surplus disclosed is nearly 5½ times more than that disclosed at the previous valuation.
1933 again a VALUATION AND A BONUS YEAR.

IMPORTS

The total value of merchandise decreased from Rs. 70.64 lakhs to Rs. 67.74 lakhs. The following were the principal articles which showed decreases, the value and the amount of decrease being noted against each:—

	Value Rs. lakhs.	Decrease Rs. lakhs.
Salt	0.43	1.41
Sugar—Sugar 23 D.S. and above	0.12	3.06
Textiles—		
Cotton piece-goods—		
Coloured	6.26	2.97

Increases were, however, noticed in the following articles, the value and the amount of increase being noted against each:—

	Value Rs. lakhs.	Decrease Rs. lakhs.
Fish (excluding canned fish)—		
Fish, dry salted	1.62	1.07
Textiles—		
Cotton piece-goods—		
White	6.53	1.06

Imports of Oil Crushing and Refining Machinery of a value of Rs. 1.54 lakhs were recorded during the month whereas in the previous February no import was recorded under this head.

Kerosene oil in tins to the value of Rs. 1.40 lakhs was imported during the month under review as against practically no value in the corresponding period of last year (the value recorded under this head being Rs. 12 only).

EXPORTS

The total value of Indian Merchandise recorded during the month was Rs. 129,66 lakhs, as against Rs. 153.12 lakhs showing a decrease of Rs. 23.46 lakhs. The following articles accounted for the decreases, the value and amount of decrease being noted against each:—

	Value Rs. lakhs.	Decrease Rs. lakhs.
Grains, Pulse and Flour—		
Paddy (rice in the husk) ...	0.04	1.22
Rice (not in the husk) ...	51.25	42.33
Metals and Ores—		
Wolfram ore	2.79	1.19

Increases were, however, noticed in the following articles, the value and the amount of increase being noted against each:—

	Value Rs. lakhs.	Decrease Rs. lakhs.
Paraffin wax	13.16	3.76
Rubber, raw	1.98	1.41
Cotton, raw	21.32	14.27
Wood and Timber—		
Teakwood	4.79	1.34

TRADE OF PORT OKHA

The total import of merchandise at Port Okha during February, 1934, amounted to 5,397 tons valued at Rs. 5,40,433, consisting of 814 tons china-clay valued at Rs. 48,719, 48 tons soda ash valued at Rs. 5,285, 257 tons kerosene valued at Rs. 37,206, 47 tons dates valued at Rs. 3,393, 203 tons G. P. & G. C. Sheets valued at Rs. 39,613, 60 tons bleaching powder valued at Rs. 5,881, 457 tons sugar valued at Rs. 46,634, 2,577 tons coal valued at Rs. 38,655 and machinery, etc., valued at Rs. 3,15,047. The total export during the same period amounted to 4,209 tons consisting of 4,050 tons cement, 17 tons seeds, 142 tons magnesium, etc. The number of vessels that entered the Port was 11.

The total import during the corresponding period amounted to 2,113 tons valued at Rs. 4,30,841 consisting of 1,139 tons sugar valued at Rs. 1,15,783, 132 tons G. P. & G. C. sheets valued at Rs. 23,205, and machinery, etc., valued at Rs. 2,91,853. The total export during the same period amounted to 3,523 tons, consisting of 2,900 tons cement and 623 tons seeds, etc. The number of vessels that entered the Port was 10.

TRADE OF MADRAS

The total value of imports from foreign countries into the Madras Presidency during February, 1934, was Rs. 1,20,35,131 as compared with Rs. 1,16,53,939 in the corresponding period of the previous year, showing an increase of Rs. 3,81,182. The commodities which contributed to the increase were: Rice not in the husk 17,712 tons, Rs. 9,80,442 (+14,192 tons, +Rs. 6,94,843); fuel oils 1,708,582 gallons, Rs. 3,03,730 (+1,389,403 gallons, +Rs. 2,48,501); kerosene oil 1,857,463 gallons, Rs. 13,37,852, (+506,097 gallons, +Rs. 6,62,169); piecegoods, coloured 893,568 yards, Rs. 2,05,357 (+470,041 yards, +Rs. 84,104); tobacco, unmanufactured 305,932 lb., Rs. 4,03,564 (+274,864 lb., +Rs. 3,38,748); other articles Rs. 80,51,906 (+Rs. 2,28,322).

The total value of exports to foreign countries from the Madras Presidency during February, 1934, was Rs. 2,08,18,858 against Rs. 1,75,99,851 in the correspond-period last year, showing an increase of Rs. 32,19,007. The commodities that contributed to the increase were: coffee 35,004 cwts., Rs. 18,86,298 (+16,656 cwts., +Rs. 7,45,931), fruits and vegetables, dried salted, etc., 1,244 tons, Rs. 4,18,485 (+781 tons, +Rs. 2,70,199); cow hides 842 tons, Rs. 15,45,141 (+398 tons, +Rs. 8,58,790); castor seeds 3,656 tons, Rs. 4,10,430 (2,778 tons, +Rs. 3,00,488); tea, black 3,239,047 lb., Rs. 27,81,426 (+479,827 lb., +Rs. 4,02,667); cotton, raw 716 tons, Rs. 4,72,942 (+519 tons, +Rs. 3,38,717); other articles Rs. 78,56,176 (+Rs. 18,53,371).

INDIA'S TRADE

TRADE COMMISSOINER'S SURVEY

Imports into India have decreased by 17 per cent. and exports, including re-exports, have increased by 12 per cent. between 1st April and 31st December, 1933, compared with the corresponding period of 1932, declares the Senior Trade Commissioner in India in his survey of India's trade.

Both imports and exports of treasure have decreased. The improvement in India's balance of trade continues. The adverse balances of merchandise of Rs. 2,75,00,000 in the first nine months of 1932-33 changed to a favourable balance of Rs. 25,50,00,000 in 1933, while exports of gold amounted to Rs. 35,25,00,000, resulting in a favourable total visible trade balance of Rs. 61.46 crores.

The percentage of the reduced trade obtained by the United Kingdom increased from 35.8 to 41.3 despite the contraction in the market for piecegoods and iron and steel. This is partly a result of the Ottawa Agreement.

WORKING CLASS COST OF LIVING IN BOMBAY.

In February 1934 the working class cost of living index number for Bombay city, with July 1914 prices equal to 100, was 96, the same as in the preceding month. The index number for food articles declined by one point to 85, writes the Commissioner for Labour, Bombay.

In January 1934 the working class cost of living index number for Ahmedabad, with the average prices for the year ended July 1927 equal to 100, was 70, being one point lower than in the preceding month. The index number for food articles declined by two points to 59.

In January 1934, the working class cost of living index number for Sholapur with the average prices for the year ended January 1928 equal to 100, was 68, the same as in the preceding month. The index number for food articles remained stationary at 57.

WHOLESALE PRICES IN BOMBAY.

In January 1934 the Bombay wholesale prices index number, with July 1914 prices equal to 100, was 95, the same as in the preceding month. In comparison with the previous month, the index number for food articles was 96, the same as for the preceding month. Among food grains, cereals rose by two points to 80, a fall of one point in wheat being more than counter-balanced by a rise of six points each in jowari and bajri. Pulses fell by four points to 74 owing to a fall of two points in gram and sir points in turdal. The index number for the whole group of food grains rose by one point to 79. The index number for the "Sugar" group remained stationary at 103, although there was a fall of one point in refined sugar. A rise of 12 points in turmeric was offset by a fall of 13 points in ghee and the index number for the "other food" group remained unchanged at 143. The index number for the non-food group was 95, the same as for the preceding month.

BANK OF BARODA,

LIMITED.

Under the patronage of and largely supported by the Government of H. H. the Maharaja Gaekwar of Baroda.

(Registered under the Baroda Companies' Act III of 1897).

Ag. General Manager.

COMPANY REPORTS

EASTERN BANK

The Eastern Bank has received the following telegram from its London Office advising final dividend recommended for the year ending 31st December last:—

"Net Profit including brought forward £166,760-15-3. Annual Meeting will be held 23rd March. Directors recommend final dividend at the rate of 3/- per share less income tax at the rate of 5/- per pound less 1/- relief in respect of Dominion Income Tax making net Income Tax per pound 4/-. Placed to Contingency A/c. £55,000. Carried forward £51,760-15-3. Dividend payable on and after 26th March. Transfer Books closed from 23rd March to 7th April both days inclusive."

THE GOBINDPORE COAL CO., LTD.

Extract from the Directors' report for the half-year ended 31st December, 1933.

Report for the half-year ended 31st December, 1933, shows a Loss on Revenue Account of Rs. 306-2-6 to which has to be added the debit balance of Rs. 23,143-4 brought forward on Profit and Loss Account. After allowing for interest etc., there is a debit on Profit and Loss Account of Rs. 22,149-8-2 to be carried forward.

Sale of the Property.—Since the date of the last report, it has been decided that it was in the best interests of the Company to come to an arrangement with the purchaser rather than embark on protracted and costly litigation. Negotiations are now in progress for a settlement of the matter on the basis of which the Company will take back the property, and refund the purchaser a portion of the deposit paid by him. It is hoped that these negotiations will be concluded in the near future. G. B. Morton, E. L. Watts, J. S. Ker—Directors. F. W. Heilgers & Co.—Managing Agents.

Comparative statement of the balance sheets for the last three consecutive half-years:

THE ONDAL COAL COMPANY, LTD.

Extract from the Directors' report for the half-year ended 31st December, 1933.

Report for the half-year ended 31st December, 1933 shows a profit of Rs. 13,153-3-7 including the sum of Rs. 2,305-15 brought forward from last half-year.

The Directors propose to dispose of this as follows:—

	Rs.	A.	P.
In paying a Dividend on the Preference shares at the rate of 6½ per cent per annum, free of Income tax	6,500	0	0
In paying a Dividend on the ordinary shares of four annas per share, free of Income-tax	6,250	0	0
In carying forward	403	3	7
Total ...	13,153	3	7

Raisings from the sub-leased properties exceed the tonnage on which minimum royalty is payable.

Coal Restriction Scheme.—A scheme for the restriction of colliery output has been formulated and supported by all sections of the Coal trade. This scheme is now before the Government of India, and it is hoped that legislation will shortly be introduced embodying the proposals agreed to by the trade, which should end the period of over-production and ruinous price-cutting which is responsible for the present precarious condition of the industry.

G. B. Morton, E. L. Watts, J. S. Ker—Directors.

THE HURRILADIH COAL COMPANY, LTD.

Extract from the Directors' Report for the half-year ended 31st December, 1933:

After providing Rs. 17,037-0-0 for Depreciation, the Accounts show a balance of Rs. 6,863-10-3 at credit of Profit and Loss Account including Rs. 5,225-11-8 brought forward from last half-year. The Directors propose that this should be carried forward.

Stocks totalled 3,172 tons on 31st December, 1933.

Collieries—Ackhalpur Colliery remained closed during the period. The lack of demand also resulted in Kendwadih Colliery working to below productive capacity.

General—Selling prices have fallen still further during the half-year and they are materially below the rates ruling twelve months ago.

E. G. Abbot, G. W. Leeson, E. L. Watts, K. J. Micolson—Directors Marneill & Co—Managing agents.

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1933.

After providing Rs. 48,250-0-0 for Depreciation and placing Rs. 10,000-0-0 to Reserve there is a balance at credit of Profit and Loss Account of Rs. 1,01,191-12-10, which they recommend should be disposed of as follows:—Dividend of ten annas per share (12½ per cent. per annum) Rs. 88,013-12-0, and carry forward to current half-year Rs. 13,178-0-10.

There was a slight improvement in the trade of the Port for a short period during the half-year.—Henry Birkmyre, A. Aikman, Directors.

NAGA HILLS TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital	4,00,000	Block	3,20,000
Reserve	1,00,000	Outstandings	3,607
Debts	17,798	Cash	1,39,948
Profit and Loss	61,757	Investments	1,16,000
Total	5,79,555	Total	5,79,555

Extracts from Directors' Report:

Report—For the year ended 31st December, 1933.

Accounts—The working of the season resulted in a profit of Rs. 86,051-15 to which is added Rs. 2,271-11-10, last year's credit balance of the Profit and Loss Account after sundry adjustments, giving a total of Rs. 88,323-10-10 at the credit of the same Account. From this the following amounts have been written of:—Depreciation on Buildings Rs. 10,000, Depreciation on Machinery Rs. 5,000, Depreciation on Investments Rs. 875, total Rs. 15,875.

After providing for Income-tax, Commissions and Bonuses there remains a sum of Rs. 61,756-8-10 at the credit of the Profit and Loss Account. The Directors recommend that a Dividend at the rate of Re. 1-8 per share, free of Income-tax, be distributed out of this, and the balance of Rs. 1,756-8-10 be carried forward.

Outturn and Price.—The total quantity of Tea made during the year amounted to 5,021 maunds against an estimate of 5,000 maunds and 4,779 maunds (actual) in 1932. The year's output including the quantity sold after 31st December, 1933, fetched Rs.2,15,342-15-6 on an average of 8.59 annas per lb. against last year's average of 6.0 annas. an average of 8.59 annas per lb. against last year's average of 6.0 annas.

The estate was allotted 244,700 lb. Export Quota rights. No allowance was made for the heavy loss of crop that had arisen from temporary abandonment of certain planted sections in 1929, 1930 and 1931 and from hails and droughts in 1932.

ESTIMATES.—The current year's estimate of expenditure is Rs. 1,44,150 and of outturn 5,000 maunds.

LABOUR.—There were 687 coolies on the Garden on 31st December, 1933, as against 695 oa the corresponding date in the previous year, including short-termers.— C. C. Pyne, K. C. Sen, J. Roy, J. C. Sen, K. Ghosh, R. C. Sen, Directors.

RANICHERRA TEA CO., LTD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital	5,73,750	Block	5,73,750
Reserves	1,45,000	Crop Account	26,259
Debts	27,360	Outlay	29,912
Profit and Loss	30,795	Suspense Account	4,525
		Outstandings	4,240
		Cash	1,38,219
Total	7,76,905	Total	7,76,905

Extract from Directors' report:

Report—For the year ended 31st December, 1933, shows a profit on Revenue Account of Rs. 88,086-4-2. The Balance brought forward from last year was Rs. 596-6-1. To this has to be added:—Profit on Sale of Investment Rs. 3,455, less—Adjustments Rs. 342-15-3, balance Rs. 3,112-0-9; total Rs. 3,708-6-10, grand total Rs. 91,794-11. From this has been placed—To Reserve for Taxation Rs. 6,000, to Reserve Rs. 55,000, total Rs. 61,000, leaving an available balance of Rs. 30,794-11, this balance the Directors recommend should be disposed of as follows:—In payment of a Dividend of 5 per cent. per annum (free of Income-tax) absorbing Rs. 28,687-8, leaving a balance at credit of Rs. 2,107-3, to be carried forward to next account.

Under the Scheme for Restriction of Exports and Crop the Company was allowed to produce 8,658 maunds. Owing to unfavourable climatic conditions the crop produced was 8,119 maunds compared with an unrestricted crop of 10,727 maunds in 1932. The balance of unused Manufacturing Rights was sold and a quantity of Export Rights was purchased which enabled the Company to sell more tea at the prevailing higher rates for tea for export out of India.

The crop was sold on the Calcutta market and realised an average price of Annas 8-7 per pound compared with Annas 4-4 in 1932.

The Estimate for 1934 provides for a restricted crop of 8,772 maunds to cost Rs. 3,06,940.

In the Earthquake of the 15th January, the chimney of the Manager's bungalow fell through the roof and the walls of the building were badly damaged. To meet the cost of the necessary repairs to this building a sum of Rs. 5,000 has been set aside and included in the amount placed to Reserve—H. A. Antrobus, D. Inglis Duff, N. D. Gye, Director. Begg Dunlop & Co., Ld., Managing Agents.

TYROON TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.

Reserves	1,60,000	Crop Account	36,390
Debts	27,940	Outlay	12,237
Profit and Loss	26,552	Suspense Account	9,563
		Outstandings	1,116
		Cash	1,55,186
Total	6,14,492	Total	6,14,492

Extracts from Director's Report:

Report—For the year ended 31st December, 1933, shows a profit on Revenue Account of Rs. 62,562-15-7. The balance brought forward from last year was Rs. 28-14, to this has to be added:—Adjustment for Season 1932 Rs. 1,677-6-5, equal Rs. 1,706-4-5, total Rs. 64,269-4. From this there has been placed:—To Renovation of Leaf House Rs. 8,517-5-9, to Reserve for Taxation Rs. 4,200, to Reserve for Improvements Rs. 5,000, to Reserve Rs. 20,000, equal Rs. 37,717-6-9 leaving an available balance of Rs. 26,551-14-3, which the Directors recommend should be disposed of as follows:—In payment of a Dividend of 6 per cent. per annum (free of Income Tax) absorbing Rs. 24,000, leaving a balance at credit of Rs. 2,551-14-3 to be carried forward to next account.

Under the scheme for the Restriction of Exports and Crop, the Company was allowed to produce 3,493 maunds. The actual crop made was 4,328 maunds and by the purchase of export and manufacturing rights the whole of this quantity was disposed of. The unrestricted crop produced in season 1932 was 4,308 maunds.

The crop was sold in Calcutta and realised an average price of As. 11-6 per lb. against As. 9-1 per lb. in 1932.

The estimate for Season 1934 provides for a restricted crop of 3,539 maunds to cost Rs. 1,79,610.—Begg Dunlop & Co., Ltd. Managing Agents.

LOOBAH CO., LD.

Synopsis of Balance Sheet:

Debts	2,67,231	Stores, etc.	5,437
		Outlay	2,790
		Cash	13,458
		Profit and Loss	1,24,932
Total	8,71,721	Total	8,71,721

Extract from Directors' report:

Report—For Season 1933.

CROP.—Under the crop control scheme which was brought into operation as from Season 1933, the Company was permitttd to manufacture 5,087 maunds (4,283 maunds for export and 804 maunds for non-export) and it made 5,330 maunds, the difference being covered by

SHREE LIFE
TRIPLE BENEFIT
ASSURANCE
PARTNERSHIP
COMPANY LTD.
FAMILY PENSION
BOMBAY
THE IDEAL POLICIES
Branch Office : 102, Clive Street, - CALCUTTA

the purchase of Production Rights. 4,311 maunds were exported and 28 maunds of Export Rights were purchased to conform with the original quota.

A good standard of manufacture was maintained on both divisions and it is satisfactory to record a very marked improvement in the quality of the Kallinecherra teas.

On a greatly improved market an average price of 8 annas 5 pies a lb. was obtained for the Company's crop as compared to 4 annas 2 pies a lb. realized for the previous season's teas.

Area.—No extensions were put out during the year, and the area under cultivation remains unchanged at 1,060 acres.

Accounts.—The receipts amounted to Rs. 2,25,406-11-4 and the expenditure to Rs. 1,61,015-3-11, showing a balance at credit of Revenue Account of Rs. 64,391-7-5. After allowing for Debit balance brought forward from 1932 Rs. 1,83,191-10-11, Managers' Commission Rs. 3,219-9, Managing Agents' Commission Rs. 1,287-13-3, Subscriptions to Octavius Steel & Co., Ld., Provident Institution Rs. 624, Motor Truck Account—Amount written off Rs. 1,000, Total Rs. 1,89,323-1-2, there is a balance of Rs. 1,24,931-9-9 at debit of Profit and Loss Account which is carried forward.

The estimates for Season 1934 are for a crop of 5,152 maunds to cost Rs. 1,72,883.

Export quotas under the Regulation of Exports Scheme have not yet been allotted nor has any decision been arrived at by the industry in regard to restriction of production for the coming season—hence the figures of estimated crop are subject to revision at a later date.

Labour.—1,182 hands were employed on the gardens at 31st December, 1933.—B. C. Studd, Srigopal Bhattacharji, J. Maggregor, Directors. Octavius Steel & Co., Ld., Managing Agents.

Total ...	8,37,545	Total ...	8,37,545

Extracts from Directors' Report:

Report—The Directors submit herewith the Audited Accounts for the half-year ended 31st December, 1933, showing a profit on Revenue Account of Rs. 10,533-11-2, and a balance at credit of Profit and Loss Account of Rs. 26,501, which they propose to deal as follows:—To Dividend to the Bengal Flour Mill Company, Limited, at 2½ per cent. per annum Rs. 7,500, to balance carried forward Rs. 19,001, total Rs. 26,501.

The unfortunate conditions recorded in the last report continued throughout the half-year, and account for the extended period of unfavourable working. Until either the crushing duty of Rs. 2 a cwt. on imported Wheat is withdrawn, or until Indian Wheats closely approximate the world's parity of prices, the future is likely to remain the reverse of satisfactory for Calcutta Flour Mills. It has been now intimated that the tax on imported Wheat will continue for another year. With plentiful supplies of comparatively cheap Wheat at Karachi the Mills there have turned Calcutta into a dumping ground for their surplus products, with the result that any little profit the Mills here were previously able to earn has been turned into serious losses, as will be, the Directors think, borne out when the reports of the other local Mills are issued. The strange thing is that Karachi, in spite of the above, is agitating even more than Calcutta Mills for the withdrawal of the duty on Australian Wheat. Alongside, they have the extraordinary anomaly of non-Empire grown rice—Wheat's most serious competitor—being admitted into the country free of duty. With all these handicaps, exports of flour from Calcutta continue at a standstill, with the result that certain Flour Mills remain shut down and that the rest are working short time only, with depleted staffs.

Directors.—Mr. Eric Studd, being out of Calcutta, has not signed the Accounts.—Balmer, Lawrie & Co., Ld., Managing Agents.

Extract from Directors' report:

Report—For the year ended 31st December, 1933.

Plant.—The new generating set of 720 B.H.P. capacity, referred to in the last Report, was put into operation in August and has since given satisfactory service.

The Directors have under consideration measures whereby the three 150 B.H.P. sets purchased second-hand in 1921, will be replaced, in due course, by up-to-date plant of higher efficiency.

Land.—Additional land adjoining the Power Station premises was purchased in order to provide space for the present and future development of the Company.

Consumers.—349 new connections were made during the year, bringing the total number of consumers up to 3,549 on 31st December.

Street Lighting and Distribution.—8 additional Street Lights were installed during the year bringing the number of lamps in circuit to 13,10.

19 extensions to the distribution net-work were added to the system which satisfactorily withstood, without serious trouble or breakdown, a very severe test during the monsoon and particularly during the period of the Tapti River floods on 18th/19th September.

Municipal Contract.—Negotiations between the Municipality and the Company for a reduction in rates for Street Lighting have continued during the year. The Contract expires in April, 1937 and the Board, though under no obligation to do so in terms of the Contract have made the Municipality certain offers of substantial reductions which have not been accepted.

The Directors feel that if the interests of the Municipality and the Shareholders of this Company receive mutual consideration, it should not be difficult to arrange for a new Contract on terms which will prove beneficial to both parties.

General.—Conditions during the year as affecting your Company's operations were slightly better than those obtaining during 1932.

Accounts.—The Accounts show that after setting aside Rs. 1,39,603-11-9 to Depreciation and Rs. 45,000 to Reserve, the balance carried from the Profit and Loss Account to the Balance Sheet is Rs. 79,487-6-4. By adding to this the sum of Rs. 21,586-7-11 brought forward from last year's Accounts, a sum of Rs. 1,01,073-14-3 is available for disposal, which the Directors propose to apply as follows:—To payment of dividend at the rate of 6½ per cent. per annum, free of Income-tax, on Preference Shares Rs. 32,500, to payment of a dividend at the rate of 8 per cent. per annum, free of Income-tax, on the Ordinary Shares on amounts paid up Rs. 61,000 balance to be carried forward Rs. 7,573-14-3, total Rs. 1,01,073-14-3.—E. C. Reid, Purshotamdas Thakurdas, J. P. Bradshaw, Ramdas Narandas, C. M. Gandhi, C. N. Moberly, Frederic F. Stileman, Directors. Killick, Nixon & Co., Agents.

***Extracts from Director's Report*:**

Report—For the year ended 31st December, 1933.

Fire Revenue Account.—Net Premiums, after deducting all reinsurances, amounted to Rs. 3,04,922-3, while Losses Paid and Outstanding amounted to Rs. 22,771-4-7, representing a Loss Ratio of 7.5 per cent.

The Fire Insurance Fund now stands at Rs. 1,82,953-5-0, being 60 per cent. of the Premium Income. The Expenses of Management, together with Commission, amounted to Rs. 1,33,500-3-11, and a sum of Rs. 13,616-2-6 has been transferred to the Profit and Loss Account.

Marine Revenue Account.—The policy adopted in 1932 of reinsuring in full all Marine Policies was maintained for the greater part of the period under review. Consequently, the figures shown are not representative of a full year's working. Net Premiums, after deducting all reinsurances, amounted to Rs. 2,492-11-0. Expenses Rs. 105-14-0, leaving a balance of Rs. 2,386-13-0 which has been transferred to the Marine Insurance Fund. Losses during the period were nil.

Accident Revenue Account.—Net Premiums, after deducting all reinsurances, amounted to Rs. 23,538-3-6, and Losses Paid and Outstanding to Rs. 3,784-11-8, representing a Loss Ratio of 16.1 per cent. Expenses of Management, together with Commission, amounted to Rs. 8,455-12-11, leaving a balance of Rs. 11,297-10-11 representing 48 per cent. of the Premium Income. This sum has been transferred to the Accident Insurance Fund.

Profit and Loss Account.—After making the necessary Reserve for Income-tax, a balance of Rs. 9,511-11-6 has been carried forward.

Securities.—Securities are valued at cost which at the close of the year was under their market value.

Funds.—The comparative table below shows that the Company's Funds have increased during the year by Rs. 2,77,023-12-11 (Rs. 1,20,000 on Capital Account and Rs. 1,57,023-12-11 as a result of the year's operations):—

	1933			1932

Total ...	15,08,927	Total ...	15,08,927

Extracts from Directors' Report :

Report—For the half-year ended 31st December, 1933.

After providing Rs. 45,000 for Depreciation the balance at credit of Profit and Loss Account is Rs. 40,321-2-7 to which has to be added the sum of Rs. 11,334-0-9 brought forward from the previous account, making a gross total of Rs. 51,655-3-4.

From this has to be deducted Rs. 14,345-4-8 for Commission, leaving a balance of Rs. 37,309-14-8 with which it is proposed to deal as follows:—To pay a Dividend of Rs. 3 per cent. per share, making a total of 6 per cent. per annum Rs. 25,200, to carry forward in Profit and Loss Account Rs. 12,109-14-8, total Rs. 37,309-14-8.

The signs of revival in the Boating Trade to which reference was made in our last Report, proved to be only temporary, and Traffic generally showed no better results than in the first half of the year.

Our hope of employing the whole fleet did not therefore materialise. The fleet was, however, maintained in first class condition.

At the time of writing the Report, Traffic has improved slightly, but it is difficult to gauge whether this improvement will be maintained.—Hoare, Miller & Co., Ld., Managing Agents.

Extracts from Directors' Report :

Report—For the half-year ended 31st December, 1933.

Accounts.—The Revenue Account shows a profit of Rs. 41,108-1-7 and the Profit and Loss Account shows an available balance of Rs. 1,35,456-11-1, which the Directors propose to dispose of as follows:—In paying a dividend of 3 annas per share, free of Income-tax, on 150,000 Ordinary Shares, issued as at 31st December, 1933, Rs. 28,125, in paying a dividend of 9 annas per share, free of Income-tax, on 50,000 Founders' Shares, issued as at 31st December, 1933, Rs. 28,125, in carrying forward Rs. 79,206-11-1, total Rs. 1,35,456-11-1.

Religara.—The area of 4,045 bighas in Mouzas Religara Dari and Gidi, which was sub-leased to the B. B. & C. I. and M. & S. M. Railways, has been relinquished by them with effect from the 29th anuary, 1934.—G. B. Morton, W. M. Craddock, E. L. Watts, Directors. Bird & Co., Managing Agents.

PLANTERS STORES AND AGENCY CO., LD.

The report for the half-year ended 30th September last shows a profit of £5,634; this compares with £4,221 for the preceding six months and with £3,748 for the corresponding half-year in 1932. With £83,020 brought in there is £88,654 available, of which the half-yearly Preference dividend absorbs £1,000. The directors recommend a dividend on the Ordinary shares of 5 per cent. (the same), carrying forward £82,654. The report states that tea restriction has improved prices, particularly for common teas, and that prospects appear somewhat brighter. Floating assets, £422,000; current liabilities (including an Income-tax reserve of £18,580) £242,000.

TIRRIHANNAH CO., LD.

Report—For the year ended 31st December, 1933, shows a profit on Revenue Account of Rs. 34,474-7-11, from this there has been placed:—To Reserve for Taxation Rs. 2,300, to adjustment for Season 1932 Rs. 886-9-2, total Rs. 3,186-9-2, balance Rs. 31,287-14-9, deduct balance brought forward from last year Rs. 3,34,394-3-3, leaving a balance of Rs. 3,03,106-4-6, to be carried forward to next Account.

Under the scheme for the Restriction of Exports and Crop, the Company was allowed to produce 5,879 maunds. A crop of 5,266 maunds was made against 7,062 maunds in 1932.

The crop was sold in Calcutta, the average price realized being—

Tirrihannah Division 3,076 maunds at As. 8-5 per lb.
Marionbarie Division 2,190 maunds at As. 8-1 per lb.
compared with As. 4-1 and 4-3 per lb. respectively in 1932.

The estimate for next year provides for only a small quantity of tea ti be made and the resources of the Company in labour to be concentrated on the replanting of a large area at Tirrihannah Division.

The past two years of enforced economy in upkeep and lack of manures has so debilitated the very old and poor jat areas as to make it uneconomic to go with the attempts made during recent years to renovate such areas.

It has been decided, therefore, to take the opportunity presented by the Regulation of Exports scheme to replace these poor areas. The shortage of labour has in the past curtailed any operations in replanting or extensions. By manufacturing tea only at the beginning and end of the season, when the best quality is made, and when labour is available from cultivation work, we shall be able to concentrate all labour on replanting and cultivation during the rains. The sale of Export Rights not required to cover the tea that will be made, will provide finance for these operations.

To continue to work the Estates in the normal way even for the period of the Restriction Scheme would mean having a property at the end of that time so debilitated as to be incapable of further economic production. We are not prepared to add to the large debt already owing to us by further financing what is in fact a wasting asset. The scheme evolved therefore provides for the eventual rehabilitation of the property without adding to existing debt. At the same time it will mean a smaller area to keep up which will produce a larger crop, all under better control and possibly with a single factory ,compared with the existing 1,300 acres of scattered areas with two Factories.—Begg Dunlop & Co., Ld., Managing Agents.

TEEN ALI TEA CO., LD.

Extracts from Directors' Report :

Report for season 1933.

Crop.—Under the crop control scheme, which was brought into operation as from Season 1933, the Company was permitted to manufacture 3,098 maunds (2,609 maunds for exports and 489 maunds for non-export) and it made 3,373 maunds, the difference being covered by the purchase of Production Rights. 3,012 maunds were exported and consequently Export Rights were purchased to conform with the original quota.

While a fair standard of manufacture was maintained throughout the season, quality continues to be a little disappointing. On a greatly improved market the teas realized an average price of 10 annas 9 pies a lb. as compared with 6 annas 8 pies a lb. obtained for the previous year's crop.

Area.—No extensions were put out during the year. and the area under cultivation remains at 507.34 acres as before.

Accounts.—The receipts amounted to Rs. 1,80,742-14-1 and the expenditure to Rs. 1,30,718-14-4, showing a balance at credit of Revenue Account of Rs. 50,023-15-9. Adding to this Rs. 11,436-9-9 brought forward from the previous year, and deducting Manager's Commission Rs. 3,127-6-3, Managing Agents' Commission Rs. 1,000-7-9, subscriptions to Octavius Steel & Co., Ltd., Provident Institution Rs. 420, total Rs. 4,547-14, there remains a balance of Rs. 56,912-11-6 at credit of Profit and Loss Account, which the Directors recommend should be disposed of follows:—Pay a Dividend of 7½ per cent. for Season 1933 Rs. 22,500, write off Machinery and Factory Account Rs. 20,000, carrying forward Rs. 14,412-11-6, total Rs. 56,912-11-6.

The Estimates for Season 1934 are for a crop of 3,139 maunds to cost Rs. 1,43,948.

Export quotas under the Regulation of Exports Scheme have not yet been allotted nor has any official decision been arrived at in regard to restriction of producing for the coming Season—hence the figures of estimated crop are subject to revision at a later date.

Labour.—635 hands were employed on the garden at 31st December, 1933.—S. S. Hodson, N. D. Gye, J. Macgregor, Directors. Octavius Steel & Co., Ltd., Managing Agents.

Extracts from Directors' Report :

Report for Season 1933.

Crop.—Under the crop control scheme, which was brought into operation as from Season 1933, the Company was permitted to manufacture 3,039 maunds and it made 3,264 maunds, the difference being covered by the purchase of Production Rights.

There was a distinct improvement in the quality of manufacture and a useful standard was maintained throughout the season. On a greatly improved marked the teas sold for an average price of 8 annas 6 pies a lb. as compared with 4 annas 3 pies a lb. obtained for the previous year's crop.

Area.—No extensions were put out during the year, and the area under cultivation remains at 447 acres as before.

Accounts.—The receipts amounted to Rs. 1,38,683-1-8 and the expenditure to Rs. 95,155-4, showing a balance at credit of Revenue Account of Rs. 43,527-13-8. After allowing for:—Debit balance brought forward from previous year Rs. 11,061-14-9, Manager's Commission Rs. 2,889-9, subscriptions to Octavius Steel & Co., Ltd., Provident Institution Rs. 324, total Rs. 14,275-7-9, there remains a balance of Rs. 29,252-5-11 at credit of Profit and Loss Account which the Directors recommend should be disposed of as follows: —Pay a dividend of 2½ per cent. for Season 1933 Rs. 8,750, place to General Reserve Account Rs. 15,000, write off Preliminary Expenses Account Rs. 2,233-12-3, carry forward Rs. 3,268-9-8, total Rs. 29,252-5-11.

Season 1934.—The Estimates for Season 1934 are for a crop of 3,080 maunds to cost Rs. 95,706.

Export quotas under the Regulation of Exports Scheme have not yet been allotted nor has any official decision been arrived at in regard to restriction of production for the coming season hence the figures of estimated crop are subject to revision at a later date.

Labour.—504 hands were employed on the garden at 31st December, 1933.—B. C. Studd, S. S. Hodson, J. Macgregor, Directors. Octavius Steel & Co., Ltd., Managing Agents.

		Profit and Loss	42,602
Total	3,51,796	Total	3,51,796

Extracts from Directors' Report :—

Report for Season 1933.

Crop.—Under the crop control scheme which was brought into operation as from Season 1933, the Company was permitted to manufacture 2,145 maunds (1,806 maunds for export and 339 maunds for non-export) and it made 1,957 maunds. The surplus Production Rights were sold for cash. Fine plucking and unfavourable weather for growth were responsible for the short crop.

There was a distinct improvement in the standard of manufacture on that of the previous season, and meeting a very much improved market the teas realized an average price of 8 annas 4 pies a lb. as compared with 3 annas 10 pies a lb. obtained for the 1932 crop.

Area.—No extensions were put out during the year, and the area under cultivation remains at 485 acres as before.

Accounts.—The receipts amounted to Rs. 83,727-14-4 and the expenditure to Rs. 62,994-10-6, showing a balance at credit of Revenue Account of Rs. 20,733-3-10. After adding to this Rs. 250, being proceeds of sale of Motor Lorry, and deducting:—Debit balance brought forward from the previous year Rs. 61,042-6-9, Manager's Commission Rs. 1,180. Managing Agents' Commission Rs. 1,036-10-6, subscriptions to Octavius Steel & Co., Ltd., Provident Institution Rs. 326-10, total Rs. 63,585-11-3, there is a balance of Rs. 42,602-7-5 at debit of Profit and Loss Account which is carried forward.

Season 1934.—The Estimates for Season 1934 are for a crop of 2,173 maunds to cost Rs. 68,691.

Export quotas under the Regulation of Exports Scheme have not yet been allotted nor has any official decision been arrived at in regard to restriction of production for the coming season—hence the figures of estimated crop are subject to revision at a later date.

Labour.—586 hands were employed on the garden at 31st December, 1933.—S. S. Hodson, J. Macgregor, Directors.—Octavius Steel & Co., Ltd., Managing Agents, Calcutta, 15th March, 1934.

KALLINUGGER AND KHOREEL TEA CO., LTD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital	3,00 000	Block	2,97,000
Reserves	55,000	Crop Account	36,390
Debts	18,388	Outstandings	9,766
Profit and Loss	25,133	Cash	55,365
Total	3,98,521	Total	3,98,521

Extracts from Directors' Report:

Report for the year ended the 31st December, 1933.

The Revenue Account shows a Profit of Rs. 25,003-13-4, to which has to be added the Balance standing at the Credit of Profit and Loss Account Rs. 1,802-9-7, total Rs. 26,806-6-11, deducting Income-tax Rs. 1,673-1, there remains for disposal the sum of Rs. 25,133-5-11. It is proposed to set aside to General Reserve Rs. 10,000, and the Directors and the Managing Agents recommend payment of a Dividend of 5 per cent. Rs. 15,000, carrying forward in Profit and Loss Account Rs. 133-5-11, total Rs. 25,133-5-11.

The Company agreed to support the Crop Restriction Scheme but the Estate was again unfortunate in having a repetition of the calamities of the year before, *viz.*, drought in the early part of the year, followed by two severe hailstorms, and the crop realised therefore fell short of the restricted outturn of 2,548 maunds by some 95 maunds.

Seven acres of unprofitable tea were uprooted and replanted with the exception of a quarter of an acre.

The following is a comparative return of the tea marketed and average prices realised for the last three years:—

	1933	1932	1931
Maunds	2,454	2,512	3,080
At per lb.	-/8/9	-/4/5	-/4/6

The Estimate for the current season provides for a crop of 2,548 maunds, the quantity to which it was restricted in 1933, to cost Rs. 89,905 laid down in Calcutta. In this connection it will not be possible to maintain costs at the extremely low figures of the past 2 years. The time has come for certain essential expenditure which can no longer be postponed.—C. G. Arthur, B. E. Tomlinson, F. M. Buckland, Directors. Jardine Skinner & Co., Managing Agents.

CHANDPORE TEA CO., LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Ri.
Capital	2,50,000	Block	2,18,138
Reserves	73,317	Crop Account	37,228
Debts	26,879	Outlay	560
Profit and Loss	35,137	Outstandings	8,371
		Cash	1,21,036
Total	3,85,333	Total	3,85,333

Extracts from Directors' Report:

Report for the year ended the 21st December, 1933.

The Revenue Account shows a Profit of Rs. 39,311-10-11, from which has to be deducted:—The Balance at Debit of Profit and Loss Account Rs. 1,582-5-8, Income-tax Rs. 2,591-1, total Rs. 4,174-6-8, leaving for disposal Rs. 35,137-4-3. It is proposed to set aside to General Reserve Rs .15,000, and the Directors and the Managing Agents recommend payment of a Dividend of 7½ per cent. Rs. 18,750, carrying forward in Profit and Loss Account Rs. 1,387-4-3, total Rs. 35,137-4-3.

Except for a somewhat severe drought in the early part of the season, climatic conditions were generally favourable and the crop realised was some 403 maunds in excess of that allowed under the Restriction Scheme, to which the Company subscribed. The necessary rights were purchased to enable the additional crop to be marketed.

During the year the opportunity was taken of securing, at a reasonable figure, a second-hand boiler in good condition to serve as a stand-by.

The following is a comparative return of the tea marketed and average prices realised for the past three years:—

	1933	1932	1931
Maunds	4,114	4,669	4,445
At per lb.	-/8/3	-/4/4	-/4/10

For the current season the Estimate provides for a crop of 3,710 maunds, the amount to which the Estate was restricted in 1933, to cost Rs. 1,26,504 laid down in Calcutta. In this connection it will not be possible to maintain costs at the extremely low figure of the past 2 years. The time has come for certain essential expenditure which can no longer be postponed.—C. G. Arthur, F. M. Buckland, B. E. Tomlinson,, Directors. Jardine Skinner & Co., Managing Agents.

DUNBAR MILLS, LD.

Synopsis of Balance Sheet:

Liabilities	Rs.	Assets	Rs.
Capital	19,00,000	Block (net)	20,15,030
Debentures	7,56,000	Cotton and Yarn	10,35,231
Reserves	16,55,068	Stores	1,53,645
Other Debts	1,03,270	Outstandings	1,56,486
		Cash and Invests.	10,21,772
		Profit and Loss	32,174
Total	44,14,338	Total	44,14,338

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1933, shows a loss of Rs. 36,743-15-8, from this has to be deducted the balance brought forward from the last account, namely, Rs. 4,569-10-1, which leaves a debit balance to be carried forward to the next account of Rs. 32-174-5-7.

Provision has been made for Depreciation by a transfer of Rs. 40,000 from Reserve Fund Account.

The "weaving" extension referred to in our last report is now well advanced, and it is hoped that it will be running before the close of the current half-year. The addition to "Block Account" is composed of expenditure under this head.

Throughout the period under review in addition to the general economic depression which is affecting the whole world, trading conditions in connection with the manufacture and sale of cotton goods have been particularly disturbed. In America the efforts of the Roosevelt Administration to resuscitate trade by means of various Codes and Regulations have resulted in continuous fluctuations in the rates for raw material, whilst in India the negotiation connected first with the Clare-Lees/Mody Pact and then with the Indo-Japanese Agreement have produced such uncertainty that buyers have reduced their demands to a minimum and prices for goods have in consequence ruled consistently below cost. That these measures will result in any benefit to the indigenous manufacturing industry is extremely doubtful and the outlook at the moment is anything but hopeful.—V. H. Maccaw, M. H. Hughes, G. L. Scott, Directors.

NEW RING MILL CO., LD.

Synopsis of Balance Sheet:

Liabilities.	Rs.	Assets	
Capital	6,00,000	Block (net)	5,45,108
Reserves	2,84,290	Stores	43,489
Debts	4,666	Outstandings	5,363
Profit & Loss	1,350	Cash & Invests	2,66,346
Total	8,90,306	Total	8,90,306

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1933, after reserving Rs. 9,310-11 for Income-tax, shows a loss of Rs. 670-13, deducting this from the credit balance brought forward from the last account, nameely, Rs. 2,021-1-1, there remains a credit balance to be carried forward to the next account of Rs. 1,350-4-1.

Throughout the period under review in addition to the general economic depression which is affecting the whole world, trading conditions in connection with the manufacture and sale of cotton goods have been particularly disturbed. In America the efforts of the Roosevelt Administration to resuscitate trade by means of various Codes and Reegulations have resulted in continuous fluctuations in the rates for raw material, whilst in India the negotiations connected first with the Clare-Lees/Mody Pact and then with the Indo/Japanese Agreement have produced such uncertainty that buyers have reduced their demands to a minimum and prices for goods have in consequence ruled consistently below cost. That these measures will result in any benefit to the indigenous manufacturing industry is extremely doubtful and the outlook at the moment is anything but hopeful.

In these circumstances the Company's Mill has remained closed throughout the half-year.—V. H. MacCaw, M.A. Hughes, G. L. Scott, Directors.

BOWREAH COTTON MILLS CO., LD.

Synopsis of Balance Sheet:

Total	47,82,282	Total	47,82,282

Extracts from Directors' Report:

Report for the year ended 31st December, 1933.

The result of the yar's working has been a profit on Revenue Account of Rs. 3,31,834-11-10, less—Obligation Interest and Income-tax and Super-tax Rs. 20,932-2, balance Rs. 3,10,902-9-10, to which has to be added the balance brought forward on Profit and Loss Account Rs. 1,66,630-15-11, leaving an available balance of Rs. 4,77,533-9-9. We recommend that this should be disposed of as follows:—Dividend on Ordinary Shares at the rate of 12½ per cent. per annum, or Rs. 37-8 per share free of Income-tax Rs. 1,35,000, transfer to Depreciation Rs. 1,60,000, carry forward to credit of Profit and Loss Account Rs. 1,82,533-9-9, total Rs. 4,77,533-9-9.

Jute has been taken into account at less than cost price and Goods in stock and process at valuation.

In accordance with the Indian Jute Mills Association's Short-time Agreement the Mill worked 40 hours per week with 15 per cent. of the total looms sealed.—S. D. Gladstone, T. S. Gladstone, R. N. Mookerjee, G. L. Scott, Directors.

BENGAL NAGPUR COTTON MILLS, LD.

Synopsis of Balance Sheet:

LIABILITIES.	Rs.	ASSETS.	Rs.
Capital	12,00.000	Block (net)	10,98,802
Debentures	4,00,000	Stocks	13,77,203
Reserves	7,00,000	Stores	1,07,644
Other Debts	5,65,400	Outstandings	42,447
Profit & Loss	34,871	Cash & Invests	2,74,175
Total	29,00,271	Total	29,00,271

Extracts from Directors' Report:

Report for the half-year ended 31st December, 1933.

The working for the half-year, after adding Debenture Interest and Depreciation, shows a loss of Rs. 76,637-10-1, Interest on Investments and a transfer from Contingency Reserves no longer required converts this adverse balance into a credit of Rs. 28,794-1-5, to which has to be added the amount brought forward from last half-year Rs. 6,076-5-3, making a total of Rs. 34,871-0-8, which we recommend should be dealt with as under:—In payment of a dividend on the Preference Shares at the rate of 7 per cent. per annum, free of Income-tax Rs. 10,500, leaving to be carried forward Rs. 24,371-0-8.

Trading Conditions.—During the period under review there was more enquiry for both Yarn and Cloth, but on account of the large stocks of unsold goods held by the trade generally sales could only be effected at reduced prices. Once again, we have been obliged to write down the value of stocks of both Yarn and Cloth, and consequently trading results have been adversely affected. Since the close of the half-year there has been an improvement in demand and off-take, but not as yet of sufficient extent to allow of any improvement in selling prices.

General.—With regard to the State's request that Excise Duty should be levied on the Mills' production retrospectively from December, 1925, we have received a letter from the Agent to the Governor-General informing us that after careful consideration in Council, the Secretary of State for India has rejected the Memorial submitted by the Ruling Chief of Nandgoan State.

Mosquito Netting Plant.—We have to report the purchase of a mosquito net making plant of ten machines. This plant, together with the preparatory machinery, has been installed and is practically ready to commence working.—Shaw Wallace & Co., Managing Agents.

BENGAL PAPER MILL CO., LD.

Synopsis of Balance Sheet:

LIABILITIES.	Rs.	ASSETS.	Rs.
Capital	15,00,000	Block (net)	10,31,128
Debentures	6,00,000	Paper	5,08,722
Reserves	5,82.293	Stores & Paper. making Materials	5,74,823
Other Debts	7,85,381	Goods in Transit	2,07,575
Profit & Loss	1,35,332	Outstandings	6,95,364
		Investments	5,250
		Cash & Deposits	5,80,144
Total	36,03,006	Total	36,03,006

Extracts from Directors' Report:

The Directors submit herewith the Audited Accounts for the half-year ended 31st December, 1933, which, after sundry adjustments, and the addition of the balance brought forward from the previous half-year, less Debenture interest, amounting to Rs. 18,000, show a balance at credit of Profit and Loss Account of Rs. 2,57,331-8-3, with which we propose to deal as follows:—To Depreciation on Buildings Rs. 15,000, Depreciation on Machinery Rs. 60,000 reserve for Bamboo Plant Rs. 37,000, reserve for Improvements and Extensions Rs. 10,000, dividend on original Preference shares at 7 per cent. per annum Rs. 7,000, dividend on "A" Preference shares at 7 per cent. per annum Rs. 14,000, dividend on Ordinary shares at 20 per cent. per annum Rs. 90,000, balance carried forward Rs. 24,331-8-3, total Rs. 2,67,331-8-3.

Manufacture.—The competition from abroad, especially from Japan, indicated in our last report, has become more acute, with the result that reduced prices for our paper are reflected in the present report. As long as the yen continues abnormally depreciated, there is unlikely to be any improvement. To-day, prices have, if anything, a further downward tendency. Every effort is being made to reduce costs and to increase our paper outturn. Paper stocks, although not quite so high as at the end of the previous half-year, continue heavy. But for the drop in outturn they would have been over the previous half-year's figure. Special efforts continue to stimulate larger sales, without too seriously sacrificing prices.

Mill Renovations and Improvements.—These continue, and have further improved and qualities of our paper.

Bamboo Pulp Mill.—The erection of the main building is practically completed, but unforeseen delays have arisen in connection with the Soda Recovery Building and Plant.

COST OF PROTECTION VS. COST OF LAISSEZ-FAIRE

Sir George Schuster, in the course of his speech introducing the central budget, referred to the decline in revenue from the sugar import duty as "the great cost of protection." Though he was careful to avoid a condemnation of protective duties on this ground, the expression would be handy to those anxious to harm the protected industries and would generally heighten the prejudice against the most handy means of developing Indian industry. Obviously, mere cost, in the sense of outlay, however high, does not prove anything. The justification of cost lies in the margin which the selling price leaves over the cost. To talk of the "great cost of protection" without reference to its yield or to the cost of the alternative that we have to protection, is to be guilty of *suggestio falsi*.

Before one is taken in by the cost of protecting any industry, be it sugar or cotton or iron and steel, one must consider that it has to be set by side with the cost of *laissez faire* ; and it is common sense that if the latter is more, the former, however high absolutely, would still be worth incurring.

In contrast to the use of such loose phraseology by the Indian Finance Member, consider the following statement which the Federal Minister of Trade and Customs made when introducing the Tariff Act of 1920 in the Federal Parliament of Australia, a country where "each successive Federal Government has supported a protectionist policy": "Time and again Australia lost golden opportunities during the War because we had not the foresight and wisdom in the past to set to work and develop our resources in a manner which was quite possible for us," or, "we cannot afford to pay out this immense sum of money for imported goods," or again, "this money to-day is being sent out of Australia to furnish employment for people in other lands and develop the resources of other countries."

These radically opposite views on protection held by two high personages in more or less analogous positions in the respective countries merely serve to make one painfully conscious of the great gulf that separates the political status of India from that of the colonies. No doubt, both were anxious to interpret the will and sentiment of their masters. Only, in one case the masters happened to be the people of Australia ; but in the other, whoever else they may be, they are certainly not the people of this country.

We live to-day in a world where Free Trade or *Laissez-faire* stands thoroughly discredited and disgraced. On all sides, one hears of new phrases such as "social control of business," "economic control," "planned economy" and so on. All this signifies attempts to apply economic science to the solution of practical problems.

Moreover, the declared policy of the people of India is to reconstruct her national economic life from an archaic and primitive agricultural state to one of industrial-agricultural state in which there will be maintained a proper balance between these two great divisions of the national economy. They have seen, all too clearly and painfully, the havoc which *laissez-faire* has wrought, down the past century and a half, to her economic life and the arrest of her economic progress. Their pent-up feelings of resentment and opposition ultimately found expression in the great surge of the "Swadeshi" movement inaugurated at the commencement of the present century. With the concession of fiscal autonomy to India a decade ago, they have "plumped" for protection to the country's great basic industries such as the manufacture of matches, textiles, steel and sugar. They have a right to expect that this policy should be given an honest, earnest and fair trial by the Government.

But since the Government seem to stand wavering between *laissez-faire* and the policy of "discriminating protection" which is, at best, but free trade once removed, the people should stop to consider the enormous loss and waste to the country which the former involves when applied, as for instance, to the Indian sugar industry. This is clearly brought out in the following extract from a lecture before the Royal Society of Arts given by Sir James Mackenna, C.I.E., who was Agricultural Adviser to the Government of India and the original President of the Indian Sugar Committee.

> "...... But to check import of foreign sugar, the establishment of modern efficient factories is the only way to solve the problem. India at present is not making the fullest use of her raw material ; the waste that is going on is simply colossal ......
>
> "As Mr. Noel Derr has pointed out, by following the present cane-crushing and gur-boiling processes, India makes 2,500,000 tons gur (10 tons cane per acre as average yield and 10 maunds of gur as the average outturn from 100 maunds cane). The gur at the average value of Rs. 5 per maund, or Rs. 140 per ton,

Thompson BOILERS & ACCESSORIES
FAIRLIE HOUSE, FAIRLIE PLACE, CALCUTTA

fetches Rs. 35,00,000,000. If the produce of these 25 million acres is converted into sugar in an efficient modern factory (recovery 9 per cent. on the weight of cane) 2,250,000 tons of sugar and 820,000 tons molasses will be turned out. Taking the selling price of sugar at Rs. 300 per ton, we get a value of Rs. 67,50,00,000 and molasses at Re. 1 per maund or Rs. 228 per ton will be worth Rs. 2,20,60,000= Rs. 69,70,60,000, or Rs. 34.8 crores more than can be realised from gur. No other country in the world could stand such colossal waste of available raw material. The responsibility which rests on all concerned for putting an end to this state of things is great. There are at present only 40 sugar factories and refineries and their combined output is hardly 100,000 tons per annum, while India imports over 800,000 tons a year. It will thus be clear that there is ample scope for many more factories and they will not have to look for outside markets, as the demand for the sugar turned out in Indian factories is at their very doors."

From the foregoing it is clear that, so long as India persists in manufacturing gur and sugar by the indigenous process she must suffer ever recurring economic loss and wastage of a colossal magnitude. All the money and effort expended in research to improve the quality of the cane and in propaganda for the removal of the cultivators' ignorance and inertia must be deemed to be sheer waste, so long as gur boiling and other crude processes of sugar production prevail. Add to this, the value of the imported sugar which reached nearly a million tons per annum, one then obtains a fair estimate of the huge economic drain which *laissez-faire* entails on the country in a single basic industry, *viz.*, the production of sugar.

Theorists and protagonists of free trade or *laissez-faire* will no doubt reply to the above with the usual wealth of sterile arguments which have no place to-day outside the lecture-rooms. But, before they indulge in such academic exercises, they would do well to study the growth and development of the Australian sugar industry which furnishes an outstanding example of success in the practical application of protection and control exercised by a wise national government over its economic life. Under its fostering care, the Australian sugar industry has expanded from an output of 139 thousand tons per annum average for the quinquennium, 1901-06, to 518 thousand tons in 1920-26; imports of sugar have ceased entirely and in its place an annual export trade to the tune of 150 to 200 thousand tons has grown up. Effective control over the industry has enabled the growers, millers, refiners, grocers, workers and the general consumers to obtain their requirements at fixed prices which compare favourably with world prices. And, what is more significant, it has been achieved without bolstering up inefficiency which is said to be the inevitable price of protection according to the protagonists of *laissez-faire*. The fact that in 1926, 37 mills in Queensland produced nearly 500,000 tons of raw sugar as against an output of 120,000 tons only in 1901 by 61 mills is proof sufficient that uneconomic mills have been eliminated and production confined to those which are more efficient.

On the point of burden on the Australian consumer, the following table from Mr. Skene Smith's "Economic Control" should be conclusive.

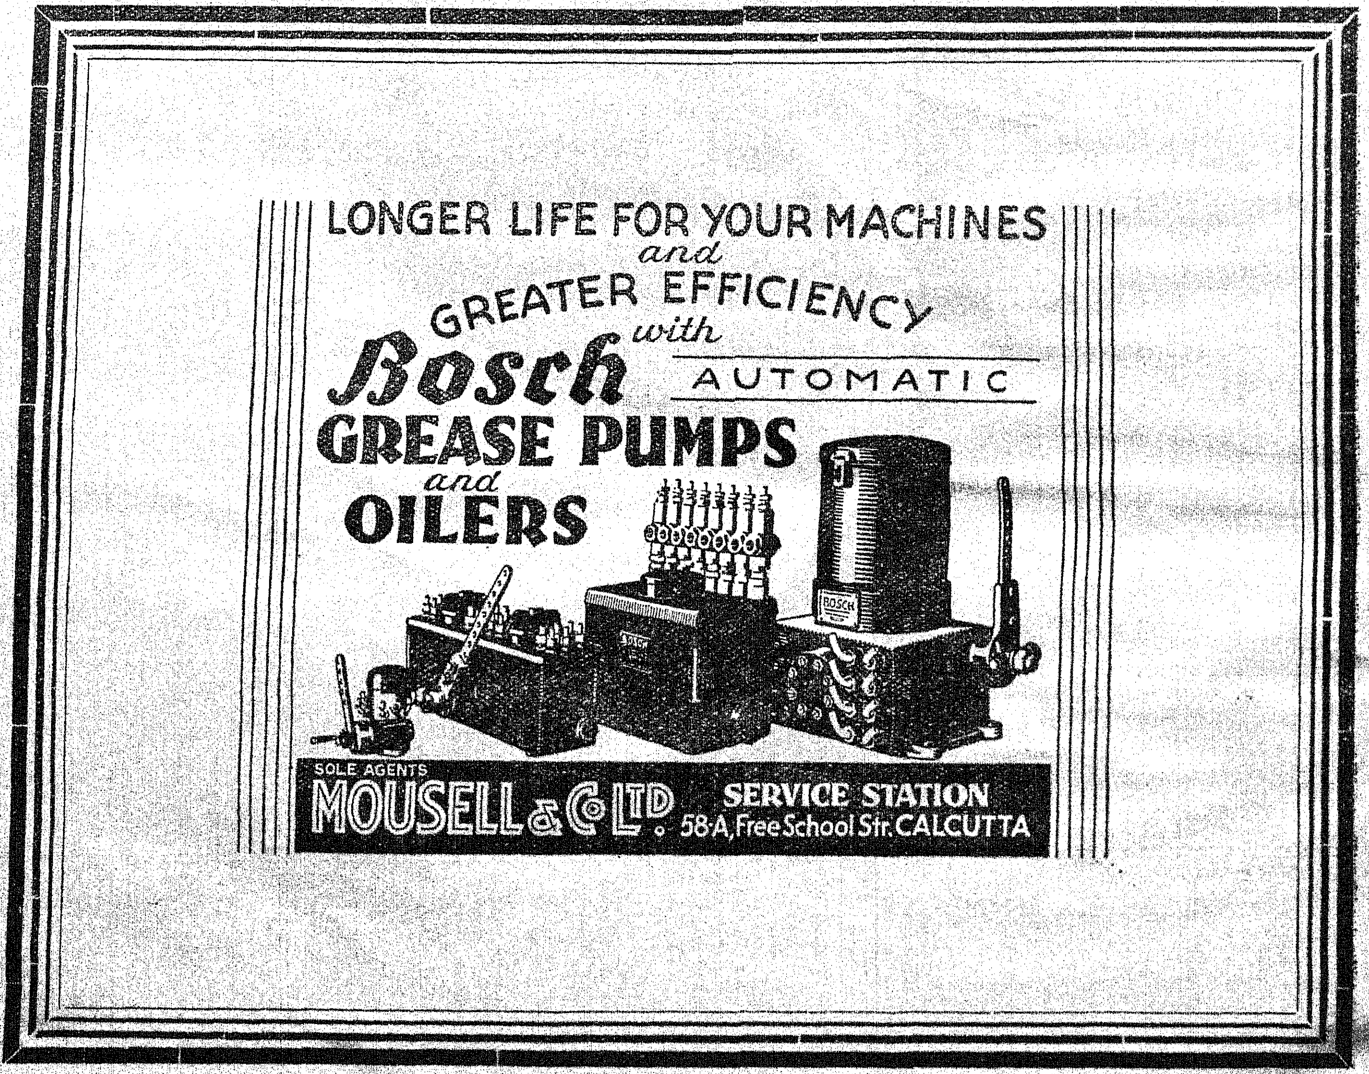
WORLD RETAIL PRICES OF SUGAR

(from various official statistics)

	1919 d.	1924 d.	1927 d.
U.S.A. including a duty of approximately ⅓d. per lb. ...	5	4½	3½
Canada, including a duty of approximately 1d. per lb. ...	6¼	5½	4¼
New Zealand (free of duty) ...	4	4¼-4¾	3¼-3½
U.K. Including duty of approximately 1¼d. per lb. ...	7	4¾-7	3¾-5
Australia, including a duty of approximately ⅔d. per lb. and an embargo since 1924 ...	3½	4½	4½

Commenting on this Mr. Smith rightly concludes as follows:

> "In times of scarcity the Australian consumer gets his sugar cheaper through the existence of a home



LONGER LIFE FOR YOUR MACHINES *and* GREATER EFFICIENCY *with* Bosch AUTOMATIC GREASE PUMPS *and* OILERS

SOLE AGENTS MOUSELL & Co LTD. SERVICE STATION 58-A, Free School Str. CALCUTTA

industry. To-day (1926?) he probably has to pay about one penny per lb. more than if he were able to import from abroad, a sum which is in the nature of an indirect taxation, and is used to support the industry. Thirdly, the Australian public is interested in the economic development of Australia".

An important side issue of a home sugar industry is that the molasses may be converted at a reasonable cost into power alcohol and the waste cane-fibre (bagasse) into "Celotax" boards, which, on account of their strength and insulating properties, constitute an excellent building material and substitute for soft woods. Bagasse is also a raw material for the manufacture of cellulose from which artificial silk is made. With the coming separation of Burma, India will be seriously deficient in the home supply of petroleum and will have to face the problem of making up this deficiency by developing alternative source of supply of liquid fuel. The development of the Indian sugar industry is, therefore, a forward step taken in that direction.

No apology is needed in quoting below the conclusions of Mr. Smith on his review of the practical application of governmental control and policy of protection as applied to the Australian sugar industry

> "The sugar industry may be said to depend for its existence upon economic control, of which it is the most interesting example to be found anywhere in the common-wealth. Control has possibly been costing the consumer about 1d. a lb. which at the rate of consumption of 117 lb. per head amounts to about 10s. per annum per consumer. In return for this, it is declared, Australia can maintain in the sugar areas of Queensland about 100,000 persons, who unlike the inhabitants of other sugar producing areas of the world, exert a powerful demand for the products of Australia. The inhabitants of other sugar areas are, it is true, paid for their sugar by goods and services, but their demand for Australian products would not be so strong as that of Australian sugar producers. If Australia had no sugar industry it is unlikely that her production of other things would be noticeably greater than at present, and she would have to import sugar instead of certain other goods which are now imported in return for her exported produce. In addition, there is the possibility that the Australian national income will be increased through the production of motor fuel and housing material within her borders. It seems that these advantages, coupled with the future possibility of a world increase in the price of sugar as a result of attempts at combination among the sugar producers of the world will more than compensate for the present tax on consumers."

The aptness of the above observations of a competent authority should furnish food for reflection to those who are likely to be misled by Sir George Schuster's reference to the "great cost of protection." Since the cost of *laissez-faire,* as we have seen, is even greater and since free trade has had its chance in India for a sufficiently long time, let protection, the declared policy and will of the people of this country, have a square deal, before it is condemned or wittled down.

PROPOSED EXCISE DUTY ON INDIAN SUGAR, AND REGULATION OF CANE PRICES

The honourable Finance Member in the course of his budget proposals for the Government of India for the year 1934-35 announced that the Government of India propose to impose an excise duty on the production of sugar in India at the rate of Rs. 1-5 per cwt. which works out to roughly 0-15-4.5 per maund of sugar. A sugar Excise Bill has also been introduced in the Assembly. The imposition of such a heavy excise duty within less than two years of the grant of protection to the industry is very unfortunate. It is also ill-timed in as much as the sugar industry has just developed to the point of enabling the country to become practically self-sufficient in the matter of sugar. This is a great achievement, considering that the industry is only two years old. And an excise duty is but a poor requital. But what is important is that the excise duty represents a reduction in the protection, not only from the previous level, but from the level intended by the Tariff Board because the sugar mills are not able to realise any value from the sale of their molasses. The Tariff Board expected that the factories would be able to reduce their cost of production per maund of sugar by As. 10/8 due to the realization from molasses during the initial period of protection. As explained in a previous chapter, a position has been reached when sugar factories far from realising any value from molasses have to incur expenditure to dispose of the molasses. In addition to that, there are the high freight charges for despatching sugar to distant markets. And it must be remembered that prices at the ports cannot be kept at a high level, in view of the competition of imported sugar at the ports and the adjacent areas.

The Government are also aware that due to the absence of any organization in the industry, and the very keen internal competition, Indian sugar mills have not been able to derive the full benifit of the protective duty also, as can be seen from the fact that they sell their sugar at about Rs. 1/8 to 1/12 per maund lower than the price of imported sugar at the ports, even when the difference in quality does not warrant a reduction of more than 6 annas per maund. If out of considerations of revenue an excise duty has to be levied, then the conditions of the industry require the imposition of a corresponding increase in the import duty in order to make it difficult for foreign sugar to compete with Indian sugar, particularly when India is in a position to supply all the sugar she needs..

The Government contend that the present duty of Rs. 9/1 per cwt., is Rs. 1/13 above the basic duty of Rs. 7/4 recommended by the Tariff Board

and that even if an excise duty of Rs. 1/5 per cwt. is levied, it still leaves 8 annas more per cwt. The Government have, however, decided to increase the measure of protection by 8 annas in accordance with the recommendation of the Tariff Board which stated that protection should be increased if Java sugar was being imported at a price less than Rs. 4 per md. at Calcutta. In point of fact in March, 1934 the landed price of Java sugar was Rs. 3/2 per md. without duty ; and in view of the large stocks that Java holds, and the deterioration in the quality of her sugar produced more than 2 years ago, it is not unlikely that Java may cut her prices further in order to unload her stocks, because the sugar is now sold not on the usual standard, but on sample. There is the further possibility of a fall in the prices of Java sugar if she goes off the Gold Standard. It would, therefore, be advisable if the Government increase the import duty on sugar, which, while it will bring no benefit to the sugar industry of the country by effecting an increase in the price of Indian sugar, owing to keen internal competition, will certainly enable it to capture distant markets, *e.g.* Madras, Trichinopoly, Rangoon, etc.

DECLINE IN PROFITS

It is also not clear to us how the Government have thought fit to impose such a heavy excise duty immediately after guaranteeing protection to the industry for a period of 15 years. It is difficult to acquiesce in the statement made by Sir George Schuster, the Finance Member, that the excise duty is necessary to prevent further expansion. The profits of the industry have already fallen, and there is hardly any danger of "continuing the stimulus", as can be seen from the following table, which will illustrate the position of the Industry in the light of the Tariff Board's recommendations.

	At commencement of Protective Period	At end of Protective Period	Actual as at February 1934
	Rs. A. P.	Rs. A. P.	Rs. A. P.
Fair Price of Sugar	9 5 9	7 12 5	7 12 0
Of which, cost of cane ...	5 8 10	4 0 0	4 0 0
	3 12 11	3 12 5	3 12 0
Add back value of Molasses ...	0 10 8	0 6 9	nil.
Balance to represent manufacturing cost, Overhead Charges and 10 % Profit on Capital invested	4 7 7	4 3 2	3 12 0

The figures shown in the last column represent the average market value ex-factory of Indian Factory Sugar in February, 1934 and the average cost of cane per md. sugar at As. 6 delivered, with extraction at 9%. Notwithstanding the apparently high protective duty the return to the factory is less by As. 7-2 than that envisaged by the Tariff Board at the *end* of the protective period without taking into account the proposed excise duty of As. 15-4.5 per md.

The extra protection provided by the surcharge has also become largely ineffective owing to the rapid expansion of the industry in the last two years. In the table below we give balance sheets of a few sugar companies in order to enable the reader to find out the extent of the profit made by the industry.

Name		Paid-up Capital Ordinary	Gross Block Account	Dividends per cent. for Year	
		Rs.	Rs.	1932	1933
Basti Sugar	...	11,96,759	27,71,028	30	25
Carew (Sugar)	...	16,00,000	14,27,258	12½	15
Cawnpore Sugar	...	15,00,000	68,43,810	35	30

Purtabpore Sugar ...	9,00,000	28,20,889	10	10

These balance sheets are of companies established before the grant of protection to the industry in 1932 An examination of the balance sheets of the newer companies will reveal the fact that their profits are by far smaller. The excise duty will affect adversely particularly the new factories, over 70 factories having commenced operations only this year, and some being even under construction.

We are aware that as a result of the policy of protection to the sugar industry the Government's revenue from the import duty on sugar has dried up almost completely and therefore the Government have thought of this source of revenue, but we do feel that this imposition of the excise duty is, to say the least, premature and will surely affect adversely the interests of the manufacturers, particularly the new factories, and also the agriculturists. The Provincial Councils in the United Provinces and the Punjab, and the various Chambers of Commerce also have looked with great disfavour upon this imposition of the excise duty by the Government of India at this juncture, as they are apprehensive that it will operate harshly on the industry as well as agriculture.

BENEFIT TO CONSUMERS

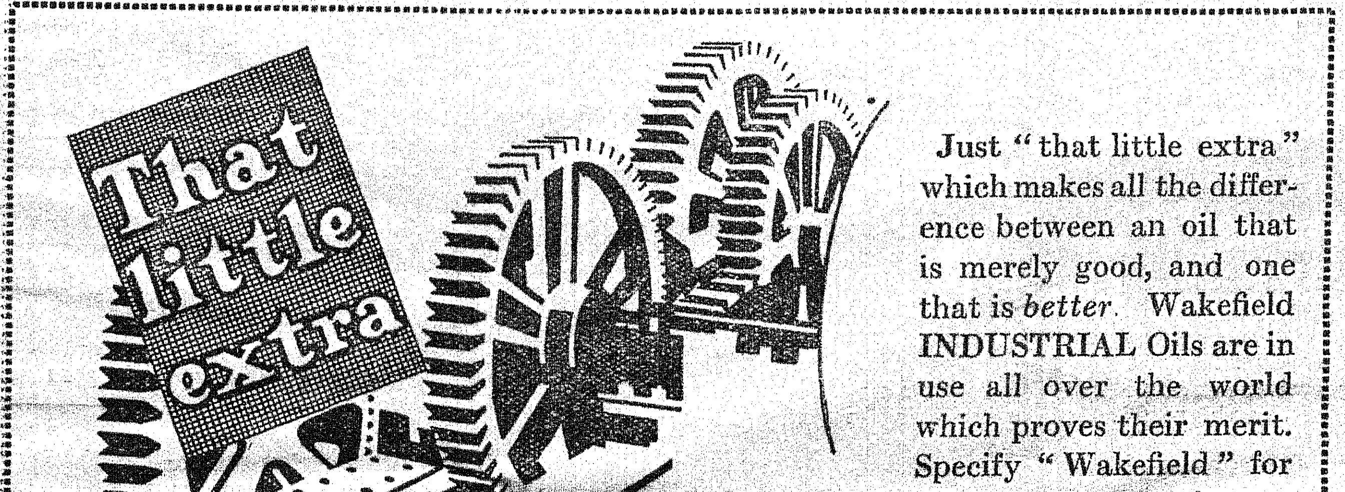
It is hardly necessary to reiterate that the Indian factories will not be able to pass on the duty, by increasing the price of sugar, to the consumer, in view of the internal competition. The following table will illustrate the price the Indian consumer would have to pay (*a*) for Java sugar, (*b*) for Indian sugar at the average value recommended by the Tariff Board (Rs. 8-13-1) and (*c*) the price actually paid at present market rates ; (in each case Re. 1 per maund has been added to factory or Port price for freight to consuming centres). The consumption is calculated at 6,00,000 tons.

Java Sugar @ 10/2/- per md. plus freight. 6,00,000 tons	Tariff Board recommendation @ 8/13/1 plus freight. 6,00,000 tons	Actual price in February 1934 @ 7/12/- plus freight. 6,00,000 tons.
Rs.	Rs.	Rs.
18,02,25,000	15,90,46,870	14,17,50,000

It is clear that this industry is today supplying India with sugar at a saving of Rs. 3,84,75,000 below the present Java price and of Rs. 1,72,96,870 below the average price recommended by the Tariff Board.

GOVERNMENT DUTY TO HELP GROWTH OF INDUSTRY

In the end we would urge the Government to consider the possibility of postponing for some time the levy of the excise duty on Indian sugar till the next year and also of reducing it to some extent. We would further suggest that the Government should earmark at least 25 per cent. of the proceeds of the excise duty for carrying on research work in improving the quality of sugar-cane, the utilisation of by-products of the industry, etc., and should spend the amount in such a way as to enable the industry to reduce its cost of production appreciably within a measurable period of time, and to do away with the necessity of protection. We hope that in appreciation of the fact that the Indian sugar industry gives employment to about 1,00,000 factory workers, and represents investment on the part of the public of no less than 20 crores of rupees since the date of the grant of protection, and the fact that the interests of not less than 15 million cultivators are closely bound up with the development and prosperity of the industry the Government will take a sympathetic interest in its continued progress, and enable it to reach at an early date a stage when it may rank among the most efficient and premier cane-sugar manufacturing industries of the world, able to meet the requirements not only of this country, but also of the British Empire.



Just "that little extra" which makes all the difference between an oil that is merely good, and one that is *better*. Wakefield INDUSTRIAL Oils are in use all over the world which proves their merit. Specify "Wakefield" for the lubrication of your Sugar Mill and economise.

REPRESENTATION ON BEHALF OF THE INDIAN SUGAR MILLS ASSOCIATION AND THE INDIAN SUGAR PRODUCERS ASSOCIATION.

---

1. INTRODUCTORY:

This Representation is put forward on behalf of the combined associations of sugar manufacturers representing 72 white sugar factories in British India.

(1) It is put forward, first, by reason of the announced intention of Government to impose an excise duty on factory produced sugars of Rs. 1-5-0 per Cwt. as from 1st April 1934. Secondly, by reason of Government's implied intention to exclude from this imposition the very large Khandsari industry, Thirdly, by reason of Government's announced intention shortly to introduce a Bill enabling Provincial Governments to fix minimum prices at which factories may purchase sugar cane from growers and, Fourthly, by reason of Press Reports, the accuracy of which it has not yet become possible to verify, of Government's intention to include in the Enabling Bill above referred to, power to Provincial Governments to set up and license, societies or marketing boards, to regulate the price and distribution of sugar cane to factories.

(2) It appears to be the impression of Government and, to some extent, of the Public, that the Indian White Sugar Industry, by reason of the high Protective Tariff and the imposition of the 25% surcharge, is enjoying a higher return, or ratio of profits, than was envisaged by the Tariff Board, as a result of whose deliberations and report, the Sugar Industry (Protection) Act of 1932 was passed by the Assembly.

It is the purpose of this Representation to show that, in fact, the return at present enjoyed by the Indian White Sugar Industry falls far below the degree envisaged by the Tariff Board and that in the event of Producers being compelled to bear the full amount of the proposed Excise Duty, the Industry will find itself in a most difficult situation.

2. THE PROPOSED EXCISE DUTY ON FACTORY SUGAR:

(1) After full investigation by the Indian Tariff Board, Government accepted their recommendations and in April 1932, the Indian Sugar (Protection) Act 1932, was passed by the Assembly, by which the Industry was granted Protection amounting to Rs. 7-4-0 per Cwt. in order "to provide for the fostering and development of the Sugar Industry for a period ending 31st March, 1946", the intention being to render the country self-supporting in her sugar requirements in due course.

(2) A 25% revenue surcharge, imposed for a period of eighteen months, subsequently extended and still in force, raised the effective Protection to Rs. 9-1-0 per Cwt.

(3) This high incidence of Protection has resulted in a development so rapid that the country is now considered to be almost self-supporting and in fact has practically reached the stage visualized by the Tariff Board at the end of the protective period.

(4) This rapid development has led to the investment by the Public of some 15 crores of rupees and has taken place by reason of the assurance of protection to the Industry for a period of fifteen years. This assurance not only protected the investing public from competition from foreign sources but also implied equality of treatment for all classes of Sugar producers in India.

(5) The following table will illustrate the present position of the Industry in the light of the Tariff Board recommendation:—

	Tariff Board Report Page 69 (Para 64)		
	At commencement of Protective Period.	At end of Protective Period.	Actual as at February 1934.
	Rs.	Rs.	Rs.
Fair Price of Sugar	9 5 9	7 12 5	7 12 0
Of which, cost of cane ...	5 8 10	4 0 0	4 0 0
	3 12 11	3 12 5	3 12 0
Add back value of Molasses ...	0 10 8	0 6 9	Nil
Balance to represent manufacturing cost, Overhead Charges and 10% Profit on Capital invested ...	4 7 7	4 3 2	3 12 0

THE BUELL PULVERISED COAL FIRING SYSTEM

British in design—British in manufacture—to use Indian coals at their maximum efficiency

The features of the Buell Pulverised Fuel System which experience has brought out in power generating plants are:—

1. RELIABILITY IN SERVICE

Resulting from the design, materials and workmanship employed, enabling plants to operate over long periods without involuntary stoppage.

2. FLEXIBILITY IN OPERATION

Resulting from the complete control of heat liberation in the furnace, following the ease of adjustment of coal and air supply.

3. MAXIMUM OPERATING EFFICIENCY

Resulting from the close control of air supply and its intimate mixing with the powdered coal—maintained consistently at a commercial degree of fineness.

4. ECONOMY

Resulting from the adaptability of the system to cheaper grades of coal, minimum heat losses from carbon in the ash and excess air.

THE BUELL COMBUSTION CO., LTD.
12, MISSION ROW - - - - - - CALCUTTA
MARTIN & CO., AGENTS

The figures shown in the last column represent the average market value ex-factory of Indian Factory Sugar in February 1934, and the average cost of cane per md. sugar @ -/6/- delivered, with extraction @ 9%.

(6) The above table illustrates that notwithstanding the apparently high protective duty, the return to the factory to cover cost of production, overhead charges and profit is less by Rs. 0-7-2 than that visualized by the Tariff Board at the end of the Protective Period, without taking into account the proposed Excise Duty of Rs. 0-15-4.5 per manud. That is to say that whereas the Tariff Board considered that at the end of the period of protection, factories should, after paying for their cane have Rs. 4-3-2 per maund sugar to cover manufacturing cost (Rs. 2-7-6) Overhead Charges (Rs. 0-10-0) and Profit (Rs. 1-1-8), they now only have Rs. 3-12-0 and, if they have to bear the whole of the Excise Duty of Rs. 0-15-4.5 this may be reduced to Rs. 2-12-7.5 or barely sufficient to cover Manufacturing Costs, with no margin for Overhead Charges or Profit.

(7) Specifically, the Industry's objections to the Excise Duty as at present proposed may be tabulated as follows:—

(*a.*) The Finance Member's statement that the Excise Duty is necessary to prevent further expansion, is not correct. The above table will clearly show that under existing conditions and without the imposition of any Excise Duty, the industry cannot recover the 10% profit on its investment indicated by the Tariff Board. There is therefore, no likelihood of "the danger of continuing a stimulus which is in excess of what Government decided to be necessary as a measure of protection."

(*b*) That the imposition of this duty, which Factories will have to bear in whole or part is manifestly unjust particularly to that large body of investors whose factories have only recently, if yet, actually commenced operations. A large proportion of the Industry is now working its second season and an even larger proportion is working this season for the first time.

(*c*) That the extra protection provided by the surcharge has become largely ineffective owing to the rapid expansion of the Industry in the past two years and that in using this surcharge as a reason for imposing the proposed Excise Duty, Government are basing their arguments on a fallacy.

(*d*) That if, as is implied, the Khandsari Industry is to be excluded from this Duty, a further hardship is imposed on the Sugar Factories.

(*e*) That the provision appertaining to Factories in Native States is most unsatisfactory, and may encourage States to utilize the Duty recovered by them in further extensions of State-aided sugar factories to the disadvantage of the Industry in British India. At the least, therefore, provision should be made for the repayment to Central Government of the Duty realized on all Indian States' factory outturn in excess of the Indian States' consumption.

(*f*) The Khandsari Industry is estimated to represent one-third of the total sugar output. The exclusion of this portion of the industry can only react as a further depressing influence on the market price of sugar in India. This discrimination to the disadvantage of one section of the industry is a breach of the equality of treatment implied for all classes of the

industry, when the protection was granted under the stimulus of which the Factory Industry has expanded. It must be pointed out that the Khandsari manufacturer is not an agriculturist, but an industrialist, whose raw material is purchased—juice instead of purchased—cane.

8. It is fully realized that the loss of Import Duty Revenue on foreign sugar to Government is a matter of great improtance and, although this loss was envisaged by Government when the Protection Act was passed, Government may now find themselves unable to find alternative methods of taxation or to revise or reduce the Excise Duty now proposed.

9. If this is the case, and notwithstanding the injustice to the Industry, this Duty must be imposed, then it is most strongly recommended:—

(*a*) That the Khandsari Industry should be included and the incidence of duty reduced proportionately.

(*b*) That in order to enable Indian Sugars to reach the furthest markets in India and Burma the specific protective duty of Rs. 7-4-0 per Cwt. should be increased to Rs. 7-12-0 per Cwt. simultaneously with the imposition of the Excise and during the continuance of the surcharge.

(*c*) That the duty should not be imposed before 1st November, 1934 or if this is impracticable—

(*d*) That the Duty should apply only to Sugars actually produced on or after 1st April 1934, and be payable when issued from factories.

10. Withregard to points (c) and (d) above it should be pointed out that the imposition of this duty within a few weeks of the end of a season will cause and is causing considerable market dislocation, whilst the provision that the duties will be payable on all factory stocks on 1st April will impose an unfair hardship on those factories, which, owing to inadequate railway services, will be unable to clear their stocks by this date.

3. Proposed Bill to Enable Local Governments to fix Sugar Cane Prices.

1. The fixation of minimum prices of a raw material for a large food producing industry, involves a departure from a principle so unprecedented, that it should be the subject of representation from bodies of far greater weight than the Sugar Industry. Upon this important question of constitutional principle it is not, therefore, proposed herein to enlarge beyond the registration of this emphatic protest.

2. The payment of a fair price for sugar cane to the grower is a principle which the Industry wholeheartedly accepts. Whilst, in a few isolated cases, advantage of excessive cane crops may have been taken by Factories to reduce the price paid to growers, these cases are not only exceptional, but the consequential and inevitable reduction in planting for the following season soon abolishes this tendency.

3. The Tariff Board laid down, after most thorough investigation, that, "it is clear that no direct measures can be taken to ensure that a definite rate for cane is paid to producers" (P. 99 Para 101) "we fear that no system of scaling prices for cane in accordance with the output of sugar will be understood by the ordinary agriculturist——further that, even if a scale could be devised which would be suitable for the varied conditions of cane cultivation in different parts of India, the methods of evasion are so numerous, that it is impossible that it could be successfully imposed." (P. 100).

They add that "the main requirements for the success of a sugar factory are an adequate and continuous supply of cane of reasonable freshness, a sufficiently long working season and an economic price for cane" (P. 103). This economic price the Tariff Board considered, for Northern India to be 0-8-0 per maund delivered, at the commencement of the period of Protection (i.e., with sugar selling at Rs. 9-5-9) and 0-6-0 per maund at the end of the period of Protection (i.e., with sugar selling at Rs. 7-12-5).

4. It must be pointed out that, as illustrated above, with conditions considerably less favourable to the Industry than the Tariff Board visualized at the end of the period of protection, the average price being paid for sugar cane is not less than 0-6-0 per maund delivered at Factory.

5. Any legislation designed to enhance the price now being paid will not only inflict a further hardship upon this Industry, but will certainly increase the price of sugar cane above that "economic price" visualized by the Tariff Board.

6. It must be pointed out that Provincial Governments' sole interest in the Sugar Industry lies in the prosperity of the agriculturist through the realization of Land Revenue, Irrigation dues &c. &c. This Industry has neither wish nor intention to take advantage of the grower, but the proposed legislation places it in the hands of the Provincial Governments to take advantage of the Sugar Factories, almost up to the point of final extinction. If Provincial Governments had interest in the proposed Excise Duty, Income and Super Tax, Import Duty on Sugar Machinery or Import Duty on Foreign Sugars, etc., there might be less justification for the apprehension felt at this proposed legislation.

4. Reported intention of Government to create Licensed Societies or Marketing Boards for Sugar Cane:

1. Until the Bill is published it may be considered premature to comment on this proposal. As re-

HARTON'S ROPES
Can take the load
MANILA COTTON COIR WIRE
W. H. HARTON & CO., LTD.
(ESTABLISHED 1780.)
5, CLIVE GHAT STREET, CALCUTTA.
TELEPHONE: CAL. 311. TELEGRAMS: "HARTONCO."

ported, however, the proposal is so revolutionary, and is considered by the Industry, so certain to result in complete disaster for the sugar factories, that it is considered essential to review this subject with the least possible delay.

2. The absolutely vital importance of the constant supply of fresh cut cane to a sugar factory cannot be sufficiently stressed.

3. The imposition, between the factory organization and the agriculturists from whom the cane is purchased, of any kind of organization, whether controlled by Government or not, with power to fix prices, distribute the cane, receive and distribute payment, cannot possibly do otherwise than duplicate opportunities for corruption and delay. In actual fact the freshness of the sugar cane is of greater importance than the price. Stale cane, even four days after cutting, is not worth purchasing at any price at all. The inestimable losses which would be incurred by delays in supply would in no way benefit the agriculturist, but would make working impossible for the Sugar Factories.

4. The Industry, holding these views, and with the knowledge of experience that these views are correct, can only oppose any such legislation with all the means at its disposal.

5. THE CONSUMER:

(1) It may be pointed out that this Industry is now responsible for the direct employment of between 80,000 and 90,000 factory workers, from 1000 to 1500 graduate executives, a very considerable employment among bullock carters, and revenue to railway and other transport services. It purchases and consumes 60 Lakhs of tons of sugar-cane each season, having a value of some 6 Crores of rupees, and has stopped an annual drain of some 12 Crores of rupees abroad for foreign sugar.

(2) So far as the consumer is concerned, the following table will illustrate the price the Indian consumer would have to pay (*a*) for Java Sugar (*b*) for Indian Sugar at the average value recommended by the Tariff Board (Rs. 8-13-1) and (*c*) actually paid at present market rates ; (In each case Re. 1 per maund has been added to factory or Port price for freight to consuming centres). The consumption is cauclated at 6,00,000 tons.

Java Sugar @ 10/2 per maund plus freight. 6,00.000 Tons.	Tariff Board Recommendation @ 8-13-1 plus freight 6,00,000 Tons	Actual price in February 1934 @ 7-12 plus freight 6,00,000 Tons
Rs.	Rs.	Rs.
18,02,25,000	15,90,46,870	14,17,50,000

So that it would appear that this Industry is today supplying India with sugar at a saving of Rs. 3,84,75,000 below the present Java price and of Rs. 1,72,96,870 below the average price recommended by the Tariff Board.

(3) Finally, this Representation would suggest that so drastic is the proposed legislation, and so far reaching will be its effects on the Industry, the agriculturist and the consumer, that if great injustice and great hardship is to be avoided, Government should postpone their legislation at least until the September Session to enable the representation herein put forward to be fully investigated and the results ventilated before proceeding further.

A BILL TO PROVIDE FOR THE IMPOSITION AND COLLECTION OF AN EXCISE DUTY ON SUGAR

Whereas it is expedient to impose an excise duty on sugar produced in factories and to provide for the collection thereof; It is hereby enacted as follows:—

SHORT TITLE AND EXTENT.

1. (1) This Act may be called the Sugar (Excise Duty) Act, 1934.

(2) It extends to the whole of British India, including British Baluchistan and the Sonthal Parganas.

DEFINITIONS.

2. In this Act, unless there is anything repugnant in the subject or context,—

(a) "factory" means any premises wherein, or within the precincts of which, twenty or more workers are working or were working on any day of the preceding twelve months, and in any part of which any manufacturing process connected with the production of sugar is being carried on or is ordinarily carried on with the aid of powers;

(b) "owner" includes any person expressly or impliedly authorized by the owner of a factory to be his agent in respect of such factory; and

(c) "sugar" means any form of sugar containing more than ninety per cent. of sucrose.

IMPOSITION OF DUTY ON SUGAR.

3. A duty of excise at the rate of one rupee and five annas per cwt. shall be levied on all sugar produced in any factory in British India and either issued out of such factory on or after the 1st day of April, 1934, or used within such factory on or after the said date in the manufacture of any commodity other than sugar, and shall be payable by the owner of the factory.

RECOVERY OF DUTY WITH PENALTY.

4. (1) If any duty payable under section 3 is not paid within the time fixed by rules made in that behalf under this Act, it shall be deemed to be an arrear, and the authority to which such duty is payable may, in lieu thereof, recover any sum not exceeding four times the amount of duty unpaid which such authority may in its discretion think it reasonable to require.

(2) An arrear of duty, or any sum recoverable in lieu thereof under this section, shall be recoverable as an arrear of land revenue and shall be recoverable in addition to, and not in substitution for, any other penalty incurred under this Act.

ISSUE OF SUGAR FROM FACTORY.

5. No person shall issue any sugar out of the premises of a factory, except in accordance with the provisions of rules made in that behalf under this Act, or, until such rules are made, in accordance with the general or special orders of the Local Government.

POWER OF GOVERNOR-GENERAL-IN-COUNCIL TO IMPOSE CUSTOMS DUTY ON SUGAR.

6. (1) The Governor-General-in-Council may, by notification in the *Gazette of India*, impose on sugar brought into British India from the territory of any State in India, not being territory which has been

Post Box 654, BOMBAY

declared under section 5 of the Indian Tariff Act, 1894, to be foreign territory for the purposes of that section, a duty of customs equivalent to the excise duty imposed by this Act on sugar produced in British India.

(2) The Governor-General-in-Council may, by notification in the *Gazette of India,* declare that the provisions of the Land Customs Act, 1924, shall apply to the levy of the duty of customs imposed under this section, and on such declaration that Act shall apply as if the expression "foreign territory" in that Act included territory forming part of a State in India.

PENALTY FOR ISSUE OF SUGAR FROM FACTORY IN CONTRAVENTION OF SECTION 5.

7. Whoever contravenes the provisions of section 5 shall be punishable with imprisonment which may extend to six months, or with fine which may extend to one thousand rupees, or with both.

PENALTY FOR EVASION OF DUTY OR FAILURE TO SUPPLY INFORMATION.

8. Whoever evades or attempts to evade the payment of any duty payable by him under this Act, or fails to supply any information which he is required by any rule made under this Act to supply, or knowingly supplies false information, shall be punishable with imprisonment which may extend to six months, or with fine which may extend to one thousand rupees, or with both.

POWER OF COURTS TO ORDER FORFEITURE OF SUGAR.

9. Any Court trying an offence under this Act may order that any sugar, together with the packages or coverings thereof, in respect of which the Court is satisfied that an offence under this Act has been committed, shall be forfeited to His Majesty.

APPLICATION OF THE PROVISIONS OF ACT VIII OF 1878 TO THE DUTY ON SUGAR.

10. The Governor-General-in-Council may, by notification in the *Gazette of India,* declare that any of the provisions of the Sea Customs Act, 1878, relating to the levy of and exemption from customs duties, drawback of duty, warehousing, offences and penalties, confiscation, and procedure relating to offences and appeals shall, with such modifications and alterations as he may consider necessary or desirable to adapt them to the circumstances, be applicable in regard to like matters in respect of the duty on sugar imposed by section 3.

POWER OF GOVERNOR-GENERAL-IN-COUNCIL TO MAKE RULES.

11. (1) The Governor-General-in-Council may, by notification in the *Gazette of India,* make rules to carry into effect the purposes and objects of this Act.

(2) In particular, and with prejudice to the generality of the foregoing power, such rules may—

(a) Provide for the assessment and collection of the duty and the authorities by whom functions under this Act are to be discharged, the issue of notices requiring payment, the manner in which the duty shall be payable, and the recovery of arrears;

(b) regulate the issue of sugar out of any factory;

(c) impose on the owners of factories, and on persons engaged in the sale of sugar, the duty of furnishing information, keeping records and making returns, and prescribe the nature of such information and the form of such records and returns the particulars to be contained therein, and the manner in which they shall be verified;

(d) provide for the detention of sugar for the purpose of exacting the duty, the confiscation otherwise than under section 9 of sugar in respect of which breaches of the Act or rules have been committed, and the disposal of sugar so detained or confiscated;

(e) authorize and regulate the search of any place or conveyance used for the manufacture, storage or carriage of sugar; and

IMPERIAL CHEMICAL INDUSTRIES (India), LTD.
18, STRAND ROAD :: :: :: :: :: :: CALCUTTA
BOMBAY, MADRAS, LAHORE, RANGOON, COLOMBO, PATNA, CAWNPORE, AHMEDABAD, CALICUT, COCHIN, KARACHI, AMRITSAR AND VIZAGAPATAM

(f) authorize and regulate the composition of offences against or liabilities incurred under the Act and rules.

(3) In making any rule under this section the Governor General in Council may provide that a breach of the rule shall, where no other penalty is provided by this Act, be punishable with imprisonment for any term not exceeding six months, or with fine not exceeding one thousand rupees, or with both imprisonment and fine.

(4) The Governor-General in Council may delegate all or any of his powers under this section to a Local Government.

STATEMENT OF OBJECTS AND REASONS.

This Bill is designed to impose an excise duty on sugar produced in factories in British India. The rate of tax is fixed so as to be equal to the excess of the emergency surcharge over the figure by which, according to the Government's calculations, it would have been incumbent upon them to raise the protective duty in exercise of their power under section 4 of the Sugar Industry (Protection) Act, 1932, had the emergency surcharge not been in force.

2. The Administration of the duty will be entrusted to the Local Governments, working as agents for the Government of India; but the Bill has been so drafted as to render it possible to revise this arrangement at a later stage.

3. Following the precedent of the Cotton Duties Act, Indian States in which sugar is produced will be invited to impose, for their own benefit, a corresponding excise duty, so as to maintain fair competition. Power is taken to recover duty on sugar imported from States that do not agree to this proposal, but it is hoped that no State in which sugar is produced will adopt that attitude.

GEORGE SCHUSTER.

New Delhi,
The 27th February, 1934.

(To be introduced in the Legislative Assembly.)

A BILL TO PROVIDE FOR THE IMPOSITION AND COLLECTION OF AN EXCISE DUTY ON MATCHES.

Whereas it is expedient to impose an excise duty on matches, to provide for the collection thereof, and to alter the duty of customs leviable on matches under the Indian Tariff Act, 1894; It is hereby enacted as follows:—

SHORT TITLE AND EXTENT.

1. (1) This Act may be called the Matches (Excise Duty) Act, 1934.

(2) It extends to the whole of British India, including British Baluchistan and the Sonthal Parganas.

DEFINITIONS.

2. In this Act, unless there is anything repugnant in the subject or context,—

(a) "manufactory" means any premises wherein matches are manufactured, and

(b) "owner" includes any person expressly or impliedly authorized by an owner of a manufactory to be his agent in respect of the manufactory.

IMPOSITION OF DUTY ON MATCHES.

3. A duty of excise at the rates specified in section 4 shall be levied on all matches manufactured in any manufactory in British India and issued out of such manufactory on or after the 1st day of April, 1934, and shall be payable by the owner of the manufactory.

RATES OF DUTY.

4. The duty payable under section 3 shall be levied at the following rates, namely:—

(a) in the case of matches in boxes containing on an average not more than eighty in a box, at the rate of two rupees and four annas per gross of boxes;

(b) in the case of matches in boxes containing on an average more than eighty in a box, at a rate per gross of boxes calculated at nine annas for every twenty matches or fraction thereof in the box; and

(c) in the case of matches not in boxes, including matches in booklets, at such rate, corresponding as nearly as may be to that specified in clause (*a*), as the Governor General in Council may prescribe.

RECOVERY OF DUTY WITH PENALTY.

5. (1) If any duty payable under section 3 is not paid within the time fixed by rules made in that behalf under this Act, it shall be deemed to be an arrear, and the authority to which such duty is payable may, in lieu thereof, recover any sum not exceeding four times the amount of duty unpaid which such authority may in its discretion think it reasonable to require.

(2) An arrear of duty, or any sum recoverable in lieu thereof under this section, shall be recoverable as an arrear of land revenue and shall be recoverable in addition to, and not in substitution for ,any other penalty incurred under this Act.

ISSUE OF MATCHES FROM MANUFACTORY.

6. No person shall issue any matches out of a manufactory, except in accordance with the provisions of rules made in that behalf under this Act, or, until such rules are made, in accordance with the general or special orders of the Local Government.

Power of Governor General in Council to prohibit import of matches.

7. The Governor General in Council may, by notification in the Gazette of India, prohibit absolutely, or with such exceptions as he thinks fit, the bringing of matches into British India from the territory of any specific Prince or Chief in India.

Power of Governor General in Council to direct use of banderoles.

8. The Governor General in Council may, by notification in the Gazette of India, direct that after a date to be specified in the notification every packet, box or booklet of matches issued from a manufactory or kept or offered for sale in British India shall bear a banderof or stamp of such nature and affixed in such manner as may be prescribed by rules made under this Act.

Prohibition of manufacture of matches without licence.

9. From such date as may be fixed by the Governor General in Council by notification in the Gazette of India in this behalf, no person shall manufacture matches in British India except under and in accordance with a licence to manufacture issued under this Act.

Penalty for issue of matches from manufactory in contravention of section 6.

10. Whoever contravenes the provisions of section 6 shall be punishable with imprisonment which may extend to six months, or with fine which may extent to one thousand rupees, or with both.

Penalty for import of matches in contravention of Act.

11. (1) Whoever, in contravention of any notification made under section 7, imports, or attempts to import, matches into British India shall be punishable with imprisonment which may extend to six months, or with fine which may extend to four times the amount of the duty which would be payable on the matches if they were liable to duty in British India or to one thousand rupees, whichever is greater, or with both imprisonment and fine.

(2) Whoever abets an offence punishable under sub-section (1) shall, whether such offence is or is not committed in consequence of such abetment, and notwithstanding anything contained in section 116 of the Indian Penal Code, be punished with the punishment provided for the offence.

Penalty for issue or sale of matches without banderol.

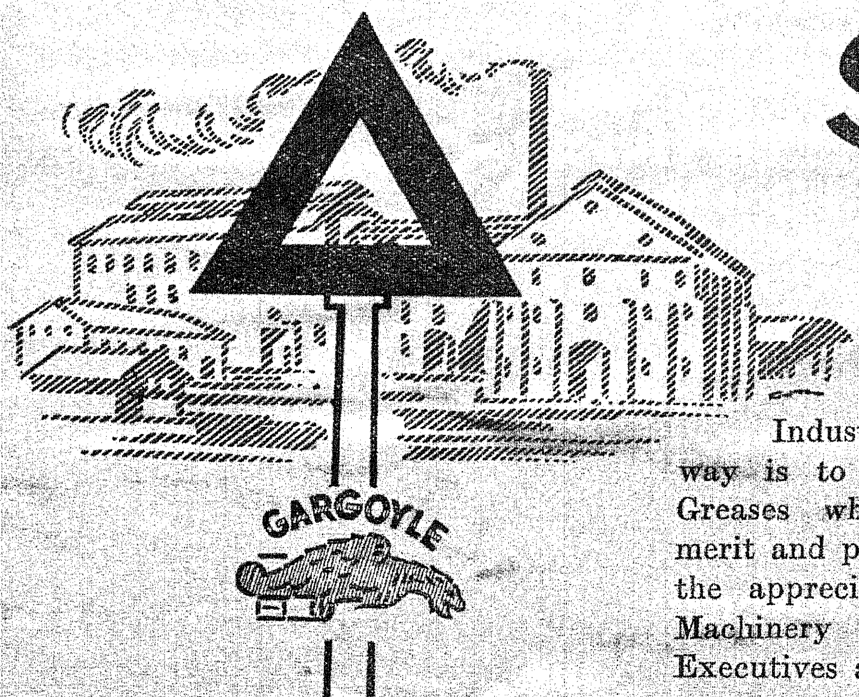
12. Whoever, in contravention of a direction made under section 8, issues from any manufactory, or keeps or offers for sale, any packet, box or booklet of matches which does not bear a banderol or stamp in accordance with the rules made under this Act shall be punishable with fine which may extend to one thousand rupees or to one rupee for every such packet, box or booklet of matches in respect of which the offence has been committed, whichever is greater.

Penalty for manufacture of matches without licence.

13. Whoever, without a licence to manufacture, or in contravention of the terms of such licence, manufactures matches shall be punishable with imprisonment which may extend to six months, or with fine which may extend to one thousand rupees, or with both.

Penalty for evasion of duty or failure to supply information.

14. Whoever evades, or attempts to evade, the payment of any duty payable by him under this Act, or fails to supply any information which he is required under this Act or the rules to supply, or knowingly supplies false information, shall be punishable with imprisonment which may extend to six months, or with fine which may extend to one thousand rupees, or with both.



Safety first

In selecting Lubricants for Sugar Mills, as in any other Industry, the safe and economical way is to rely upon those Oils and Greases which, by their outstanding merit and proved performance, have won the appreciation and commendation of Machinery Manufacturers and Plant Executives alike.

POWER OF COURTS TO ORDER FORFEITURE OF MATCHES

15. Any Court trying an offence under this Act may order that any matches, together with the boxes, packing or wrappings thereof, in respect of which the Court is satisfied that an offence under this Act has been committed, shall be forfeited to His Majesty.

APPLICATION OF ACT VIII OF 1878 TO THE IMPORTATION OF MATCHES

16. The law for the time being in force relating to Sea Customs and to goods the importation of which is prohibited by section 18 of the Sea Customs Act, 1878, shall apply in respect of matches the importation of which is prohibited by notification made under section 7 of this Act, and the officers of Customs and the officers empowered under the Sea Customs Act, 1878, to perform the duties imposed by that Act on a Customs-Collector and other officers of Customs shall have the same powers in respect of such matches as they have for the time being in respect of goods the importation of which is prohibited by section 18 of the Sea Customs Act, 1878:

Provided that the penalty for the offence specified in section 167, No. 8, of the Sea Customs Act, 1878, shall, where the offence is committed in relation to matches the importation of which is prohibited under section 7 of this Act, be a penalty of confiscation only, and such penalty of confiscation shall not be inflicted under section 167, No. 8, of the Sea Customs Act, 1878, in any case where the person concerned in the offence is sent for trial under section 11 of this Act.

APPLICATION OF THE PROVISIONS ACT VIII OF 1878 TO THE DUTY ON MATCHES.

17. The Governor General in Council may, by notification in the Gazette of India, declare that any of the provisions of the Sea Customs Act, 1878, relating to the levy of and exemption from customs duties, drawback of duty, warehousing, offences and penalties, confiscation, and procedure relating to offences and appeals shall, with such modifications and alterations as he may consider necessary or desirable to adapt them to the circumstances, be applicable in regard to like matters in respect of the duty on matches imposed by section 3.

POWER OF GOVERNOR GENERAL IN COUNCIL TO MAKE RULES.

18. (1) The Governor General in Council may, by notification in the Gazette of India, make rules to carry into effect the purposes and objects of this Act.

(2) In particular, and without prejudice to the generality of the foregoing power, such rules may—

(*a*) prescribe the rate of the duty to be paid on matches not in boxes under clause (*c*) of section 4;

(*b*) provide for the assessment and collection of the duty and the authorities by whom functions under this Act are to be discharged, the issue of notices requiring payment, the manner in which the duty shall be payable, and the recovery of arrears ;

(*c*) provide for the distinguishing of matches which have been manufactured under licence, or on which duty has been paid, or which are exempt from duty under this Act ;

(*d*) regulate the issue of matches out of any manufactory ;

(*e*) impose on the owners of manufactories and on persons engaged in the sale of matches the duty of furnishing information, keeping records and making returns, and prescribe the nature of such information and the form of such records and returns, the particulars to be contained therein, and the manner in which they shall be verified ;

(*f*) provide for the issuing of licenses, the form and the conditions of licenses, and the fees to be charged therefor ;

(*g*) provide for the detention of matches for the purpose of exacting the duty, the confiscation, otherwise than under section 15, of matches in respect of which breaches of the Act or rules have been committed, and the disposal of matches so detained or confiscated ;

(*h*) authorize and regulate the search of any place or conveyance used for the manufacture, storage or carriage of matches ;

(*i*) authorize and regulate the composition of offences against, or liabilities incurred under, the Act and rules including composite payments in lieu of duty ; and

(*j*) prescribe the nature of and the manner of affixing banderols or stamps.

(3) In making any rule under this section the Governor General in Council may provide that a breach of the rule shall, where no other penalty is provided by this Act, be punishable with imprisonment for any term not exceeding six months, or with fine not exceeding one thousand rupees, or with both imprisonment and fine.

(4) The Governor General in Council may delegate all or any of his powers under this section to a Local Government.

Amendment of the Second Achedule, Act VIII of 1894.

19. (1) In the Second Schedule to the Indian Tariff Act, 1894, for sub-head (*a*) of Item No. 159 and the entries in the third and fourth columns relating thereto the following sub-head and entries shall be substituted, namely:—

"(a) Matches—

(1) In boxes containing on an average not more than eighty in a box.	Per gross of boxes.	Three rupees and eight annas.
(2) In boxes containg on an average more than eighty in a box.	For every 20 matches or fraction thereof in each box, per gross of boxes.	Fourteen annas.
(3) Not in boxes, including matches in booklets.	For every 960 matches or fraction thereof.	Four annas and eight pies.

(2) Notwithstanding anything contained in section 4 of the Indian Finance (Supplementary and Extending) Act, 1931, the additional duty imposed by that section of that Act shall not be levied or collected on any article chargeable with duty under sub-head (*a*), Item No. 159 of the Second Schedule to the Indian Tariff Act, 1894, as amended by this section.

Repeal

20. The Burma (Excise) Duty on Matches Act, 1932, is hereby repealed with effect from the 31st day of March, 1934, but all the provisions of that Act and of the rules made thereunder shall, notwithstanding such repeal, continue to apply to any matches liable on the 31st day of March, 1934, to duty under section 3 of that Act, and to any proceedings commenced in relation to any such matches.

STATEMENT OF OBJECTS AND REASONS

The purpose of this Bill is to impose an excise duty on matches made in British India. The collection of the tax is, in the first instance, to be in the hands of the Local Governments working as agents of the Government of India ; but the Bill has been so drafted as to render it possible to make other arrangements at a later stage, if experience shows this to be desirable.

2. The great majority of the States in India have signified their willingness to enter into an agreement under which every State in which matches are made, or may in future be made, will recover a corresponding tax paying the proceeds into a common pool along with the proceeds of the British Indian tax ; and the amounts in this pool will be divided on an estimated consumption basis between British India and all the States that have entered into this agreement. The power of prohibition of imports entered in the Bill is to be used against matches produced in any State that declines to enter into this agreement.

3. The proposed excise duty cannot be imposed side by side with the existing Burma duty on matches, and the Burma Act imposing that duty is to be repealed.

4. The customs duties on matches are revised so as to comprise rates maintaining the existing measure of protection for the Indian industry over and above the equivalent of the new excise duty.

PART IV.

UNIVERSITY OF ALLAHABAD.

NOTIFICATION.

Dated Allahabad, the 23rd June, 1921.

No. 2003.—In accordance with provisions of section 20 of the Allahabad University Act, 1887 (XVIII of 1887), the following alterations to the existing University Regulations which have been made by the Senate of the Allahabad University and sanctioned by the Local Government, under section 25, sub-section (i) of the Indian Universities Act, 1904 (VIII of 1904), are hereby notified for general information :—

CHAPTER XX.

That the present regulations governing the D.Sc. Examination be replaced by the following :—

D.Sc.

1.—A candidate for the degree of D.Sc. must be either—

(a) a M.Sc. or M.A. of the Allahabad University of at least three years' standing, or

(b) a M.Sc. or M.A., of at least three years' standing of any other Indian university recognized by the Allahabad University who has been resident within the territorial limits of the Allahabad University for the three years immediately preceding his application.

2.—Every candidate who intends to supplicate for the degree of D.Sc. shall communicate to the Registrar *(a)* his intention to do so, *(b)* the special subject chosen by him for a thesis, *(c)* a certificate signed by two D.Sc's. of the University or by two members of the Faculty of Science testifying that the applicant is a fit candidate for the degree of D.Sc.

3.—If the application is approved by the Faculty of Science the Registrar shall inform the candidate of the fact. The candidate will then submit his thesis (three printed or typewritten copies) together with a fee of Rs. 200 (or such uniform fee as may be prescribed for the Doctor's degree in the Faculties).

4.—The candidate must indicate how far his thesis embodies the results of his own researches and in what respects his investigations appear to him to advance scientific knowledge; he is invited to submit in support of his candidature any paper which he may have published independently or conjointly.

5.—A candidate may not submit as his thesis any paper for which a degree has already been conferred on him by this or any other university, but he shall not be precluded from incorporating work, which he has already submitted for a degree, in a thesis covering a wider field, provided that he shall indicate the extent of the work so incorporated.

6.—The thesis submitted must be satisfactory, as regards literary presentation, and, if not already published, must be in a form suitable for publication.

7.—The fitness of the candidate for the degree shall be judged on the thesis. The examiners will satisfy themselves that the thesis embodies the results of the candidate's original researches and that these researches constitute a material addition to scientific knowledge.

8.—No fee shall be charged to the candidate in respect of the diploma of the degree.

9.—The thesis submitted for the degree of D.Sc. shall be on some branch of the following:—

1. Mathematics.
2. Physics.
3. Chemistry.
4. Zoology.
5. Botany.

PART IV.

ADDENDA AND CORRIGENDA TO THE PROSPECTUS OF TRAINING CLASSES FOR MISTRESSES FOR ENGLISH SCHOOLS, 1919.

In the outline of the written examination at page 1 under paragraph 8 *for* "English Unseen Passages" in column 2 against serial number 4 *read* "English*" and *delete* the figure "1" in column "Time in hours" and at the end of the statement *add* the following:—

"* The examination in English will be held at the same time as that in Practice of Teaching."

At page 6 *for* the heading "(11) *General reading and explanation of the text (English)*" and the matter below it *substitute*—

"(11) *English—General reading*—

The aim of the course is to develop the power to read with intelligence and appreciation. There will be an oral examination in which the students will be questioned on the books they have read and they will also be required to write a short composition, the object of which will be to test whether they have read the books with understanding and appreciation. The books should be selected from a list drawn up by the Chief Inspectress. Managers are invited to suggest additions to or amendments of this list. At least three books should be read, one from each of the following sub-divisions of the list:—

1. Essays.
2. Poetry.
3. Fiction.

NOTE.—Detailed questions on the text of the books will not be asked."

OFFICE OF THE INSPECTOR OF MUHAMMADAN SCHOOLS, UNITED PROVINCES.

With reference to the resolutions passed at the meeting of the Provincial Maktab Committee, held on the 11th July, 1920, the following orders of the Government are published for general information:—

(1) Orders have been issued by Government for the redistribution of savings from the allotments made to district boards in 1919-20, for Islamia schools and *maktabs*.

(2) The number of members of the District Board Muhammadan Education Committee should be fixed by the District Magistrate according to local requirements and the members of the committee should be appointed by a selecting body consisting of the Chairman of the district board, the Chairman of the committee, and the Muhammadan members of the board. Necessary action is being taken to revise rule 19 of the district board educational rules accordingly.

ALLAHABAD, SATURDAY, NOVEMBER 5, 1921.

PART IV.

OFFICE OF DIRECTOR OF PUBLIC INSTRUCTION, UNITED PROVINCES.

STATE SCHOLARSHIP FOR INDIAN WOMEN.

ONE scholarship of the value of £300 a year tenable in the United Kingdom or in foreign countries will be awarded ordinarily for the study of medicine but occasionally for other educational courses. The scholarship is open to Indian women domiciled in British India and born in British India of parents habitually resident in India and not established there for temporary purposes only.

NOTE.—A person who though born in a Native State or temporarily residing in a Native State is domiciled in British India, is eligible for the scholarship.

2. Application must be forwarded to the Director of Public Instruction, through the Inspector of European Schools, the Chief Inspectress of Girls' Schools, or the Principal of the affiliated college in which the applicant has last studied.

3. The applications for the scholarship to be awarded in 1922 must reach the Director of Public Instruction not later than the 1st February, 1922.

4. The following papers should accompany the application :—

(a) Certificate showing that the candidate has graduated in Arts or Science or possesses an Indian Degree in Medicine, together with an account of her school and college career and testimonials from her professors and teachers.

(b) A medical certificate of physical fitness to undergo abroad the course of study proposed.

(c) A statement that the candidate is willing to comply with any arrangements that may be made for her by the High Commissioner for India and that she will not change her course of study without his sanction.

N. A. RUST, M.A.,
Offg. Director of Public Instruction,
United Provinces.

ALLAHABAD:
The 27th October, 1921.

OFFICE OF THE DIRECTOR OF PUBLIC INSTRUCTION, UNITED PROVINCES.

NOTICE.

In accordance with the Government of India's resolution no. 731-743, dated the 1st of September, 1908 (Home department, Education), two State scholarships of £250* *per annum* each are awarded annually to Indians, as well as to candidates domiciled in British India and born in British India of parents habitually resident in India and not established there for temporary purposes only, by the Government of India for the critical and scientific study of Sanskrit and Arabic in Europe. These scholarships are open to well-qualified students with a genuine taste for Oriental studies and to those already employed as Professors of Sanskrit and Arabic in India and are awarded as follows in each alternate year:—

One for Sanskrit and one for Arabic.
Two for Sanskrit.

Two scholarships, one for *Sanskrit* and one for Arabic, will be awarded in 1922. Applications for these scholarships should be sent in to the Director of Public Instruction, United Provinces, Allahabad, not later than the 5th January, 1922, and should contain information detailed below:—

(1) Date and place of birth of applicant.
(2) Father's name and occupation.
(3) Applicant's nationality and period of residence in the province.
(4) Statement of the applicant's academic career in India.
(5) Statement of the course of study proposed to be followed in the United Kingdom.
(6) Statement regarding the applicant's circumstances.

The following papers should accompany each application:—

(*a*) Attested copy of matriculation or school-leaving certificate.
(*b*) Attested copies of conduct and other certificates, including testimonials from the applicant's professors and teachers.
(*c*) Certificate from the Civil Surgeon that the applicant is physically fit to undergo a course of study abroad.
(*d*) Written undertaking that if awarded a scholarship the applicant will devote himself *exclusively* during the tenure of the scholarship to the study of the subject for which the scholarship is granted.

N.B.—Should a State scholar endeavour to study Law or any other subject which is not cognate with his proper studies, he will be liable to forfeit his scholarship.

Candidates who are members of an affiliated college should send their applications through their Principal and those who are teachers in recognized schools through the Inspector of the division.

2. Approved candidates will be required to lodge with the Secretary for Indian Students at the India Office, London, before their arrival in England, the sum of £25 for initial expenses. They will be provided with a free second class passage to Europe and also with a return passage if they complete the full period of residence or are compelled by sickness to return within that period. On arrival in England they will be expected to fall in with the arrangements for their studies made for them and will be required to conform to such disciplinary rules as the High Commissioner for India may make in this behalf.

---

*(1) Language scholars at Oxford or Cambridge will be expected to become *non-collegiate* students and permission to join a college will not be granted unless admission to the University is not otherwise possible or unless the scholar is of undergraduate age and has rooms offered to him in college. In the event of a Language scholar having to join a college at *Oxford* or *Cambridge*, his allowance will be increased to £300 a year, to cover the additional expenses involved.

(2) A person who though born in a Native State or temporarily residing in a Native State is domiciled in British India, is eligible for the scholarship.

3. Some elementary knowledge of French and German should, if possible, be acquired by the State scholar before leaving India. As the vast range of Sanskrit literature makes it necessary for a scholar to select some special field of Sanskrit learning in which to specialize, the choice of the special branch of study should be made in India and the pertinent preparatory studies completed before the scholar leaves for Europe. Accordingly if a Sanskrit scholar wishes to specialize in—

(*i*) Veda or philology, he should have some knowledge of Latin and Greek;

(*ii*) Philosophy, he should have studied one of the systems of Indian philosophy in the original texts, and have read some Plato and Aristotle;

(*iii*) Post-Vedic literature, his reading should have extended considerably beyond the limits of the courses prescribed for the M.A. examination of an Indian university.

N. A. RUST, M.A.,
Offg. Director of Public Instruction,
United Provinces.

ALLAHABAD:
The 27th October, 1921.

State scholarship for domiciled European and Anglo-Indian girls.

One scholarship, of the value of £300 a year, will be awarded for educational or medical training. The term "educational training" will include the following:—

(i) Training of a secondary character for the teaching profession.
(ii) Ditto in one or more branches of domestic science.
(iii) Ditto as teachers of modern European languages.
(iv) Ditto as music mistresses.
(v) Ditto as art teachers.
(vi) Ditto in Kindergarten methods.

2. Applications must be forwarded to the Director of Public Instruction through the Inspector of European Schools, the Chief Inspectress of Girls' Schools, or the Principal of the affiliated college in which the applicant has last studeid.

3. Applications for the scholarship to be awarded in 1922 must reach the Director of Public Instruction not later than the 1st February, 1922.

4. The following papers should accompany the application:—

(*a*) Certificates or other papers showing that the candidate is domiciled in British India and born in British India of parents habitually resident in India and not established there for temporary purposes only.

(*b*) Certificate showing that the candidate has passed the B.A. examination, or possesses an Indian Degree in Medicine, together with an account of her school and college career and testimonials from her professors and teachers.

NOTE.—In the case of candidates applying for training as music mistresses a certificate of having passed the European High School or Senior Cambridge Local examination or some equivalent standard of general education and the highest certificate in music obtainable in India will be sufficient.

(*c*) A medical certificate of physical fitness to undergo abroad the course of study proposed.

(*d*) A statement by parent or guardian showing that the applicant has friends or relatives in England to whose charge her parents or guardians would be willing to entrust her during vacations.

N. A. RUST, M.A.,
Offg. Director of Public Instruction,
United Provinces.

ALLAHABAD:
The 27th October, 1921.

NOTE.—A person, who though born in a Native State or temporarily residing in a Native State is domiciled in British India, is eligible for the scholarship.

State scholarship for domiciled European and Anglo-Indian male students.

In accordance with the Government of India's resolution no. 221-238, dated the 19th March, 1907 (Home department, Education), one State scholarship of the value of £250 per annum (£300 when held in a college at Oxford or Cambridge) is awarded annually by the Government of India to a male candidate of the domiciled community for purposes of General Study.* The scholarship is awarded for a period of three or four years and is tenable in the United Kingdom or, with special sanction, in foreign countries.

2. Candidates for the scholarship must be over 18 years and under 22 years of age on the 31st March of the year in which they apply for the scholarship and must have passed the European High School or Senior Cambridge Local Examination or hold a degree of an Indian University. Preference is given to graduates.

3. Applications should be forwarded to the Director of Public Instruction, United Provinces, through the Inspector of European Schools, United Provinces, or the Principal of the affiliated college in which the applicant has last studied.

4. Applications for the scholarship to be awarded in 1922 must reach the Director of Public Instruction, United Provinces, not later than the 10th January, 1922. They should contain detailed information regarding the applicant's academic career and should state the course of study proposed to be pursued in the United Kingdom. The following papers should accompany each application :—

(a) Certificates or other papers showing that the candidate is domiciled in British India and born in British India of parents habitually resident in India and not established there for temporary purposes only.

NOTE.—A person who though born in a Native State or temporarily residing in a Native State is domiciled in British India, is eligible for the scholarship.

(b) Attested copy of High School or Senior Cambridge Local Examination certificate or of University diploma.

(c) Attested copies of conduct and other certificates including testimonials from the candidate's professors and teachers.

(d) Attested copy of baptismal certificate.

(e) Certificate from a civil surgeon showing that the candidate is physically fit to undergo a course of study abroad.

N. A. RUST, M.A.,

Offg. Director of Public Instruction, United Provinces.

NOTICE.

IT is notified for information that the Educational Department, United Provinces, will prescribe for Vernacular schools for boys Arithmetics in Urdu and Hindi as follows :—

Book I for classes I and II	According to the syllabus laid down in the curriculum for Vernacular schools for boys.
Book II for classes III and IV	
Book III for classes V to VII	

Books I and II should be in two series, (*i*) Urban Arithmetics and (*ii*) Rural Arithmetics. The "rules" may be treated in precisely the same manner in each of these series, but in the case of Urban Arithmetics the examples should be drawn mainly from the environment of a boy living in a large city, and in the case of Rural Arithmetics the examples should be drawn mainly from the environment of a boy living in a village or in a small town; the latter series should contain a large number of problems drawn from agriculture life. Publishers may submit both series or only one of the series.

All series which are accepted by the Educational Department as satisfactory will be prescribed as alternatives for use in schools.

The Arithmetics should be submitted in the first instance in English and in manuscript (preferably typed) together with (1) specimen printed pages in Urdu and Hindi showing the class of paper and kind of type proposed to be used (2) a statement showing the price of each book. Publishers of selected books will be asked to submit complete printed editions in Urdu and Hindi for final approval.

NOTICE.

IN pursuance of Government of India, Financial department, resolution no. 1251-F.E.,* dated the 30th September, 1914, notice is hereby given that candidates desirous of applying to have their names registered for the examination of candidates in India for admission to the general list of the Indian Audit department should send in their applications so as to reach the Director of Public Instruction, United Provinces, Allahabad, not later than the 14th February, 1922. The applications should contain information regarding the educational qualifications of the candidates as well as information regarding any services that may have been rendered to the State by their parents or family. The optional subjects in which they would, if nominated, offer themselves for the examination should also be stated. The following papers should accompany the application :—

(1) A duly verified statement of age. (A true copy of the School-Leaving or Matriculation examination certificate should be sent.)

(2) Attested copies of certificates of character and education.

(3) A statement, duly supported, showing the mathematical reading which the candidate has done, and the examinations involving mathematics which he has passed.

Candidates who are members of an affiliated college should send their applications through their Principal, and those who are teachers in recognized schools, through the Inspector of the division.

Copies of the rules may be obtained from the office of the Director of Public Instruction on application.

N. A. RUST, M.A.,
Offg. Director of Public Instruction,
United Provinces.

OFFICE OF THE INSPECTOR OF MUHAMMADAN SCHOOLS, UNITED PROVINCES.

WITH reference to the resolutions passed at the meeting of the Provincial Maktab Committee held on the 27th March, 1921, the following orders of Government are published for general information :—

(1) Moulvi Ismail's Urdu Readers may be inserted in the curriculum for maktabs, as alternative readers, with a note recommending their use in maktabs in which the majority of the pupils are Shias.

(2) The attention of District Boards is drawn to the resolution passed by the Provincial Maktab Committee regarding the inadequacy of the provision made for Islamia Training Classes and Islamia Girls' schools. The Committee suggested that the Boards, in consultation with the Muhammadan Educational Committee, should set apart funds in their budgets for the expansion and development of these institutions.

(3) 1. The Divisional Inspector of Schools should decide, after consultation with the Assistant Inspector of Schools and the Deputy Inspector of Muhammadan Schools, which Islamia schools and maktabs in the division should be inspected by the Deputy Inspector of Muhammadan Schools—

(*a*) twice a year,

(*b*) once a year,

(*c*) once every two years,

(*d*) once every three years,

2. Every Islamia school and aided maktab, should be inspected at least once a year, and if possible, twice a year. The second inspection (if one only is made by the Deputy Inspector of Muhammadan Schools) and both inspections (if no inspection is made by the Deputy Inspector of Muhammadan Schools) should be made by the Sub-Deputy Inspector in whose circle the school or maktab is situated, in the course of his tour.

3. A Sub-Deputy Inspector should write a report of his inspection of an Islamia school or maktab immediately on completing it and should fix a copy in the log-book. A copy of his inspection note and proposals for the improvement of the staff or revision of the expenditure should be submitted through the Deputy Inspector of Muhammadan Schools to the Divisional Inspector of Schools for transmission to the Chairman of the Board concerned.

4. In rule 4 of the rules made under section 18 of the United Provinces Primary Education Act, 1919 (VII of 1919) and issued under Government Notification no. 1853/XI—45, dated the 19th November, 1920, between the words "schools" and "issued" insert the words "or for the infant class and classes I to VII in the Secular Curriculum for Maktabs."

Dated JHANSI :
The 21st November, 1921.

ABUL HASAN,
Inspector of Muhammadan Schools,

THE UNITED PROVINCES OF AGRA AND OUDH.

Separate paging is given to this part, in order that it may be filed as a separate compilation.

Published by Authority.

ALLAHABAD, SATURDAY, DECEMBER 17, 1921.

PART IV.

CURRICULUM FOR ANGLO-VERNACULAR SCHOOLS FOR GIRLS WHO WISH TO READ UP TO THE MATRICULATION EXAMINATION OF THE UNIVERSITY OF ALLAHABAD OR THE SCHOOL LEAVING CERTIFICATE EXAMINATION OF THE DEPARTMENT FOR 1922-23.

THE courses and text-books are the same as those prescribed in the curriculum for Anglo-Vernacular schools for boys for 1922-23, subject to the following modifications :—

(1) In class A the Beacon Phonetic Chart in Hindi (omitting pages 23, 24, and 25) with Phonogram Cards and Word Cards (Price Rs. 4), published by the Methodist Publishing House, Lucknow, may be used in place of a primer in schools where in the opinion of the Inspectress there are teachers competent to teach by the "Beacon Method," but girls should not be required to purchase the chart.

(2) In class B the Beacon Primer in Hindi (Price 0-3-6) published by the Methodist Publishing House, Lucknow, may be used as an alternative text-book in schools where in the opinion of the Inspectress there are teachers competent to teach by the "Beacon Method."

(3) In classes I to VI girls may read the following Vernacular Readers for girls in place of the Vernacular readers prescribed for boys :—

Class I.

Urdu.—First half of Lower Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Lower Primary Girls' Reader, Part I, by the Newal Kishore Press, Lucknow.

Hindi.—First half of Lower Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Lower Primary Girls' Reader, Part I, by the Newal Kishore Press, Lucknow.

Class II.

Urdu.—Second half of Lower Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Lower Primary Girls' Reader, Part II, by the Newal Kishore Press, Lucknow.

Hindi.—Second half of Lower Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Lower Primary Girls' Reader, Part II, by the Newal Kishore Press, Lucknow.

Class III.

Urdu.—First half of Upper Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Upper Primary Girls' Reader, Part I, by the Newal Kishore Press, Lucknow.

Hindi.—First half of Upper Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Upper Primary Girls' Reader, Part I, by the Newal Kishore Press, Lucknow.

Class IV.

Urdu.—Second half of Upper Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Upper Primary Girls' Reader, Part II, by the Newal Kishore Press, Lucknow.

Hindi.—Second half of Upper Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Upper Primary Girls' Reader, Part II, by the Newal Kishore Press, Lucknow.

Class V.

Urdu.—First half of Lower Middle Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Middle Girls' Reader, Part I, by the Newal Kishore Press, Lucknow.

Hindi.—First half of Lower Middle Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Middle Girls' Reader, Part I, by the Newal Kishore Press, Lucknow.

Class VI.

Urdu.—Second half of Lower Middle Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Middle Girls' Reader, Part II, by the Newal Kishore Press, Lucknow.

Hindi.—Second half of Lower Middle Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Middle Girls' Reader, Part II, by the Newal Kishore Press, Lucknow.

(4) The course in Nature Study and Elementary Science does not apply to girls' schools.

But in girls' schools there may be an optional course in "Observation Lessons and Nature Study" classes III to VI; the course must be approved by the Inspectress of Girls' Schools.

(5) Sewing will be an additional compulsory subject from preparatory class A to class V.

(6) Domestic Science may be taken as one of the alternative subjects prescribed from class VI onwards.

(7) Calisthenics may be taught in place of Drill.

The course in Sewing is as follows:—

PREPARATORY SECTIONS.

Class A.

Threading a needle; making knots; use of thimble; tacking and running.

PART IV.

CURRICULUM FOR VERNACULAR TRAINING CLASSES FOR MALES, UNITED PROVINCES, FOR 1922-23.

I.—First Language—

(*a*) Literary course with grammar—

The text-books prescribed are—

Urdu.—1. Tuzuk-i-Urdu (smaller edition) by Khan Sahib Muhammad Ismail, Newal Kishore Press, Lucknow.

2. Risala-i-Qawaid-i-Urdu, Part II, Mission Press, Allahabad.

Hindi—1. Tulsi Das Ramayan, Aranya Kand, Indian Press, Allahabad.

2. The following selections from Sahitya Nava Niti, by Ambika Datta Vyasa, published by the Manager, Vyas and Co., Mau Mandir, Benares City:—

Prem Sagar; Raj Sinha; Ashcharya Vrittant; Sharirik Sudhar; Parimit Vyaya; Padumavati; Chhatra Prakash; Ekantvasi Yogi; Kashi Varnan; Dasharath Vilap; Shakuntala.

3. Hindi Middle Vyakaran, Newal Kishore Press, Lucknow.

(*b*) Translation or paraphrase into modern idiomatic prose from standard authors not read in the class.

(*c*) Letter-writing in current idiomatic style and in the proper form of courtesy and address.

II.—Second Language—

(*a*) *Reading.*—To read at sight from the text-books and to explain words, allusions, and sentences.

The text-books prescribed are—

Urdu.—1. Urdu Reader, no. V, by Khan Sahib Muhammad Ismail, Newal Kishore Press, Lucknow.

Hindi.—1. Tulsi Das Ramayan, Sundar Kand, Indian Press, Allahabad.

2. Theth Hindi-ka Thath, by Ajudhya Singh Upadhyaya, Khadga Vilas Press, Bankipur.

(*b*) *Grammar*—

Urdu.—Risala-i-Qawaid-i-Urdu, Part I, Mission Press, Allahabad.

Hindi.—Bhasha Vyakaran, by Chandra Mauli Sukul, Indian Press, Allahabad.

(*c*) *Writing.*—To write passages to dictation from a book of equal difficulty with the text-book. To compose and write letters on ordinary topics, also brief descriptions of common objects.

NOTES.—(1) The students of the Training Classes in the Kumaun division provided with an Urdu teacher may read "Urdu Reader for Classes III and IV of Vernacular Schools for Boys," Newal Kishore Press, Lucknow, and "Sawad-i-Urdu," by Khan Sahib Muhammad Ismail, Newal Kishore Press, Lucknow, in lieu of "Urdu Reader no. V," by the same author.

(2) The students of such Training Classes in the Kumaun division as are not supplied with an Urdu teacher are allowed to take the following additional course in Hindi in place of Urdu :–

1. Satya Harish Chandra Natak, by Bharatendu Harish Chandra, published by the Nagri Pracharini Sabha, Benares.

2. Tulsi Das Ramayan, Ayodhya Kand (up to the end of *doha* 141), edited by Ram Ratan Sharma and Chandra Hansa Sharma, Ratna Ashram, Agra (12 annas).

III.—*Arithmetic.*—The following with special reference to teaching the same :—

Numeration and notation; the four simple rules; the four compound rules and reductions in Indian weights and measures in common use in the United Provinces; H. C. F. by factors; L. C. M.; the four simple rules in vulgar fractions vulgar fractions of concrete quantities; practice; account-keeping (*roznamcha* and *khata*); percentages; the unitary method; simple interest; easy examples in compound interest.

Text-book.—Vernacular Final Arithmetic (Urdu or Hindi), Macmillan and Co.

IV.—*Geography—General.*—Revision of the Geography of India and Asia, with special reference to the teaching of the Geography of India. Maps to be drawn.

Physical.—Factors which determine climate, evaporation, the presence of water vapour in the air, hot air can hold more water vapour than cold air, condensation, clouds, rain, dew, mist, the three stages of a river, winds, the monsoons, morning, noon, and night.

The text-book recomended for use is—

Vernacular School Geography (Urdu or Hindi) for Classes V to VII of Vernacular Schools, Longmans, Green and Co.

V.—*Principles and Practice of Teaching.*—As in Risala-i-Talim-o-Tarbiyat, Part I (Urdu or Hindi), by Iqbal Kishen or in Hadi-ul-Mudarrisin (Urdu or Hindi), by Ladli Dass.

NOTE.—Manual for Teachers of Primary Schools in India, by J. A. Richey (Macmillan and Co.), in Urdu or Hindi, is recommended for the use of teachers.

VI.—*Drawing*—

Stage I.	
A.—The circle	Turned objects having a circular outline, as a plate, coin, hoop, wheel, clock-face, sun, moon, etc.
B.—Modifications of the circle ...	Orange, apple, *ghara*, football, pomegranate.
Stage II.	
A.—The ellipse	Circular objects seen in perspective become ellipses; plate, coin, hoop, clock-face, rim of a vessel, etc. Also felt-cap, spectacle glass, etc.
B.—Modifications of the ellipse ...	Egg, guava, brinjal, *papita*, jackfruit, gourd, cocoanut, pear, etc.
Stage III. Simple straight-lined objects.	
A.—Right-angled	Envelope, table-top, door-window, box-top, black-board, etc.
B.—Modifications	Flag, *takhti*, T-square, may, etc.
C.—Perspective	Any of the above classes of objects seen in perspective.

NOTE.—The method to be adopted in teaching the subject is given in the Appendix.

VII.—*Object Lessons.*—Revision of the courses in object lessons prescribed for primary schools and for class V of middle schools with special reference to the teaching of the course prescribed for primary schools. (To be taught only where a qualified teacher is available.)

VIII.—*Physical Exercises.*—The following exercises given in Kempster and Kaye's Physical Drill in Urdu or Hindi (Macmillan and Co.), special reference to teaching the course prescribed for primary schools:—

Chapters.—I to III.—The whole. Chapter IV.—The whole (optional), races, jumps, and tug-of-war.

A. H. MACKENZIE, M.A., B.SC.,
Offg. Director of Public Instruction,
United Provinces.

ALLAHABAD:
The 17th December, 1921.

APPENDIX.

TRAINING CLASS COURSE IN DRAWING.

Method.

THE examination test is drawing on the blackboard only, but to enable students to pass this test they should be trained in the principles of object-drawing by means of work on paper and subsequently apply these principles to instruction of a class from the blackboard.

As it is a teacher's course, the method to be adopted should be that of drawing on the blackboard to a large scale, i e., 3 feet in each direction, as being a convenient stretch for the arm, and the drawing being then within the compass of the eye as seen by the teacher and yet large enough to be seen by the pupil at a distance of 20 feet.

The drawings should be executed in as free a manner as possible, the arm being straights, but flexible and the teacher standing not less than two feet from the blackboard.

The principal aim of the drawing to be taught later is to furnish an illustrated class record of the study of the character, etc., of the things seen by the scholars in their object lessons. Thus it is necessary that the drawing should also be done in books so as to be available for future reference.

These drawings should be free in character and, when possible, should be of the same size as the original; but if this is not possible, the scale of the enlargement or reduction should be stated below the drawing.

The standard of excellence in the drawing should not be that which shows the most neatly-executed outline drawing of the subject studied, but rather that which most clearly conveys or records the point or points brought out in the lesson given.

It will be advisable therefore for the teacher (as well as his pupils) to combine his drawing lesson with his object lesson, and, to ensure this, the object lessons and drawing lessons should, if possible, be consecutive periods.

The method to be adopted when teaching this subject in the vernacular schools would be that in the object lesson the teacher will draw attention to certain facts and impress them on the minds of his pupils by large sketches on the blackboard. These should be carefully copied in their books, or other drawing should be made by the pupils themselves from the object under study.

This principle should also be adopted in the teacher's study, but it will be expected that his resulting drawings will show more searching observation and be executed so as to record best the character of the object under study and to impress most clearly upon the class the point illustrated.

The drawings on the blackboard (if in outline only) should be drawn with white chalk, but if representation of solid things be attempted in a solid way, they should be drawn with coloured chalks in as nearly the true colours as possible.

Sometimes, where it is found difficult to make a true rendering on a black surface, a large sheet of brown or white paper should be used for chalk and charcoal work.

For work in books, usually an HB pencil will be found sufficient.

In drawing fruits sectional drawings will be of great advantage.

In all possible cases drawings should be executed without the aid of guiding lines, and even when necessary very few guiding lines should be used.

OFFICE OF DIRECTOR OF PUBLIC INSTRUCTION, UNITED PROVINCES.

LEAVE AND APPOINTMENTS.

ORDER NO. V.E/224/XXXVII.

Dated Allahabad, the 15th December, 1921.

With effect from the date he takes charge, Munshi Ghulam Mustafa Khan, B.A., to officiate as Sub-Deputy Inspector of Schools, Aligarh, on Rs. 100 per mensem, *vice* M. Ashfaq Ahmad Khan, transferred to the teaching line.

Pandit Shankar Dayal Misra, C.T., Assistant Master, Government High School, Rae Bareli, on probation, is confirmed in his appointment.

A. H. MACKENZIE, M.A., B.SC.,

Offg. Director of Public Instruction, United Provinces.

Curriculum for Vernacular Schools for Boys, United Provinces, for 1922-23.*

The following points regarding the Curriculum should be carefully noted :—

ARITHMETIC.

CLASS IV.

Simple lessons in account-keeping (*roznamcha* and *khata*) should be introduced wherever the teacher is capable of giving such instruction.

Object lessons.

In no case is the course to be introduced in a school unless the inspecting officer is satisfied that there is a teacher on the staff who is competent to teach it. Where no such teacher is available, object lessons should be given according to existing practice.

Hygiene and Temperance Teaching.

Informal talks in class on hygiene and on the evils, both physical and moral, resulting from intemperance should be held by teachers in the middle classes at intervals during the session. Head teachers should see that the subjects are not neglected and that the teaching is not merely perfunctory.

NOTE.—Books recommended for the use of teachers are—

HYGIENE.

Articles on Health by Major Megaw, I.M.S. (in the *War Journal*). Aiza-o-Sehat-i-Insani in Urdu or Manushi Anga tatha Swastha in Hindi, by K. C. Bhattacharya, published by the Indian Press, Allahabad.

TEMPERANCE.

Manual of Temperance (Urdu or Hindi) by Munshi Mewa Ram, B.A., late Inspector of Schools, Jhansi division.

N.B.—Copies of this curriculum may be obtained from the Superintendent, Government Press, United Provinces, Allahabad, on payment of three annas, excluding postage.

CURRICULUM FOR VERNACULAR SCHOOLS FOR BOYS FOR 1922-23.

PREPARATORY SECTION.

Class A.

1. *Reading.*—To read simple and compound characters at sight.

NOTE.—No text-books are prescribed for this class and none should be used, but reading sheets, preferably illustrated, should be used. The teachers should also use the blackboard to show how letters and words are formed.

2. *Writing.*—To copy on *takhtis* characters and easy monosyllables from the blackboard, from large sheets or from head-lines written on *takhtis* by the teacher; also to write them to dictation.

3. *Arithmetic.*—Notation and numeration of numbers as far as 50 to be taught by exercises. Construction and memorizing of tables up to 5×10.

4. *Object lessons.*—As in the scheme prescribed (*vide* Appendix III).

5. **Drawing.*—Drawing of straight lines, squares, and oblongs.

6. *Physical exercises*—As prescribed in Appendix II.

Class B.

1. *Reading.*—To read sentences at sight from the text-book and know the meanings of words.

2. *Writing.*—To copy on *takhtis* and also to write to dictation sentences from the text-book.

3. *Arithmetic.*—Notation and numeration of numbers as far as 1,000. Simple addition and subtraction; answers not to exceed three figures. Construction and memorizing of tables up to 10×16. Simple multiplication and division by numbers not greater than 5.

4. *Object lessons*—As in the scheme prescribed (*vide* Appendix III).

5. **Drawing*—On slate.—Drawing of curved lines, circles, and figures like circles bounded by curved lines. Drawing to be taught on the blackboard; no books to be prescribed.

6. *Physical exercises*—As prescribed in Appendix II.

LOWER PRIMARY SECTION.

Class I.

1. *Reading.*—To read accurately at sight from the text-book and to explain the meanings of words and sentences. To recite 20 lines of poetry.

2. *Writing.*—To write on *takhtis* sentences to dictation from the text-book. Copy-slips should be used.

3. *Arithmetic.*—Notation and numeration extended. The four simple rules. Addition and subtraction in Indian money; answers not to exceed Rs. 1,000. Ideas of fractions ¼, ½, ¾, to be taught by concrete examples. Tables up to 10×¼, 10×½, 10×¾, to be constructed and learnt.

4. *Object lessons*—As in the scheme prescribed (*vide* Appendix III).

5. **Drawing*—As prescribed in Appendix II.

6. *Physical exercises*—As prescribed in Appendix II.

Class II.

1. *Reading.*—To read accurately at sight from the text-book and to explain the meanings of words and sentences. To recite 30 lines of poetry.

2. *Writing.*—To write on paper sentences to dictation. Copy-slips should be used. Simple letters to be composed and written by boys.

3. *Arithmetic.*—The four compound rules in Indian money and weight and measures in common use with miscellaneous examples. Indian symbols for sums in money and weights also to be taught.

NOTE.—Boys reading Nagri will learn the Hindi symbols and those reading Urdu will learn the raqams, but any boy may learn both.

Tables up to 20×¼, ½, ¾, 1¼, 1½, 2½, to be constructed and learnt.

4. *Geography.*—The meaning and use of a map; the points of the compass; explanation of simple geographical terms by reference to a map or diagram. Illustrations by means of models to be encouraged. Teachers should be required to draw large scale-maps of the village to be fastened to the wall and used with the class.

---

* This subject is optional.

5. *Object lessons*—As in the scheme prescribed (*vide* Appendix III).
6. **Drawing*—As prescribed in Appendix II.
7. *Physical exercises*—As prescribed in Appendix II.

UPPER PRIMARY SECTION.

Class III.

1. *Reading.*—To read at sight from the text-books and to explain the words and sentences. To recite 40 lines of poetry from the literary reader. Practice in reading simple specimens of script.
2. *Grammar.*—Oral teaching of elementary grammar in its practical application.
3. *Writing.*—To write passages to dictation from the text-books or from books of equal difficulty. Copy-books or slips to be used. Letters to be composed and written by the boys with proper forms of address.
4. *Arithmetic.*—L. C. M. by factors. Vulgar fractions. Exercises, both oral and written, on the rules already learnt and having a direct bearing on matters of every-day concern.
5. *Geography*—Map of the district, with simple notes on historical events.
6. *Object lessons*—As in the scheme prescribed (*vide* Appendix III).
7. **Drawing*—As prescribed in Appendix II.
8. *Physical exercises*—As prescribed in Appendix II.

Class IV.

1. *Reading.*—To read at sight from the text-books and from other books and to explain words, allusions, and sentences. Reading of the script, more particularly *patwaris*, papers (in rural schools) and such documents as *pattas* and *qabuliats*. To recite 60 lines of poetry from the literary reader.
2. *Grammar.*—Parts of speech, syntax, and etymology of words.
3. *Writing.*—To write passages to dictation from a book of equal difficulty with the text-books. To compose and write complete letters on ordinary topics with proper forms of address; also brief descriptions of common objects.
4. *Arithmetic.*—Simple proportion by unitary method; simple interest; practice; simple lessons in account-keeping (*roznamcha* and *khata*). Simple lessons in compound interest. Urdu and Hindi figures for weights and measures.
5. *Geography*—Principal features, provinces, and the most important towns of India to be taught from the map; United Provinces to be taught in detail.
6. *Object lessons*—As in the scheme prescribed (*vide* Appendix III.)
7. **Drawing*—As prescribed in Appendix II.
8. *Physical exercises*—As prescribed in Appendix II.

MIDDLE SECTION.

Class V.

1. *Language.*—(*a*) Literary course with grammar.

(*b*) Translation or paraphrase into modern idiomatic prose from standard authors not read in the class.

(*c*) Letter-writing in current idiomatic style and in the proper form of courtesy and address.

2. *Mathematic*—(*a*) *Arithmetic.*—Revision with special attention to mental problems with small numbers. Simple calculations in the four simple rules with decimal fractions (excluding recurring decimals). Conversion of vulgar fractions into decimal fractions to a given number of places and *vice versa*. The four compound rules and reductions in British weights and measures in common use, instruction to be as realistic as possible. Oral and written problems in the above.

(*b*) *Geometry.*—Drawing and measurement of straight lines and angles; parallel straight lines; angles of a triangle; construction of triangles and parallelograms.

3. (*a*) *History.*—Stories from Indian History;

---

* This subject is optional.

(*b*) *Geography.*—Shape, size, and surface of the earth; sphere and hemisphere; poles and equator; circumference and diameter; land and water hemispheres; eastern and western hemispheres; the five oceans and five continents.

The essentials of the Geography of India:—

Position; coasts and islands; the main physical features; climate; productions; provinces and chief Native States; the most important towns.

NOTE.—In connection with the climate of India there should be a preliminary treatment of the following points of Physical Geography:—

Factors determining the climate of a place—distance from the equator, distance from the sea, height above sea-level, and distribution of rain.

4. *Object lessons*—As in the scheme prescribed (*vide* Appendix III).

5. *Second vernacular.*—*Reading* (omitting Recitation) and *Writing* as in Class II,

Or

Drawing.—As prescribed in Appendix II,

Or

English.—The course prescribed for classes III and IV of Anglo-Vernacular schools for boys (*vide* syllabus given in Appendix I)

6. *Physical exercises*—As prescribed in Appendix II.

Class VI.

1. *Language.*—(*a*) Literary course with grammar.

(*b*) Translation or paraphrase into modern idiomatic prose from standard authors not read in the class.

(*c*) Letter-writing in current idiomatic style and in the proper form of courtesy and address.

2. *Mathematics.*—(*a*) *Arithmetic.*—Revision, measurement of the area of a rectangle, and the volume of a rectangular solid, when the lengths of the sides are given in feet or inches to one place of decimals. Square root; simple and compound proportion; oral and written problems in the above.

(*b*) *Geometry*—As prescribed in Appendix II.

3. (*a*) *History.*—Indian History in outline to the decline of the Moghal Empire with reference to the following:—

Introductory.—The country and its people.

(1) *The Hindu Period.*—The Aryans; how we learn about the past; Buddha and his story; Alexander the Great in India: Chandra Gupta and his court; Asoka; Kanishka; the Gupta Empire; Fa-hien; Harsha—Hioen Tsang; the Rajputs.

(2) *The Muhammadan Period.*—Mahmud of Ghazni; Muhammad Ghori; Sultana Razia and Balban; Alauddin; Muhammad Tughlak; Firoz; Timur; Babar; Humayun and Sher Shah; Akbar; Jahangir; and Shahjahan; Aurangzeb; Sivaji; decline of the Moghal Empire; the Mahrattas.

(*b*) *Geography—General.*—The essentials of the Geography of Asia; position; coasts and islands; the main physical features; brief description of climate; most important productions; main political divisions and most important towns.

Physical.—Evaporation. Cooling effect of evaporation. The presence of water vapour in the air. Hot air can hold more water vapour than cold air. Condensation. Formation of clouds. Dew and mist. Rain. Formation of springs. The three stages of a river. Wind. The monsoons. Factors which determine climate.

4. *Second Vernacular.*—*Reading* (omitting Recitation and Script-reading), *Grammar* and *Writing* as in Class III,

Or

Drawing—As prescribed in Appendix II.

Or

English.—The course prescribed for class V of Anglo-Vernacular schools for boys (*vide* syllabus given in Appendix I).

5. *Physical exercises*—As prescribed in Appendix II.

Class VII.

1. *Language.*—*(a)* Literary course with Grammar.

(b) Translation or paraphrase into modern idiomatic prose from standard authors not read in the class.

(c) Letter-writing in current idiomatic style and in the proper form of courtesy and address.

2. *Mathematics*—*(a) Arithmetic.*—Revision. Proportional parts. More difficult examples in percentage and in simple and compound proportion. Profit and loss. Oral and written problems in the above.

NOTE.—Pupils should be taught how to solve a simple equation with one unknown quantity and should be encouraged to use symbols in the solution of questions in Arithmetic.

(b) Geometry.—As prescribed in Appendix II.

3. *(a) History.*—Indian History in outline from the decline of the Moghal Empire with reference to the following:—

(1) The coming of the European traders. (2) Dupleix and Clive. (3) Rise of the East India Company to the supremacy in India. Warren Hastings. Cornwallis. Wellesley. (4) The Company as the paramount power in India. Lord Hastings and his three wars—the Burmese wars—Lord William Bentinck and his reforms. The Afghan and Sikh wars. Dalhousie's administration—the Mutiny—Queen Victoria's Proclamation. Development since 1858.

(b) Geography—General.—Outline of the Geography of the World: Europe, America, Canada, Australia, New Zealand, British South Africa. The outline to consist of a brief description of the following:—The most prominent physical features, the climate, the life and work of the people, and the very great towns.

Physical.—The earth; morning, noon, and night; latitude and longitude; the zones; the seasons.

4. *Second Vernacular.*—*Reading*—(omitting Recitation and Script-reading), *Grammar* and *Writing* as in class IV,

Or

Drawing—As prescribed in Appendix II,

Or

English.—The course prescribed for class VI of Anglo-Vernacular schools for boys (vide syllabus given in Appendix I).

5. *Physical exercises*—As prescribed in Appendix II.

APPENDIX I.

Syllabus of the courses in English for classes III to VI of Anglo-Vernacular schools for boys.

UPPER PRIMARY SECTION.

Class III.

Conversation and reading.—The early stages of instruction will be mainly oral, and should include systematic training in the sounds of spoken English, in connection with the pronunciation of easy words. In the later stages the class should be able to carry on simple conversation about familiar objects and actions.

To read with correct pronunciation an easy primer; to render into the vernacular easy sentences from the primer; to use the words of the primer in simple sentences; and to answer in English simple questions based on the matter in the primer.

Spelling and writing.—To spell the words of the primer; copy-writing in ruled books of easy familiar words; writing in copy-books (in the latter half of the course); dictation in ruled books of words and sentences previously read in the primer.

Class IV.

Conversation and reading.—To converse about common objects and actions; to read with correct pronunciation from a reader; to render into vernacular easy sentences from the reader; to use the words of the reader in simple sentences and to answer in English simple questions based on the matter in the reader.

Spelling and writing.—To spell the words of the reader; dictation in ruled books of words and sentences previously read in the reader; writing in copy-books.

Grammar and composition.—Formal grammar should be commenced; division of a sentence into two parts: subject and predicate. To point out nouns, pronouns, adjectives, and verbs (without sub-classification.) Oral and written exercises in the above.

Easy written composition (at least once a week), e.g., completion of sentences. Easy written composition from the vernacular into English idiomatic sentences (at least once a week).

LOWER MIDDLE SECTION.

Class V.

Conversation and reading.—To carry on simple conversation in English; to read with correct pronunciation from a reader; to render into the vernacular passages from the reader; to use the words of the reader in simple sentences and to answer in English questions based on the matter in the reader.

Spelling and writing.—To spell the words of the reader; dictation in ruled books of words and sentences previously read in the reader; writing in copy-books.

Grammar and composition.—Revision of previous grammar in connection with more difficult sentences. Number and gender of nouns and pronouns; adverbs; prepositions; and conjunctions (without sub-classification); interjections; the definite and the indefinite articles. The conjugation of the three simple tenses; the verb "to have" and the verb "to be." Oral and written exercises in the above.

Written composition (at least once a week) e.g., using the words and phrases of the reader in simple sentences. Written composition from the vernacular into English idiomatic sentences (at least once a week).

Class VI.

Conversation, reading, and recitation.—To carry on simple conversation in English; to read with correct pronunciation from a reader; to render into the vernacular passages from the reader; to use the words of the reader in simple sentences, and to answer in English questions based on the matter in the reader. To recite from memory passages chosen from the reader.

Spelling and writing.—To spell the words of the reader; dictation in ruled books of passages chosen chiefly from the reader; writing in copy-books.

Grammar and composition.—Revision of previous work in grammar; nouns in opposition; classification of nouns; pronouns; adjectives and adverbs; cases of nouns and pronouns; direct or indirect object; verbs; number and person; transitive and intransitive; weak and strong; participles; conjugation of remaining tenses. Analysis of simple sentences. Oral and written exercises in the above.

Written composition (at least once a week), e.g., using the words and phrases of the reader in simple sentences, reproduction of simple stories, practice in answering in writing easy questions on the subject-matter of the text. Written composition from the vernacular into English idiomatic sentences and continuous prose. In connection with the above incidental instruction in elementary points of arrangement, construction, and punctuation.

APPENDIX II.

ALPHABET CHARTS AND TEXT-BOOKS.

Alphabet Charts.

Class A.

The following charts are approved for use:—

Urdu.—Urdu Chart no. I (illustrated), showing simple letter. (Price Re, 1-12), Indian Press, Allahabad.

Urdu Chart (unillustrated) showing simple letters in thick type. (Price Re. 1), Gulab Singh and Sons, Lahore.

Urdu Chart, no. II (unillustrated), showing simple and compound letters. (Price Re. 1), Indian Press, Allahabad.

Urdu Chart no. III (unillustrated), showing combination of vowels. (Price Re. 1), Indian Press, Allahabad.

Urdu Chart (illustrated) containing pictures of inanimate objects. (Price As. 12), Indian Press, Allahabad (for Islamia schools).

Hindi.—Hindi Charts, nos. I and II (illustrated), showing simple letters. (Price Rs. 3 8 for both), Indian Press, Allahabad.

Hindi Alphabet Chart, no. I (unillustrated), in bold type, showing simple letters printed in black colour. (Price Rs. 1-4), Newal Kishore Press, Lucknow.

Hindi Chart (unillustrated) showing combination of vowels, printed in red and black colours (Price, Rs. 1-4), Newal Kishore Press, Lucknow.

Two Hindi Alphabet Charts (unillustrated) showing combination of vowel. (Price Re. 2 for both), Girdhar Lal Pacholi, Shahpara, Aligarh.

Hindi Alphabet Chart (unillustrated), showing combination of consonants in two colours. (Price Rc. 1-4), Newal Kishore Press, Lucknow.

VERNACULAR READERS.

Class B.

Urdu.—Urdu Reader for Preparatory Class B of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Hindi.—Hindi Reader for Preparatory Class B of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Class I.

Urdu.—Urdu Reader for Class I of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Hindi.—Hindi Reader for Class I of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Class II.

Urdu.—Urdu Reader for Class II of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Hindi.—Hindi Reader for Class II of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Class III.

**Urdu.*—Urdu Reader for Classes III and IV of Vernacular Schools, published by the Newal Kishore Press, Lucknow, and Sawad-i-Urdu, by Khan Sahib Maulvi Muhammad Ismail, published by the Newal Kishore Press, Lucknow.

**Hindi.*—Hindi Reader for Classes III and IV of Vernacular Schools, published by the Newal Kishore Press, Lucknow, and Hindi *Praveshikha* (revised edition of 1919) published by the Indian Press, Allahabad.

Class IV.

**Urdu.*—Urdu Reader for Classes III and IV of Vernacular Schools, published by the Newal Kishore Press, Lucknow, and Sawad-i-Urdu by Khan Sahib Maulvi Muhammad Ismail, published by the Newal Kishore Press, Lucknow.

**Hindi.*—Hindi Reader for Classes III and IV of Vernacular Schools, published by the Newal Kishore Press, Lucknow, and Hindi Praveshika (revised edition of 1919), published by the Indian Press, Allahabad.

Class V.

Urdu.—Adib-i-Urdu—(prose—up to the end of the lesson "Swamiji ka dusra safar," and poetry—up to the end of the qasida on "Julsa-i-Madrasa Tibbiya, Delhi") by Khan Sahib Maulvi Muhammad Ismail, published by the Newal Kishore Press, Lucknow, or Aina-i-Urdu, by Muhammad Aslam Saifie, Newal Kishore Press, Lucknow. (Price annas 5).

Hindi.—Hindi Middle Reader, Part I, published by the Indian Press, Allahabad.

Class VI.

Urdu.—Adib-i-Urdu (prose—from the lesson "Khud gharaz dost par bharosa aur bap ki nafarmani" to the end of the prose portion, and poetry from the qasida on "Tehniyat Jashn Jubilee Huzur Malka Muazzama Victori Qaisar-i-Hind" to the end of the poetry portion), published by the Newal Kishore Press, Lucknow, or Shahid-i-Urdu, by Muhammad Aslam Saifi, Newal Kishore Press, Lucknow. (Price annas 5).

---

*The literary readers (Swad-i-Urdu and Hindi Praveshika) prescribed for use in Classes III and IV should not be commenced until the scholar has made sufficient progress in the common language to enable him to study the literary reader with advantage.

Hindi.—Hindi Middle Reader, Part II, published by the Indian Press, Allahabad.

Class VII.

Urdu.—Urdu Final Reader, published by the Indian Press, Allahabad.

Hindi.—Hindi Final Reader, published by the Indian Press, Allahabad.

GRAMMARS.

Class IV.

Urdu.—Risala-i-Qawaid-i-Urdu, Part I, published by the Mission Press, Allahabad.

Hindi.—Bhasha Vyakaran, by Chandra Mauli Sukul, published by the Indian Press, Allahabad.

Class V to VII.

Urdu.—Risala-i-Qawaid-i-Urdu, Part II, published by the Mission Press, Allahabad.

Hindi.—Hindi Middle Vyakaran, published by the Newal Kishore Press, Lucknow.

SCRIPT READER.

Classes III and IV.

Urdu.—Insha-i-Khat-i-Shikasht, by Abul Hasan, published by Khazan Singh Sharma, Bookseller, Sipat Bazar, Meerut, (Price annas 3); or Khat-i-Shikasht-ki Pahli Kitab, by Basharat Ali, Chauk Bazar, Bulandshahr, (Price Re-0-4-3).

RECITATION.

Classes I and II.

Urdu.—Nazm-i-Reader, Part I, by Fida Husain Khan, published by Khazan Singh Sharma, bookseller, Sipat Bazar, Meerut, (Price anna 1), or Intikhab Nazm Reader, Part I, by Hamid Hasan Qadri, published by *Ram Dayal Ram Saran and Co., publishers and booksellers, Cawnpore.* (Price anna 1)

Hindi.—Hindi Padyavali, Part II, by Ramji Lal Sharma, Hindi Press, Allahabad. (Price Re 0-1-6).

COPY-SLIPS.

Class I.

Urdu.—Copy-slip, no. I, published by the Indian Press, Allahabad.

Hindi.—Copy-slip, no. I, published by the Indian Press, Allahabad.

Or

Copy-slip, no. I, by Kamta Prasad, published by Raghunath Prasad and Sons, Cawnpore.

Classes II and III.

Urdu.—Copy-slip, no. II, published by the Indian Press, Allahabad.

Hindi.—Copy-slip, no. II, published by the Indian Press, Allahabad.

Or

Copy-slips nos. II and III by Kamta Prasad, published by Raghunath Prasad and Sons, Cawnpore. (Price 1 *anna* 3 *pies each.*)

ARITHMETIC.

Classes I and II.

Urdu.—Lower Primary Arithmetic, published by Macmillan & Co.

Hindi.—Lower Primary Arithmetic, published by Macmillan & Co.

Classes III and IV.

Urdu.—Upper Primary Arithmetic, published by Macmillan & Co.

Hindi.—Upper Primary Arithmetic, published by Macmillan & Co.

Classes V to VII.

Urdu.—Vernacular Final Arithmetic, published by Macmillan & Co.

Hindi.—Vernacular Final Arithmetic, published by Macmillan & Co.

GEOMETRY.

Class V.

Pierpoint's Elements of Geometry in Theory and Practice, Part I, Experimental Section, in Urdu or Hindi (Pupil's edition), published by the Indian Press, Allahabad.

Class VI.

Pierpoint's Elements of Geometry in Theory and Practice, Part I, in Urdu or Hindi (Pupil's edition), published by the Indian Press, Allahabad, as follows:—

Urdu or Hindi version—Theoretical section (up to the end of theorem 21).

Class VII.

Pierpoint's Elements of Geometry in Theory and Practice, Parts I to III, in Urdu or Hindi (Pupil's edition) published by the Indian Press, Allahabad, as follows:—

Urdu or Hindi version—Part I. Theoretical section (from definition 39 to the end of the section). Practical Section (the whole). Parts II and III—Experimental section (up to the end of the chapter on the theorem of Pythagoras). Theoretical section (up to the end of theorem 33). Practical section (the chapter on the practical determination of the areas of irregular rectilineal figures).

HISTORY.

Class V.

Easy Stories from Indian History (Urdu or Hindi), Macmillan & Co.

Class VI.

Urdu.—Urdu History of India, Part I, by E. Marsden and Jia Ram, Macmillan & Co.

Hindi.—Hindi History of India, Part I, by E. Marsden and Sita Ram, Macmillan & Co.

Class VII.

Urdu.—Urdu History of India, Part II, by E. Marsden and Jia Ram, Macmillan & Co.

Hindi.—Hindi History of India, Part II, by E. Marsden and Sita Ram, Macmillan & Co.

GEOGRAPHY.

Class IV.

Urdu.—Vernacular School Geography for Class IV, published by Longmans, Green & Co.

Hindi.—Vernacular School Geography for Class IV, published by Longmans, Green & Co.

Classes V to VII.

Urdu.—Vernacular School Geography for Classes V to VII, published by Longmans, Green & Co.

Hindi.—Vernacular School Geography for Classes V to VII, published by Longmans, Green & Co.

DRAWING.

Class I.

Macmillan's Official Drawing Book, no. 1; or Nelson's Graduated Drawing Book, no. 1; or Indian Drawing Books for Vernacular Schools, Book 1, published by the Indian Press, Allahabad; or Banbery's Scholars' Drawing Book no. 1, in Urdu or Hindi, published by the Indian Press, Allahabad; or Indian Drawing Copy-slips for Vernacular Schools, no. 3, published by the School Book and Apparatus Dépôt, Lucknow (slates to be used during the first half year, then paper).

Class II.

Macmillan's Official Drawing Book, no. 2; or Nelson's Graduated Drawing Book, no. 2; or Indian Drawing Books for Vernacular Schools, Book 2, published by the Indian Press, Allahabad; or Banbery's Scholars' Drawing Book, no. 2, in Urdu or Hindi, published by the Indian Press, Allahabad; or Indian Drawing Copy-slips for Vernacular Schools, no. 4, published by the School Book and Apparatus Dépôt, Lucknow.

Class III.

Macmillan's Official Drawing Book, no. 3; or Nelson's Graduated Drawing Book, no. 3; or Indian Drawing Books for Vernacular Schools, Book 3, published by the Indian Press, Allahabad; or Banbery's Scholars' Drawing Book, no. 3, in Urdu or Hindi, published by the Indian Press, Allahabad; or Indian Drawing Copy-slips for Vernacular Schools, no. 5, published by the School Book and Apparatus Dépôt, Lucknow.

Class IV.

Macmillan's Official Drawing Book, no. 4; or Nelson's Graduated Drawing Book, no. 4, or Indian Drawing Books for Vernacular Schools, Book 4, published by the Indian Press, Allahabad; or Banbery's Scholars' Drawing Book, no. 4, in Urdu or Hindi, published by the Indian Press, Allahabad; or Indian Drawing Copy-slips for Vernacular Schools, no. 6, published by the School Book and Apparatus Dépôt, Lucknow.

Class V.

Macmillan's Official Drawing Book, no. 5, or Nelson's Graduated Drawing Book, no. 5; or Indian Drawing Books for Vernacular Schools, Book 5, published by the Indian Press, Allahabad; or Banbery's Scholars' Drawing Book, no. 5, Urdu or Hindi, published by the Indian Press, Allahabad.

Class VI.

Macmillan's Oriental School Drawing Book, Part I; or Nelson's Graduated Drawing Book, no. 6 or 7; or Indian Drawing Books for Vernacular Schools, Book 6, published by the Indian Press, Allahabad; or Banbery's Scholars' Drawing Book, no. 6, Urdu or Hindi, published by the Indian Press, Allahabad.

Class VII.

Macmillan's Oriental School Drawing Book, Parts II and III; or Nelson's Graduated Drawing Book, no. 9.

NOTE.—Teachers of drawing in schools where Banbery's Scholars' Drawing Books are used are recommended to use "Teachers' Drawing Manual" in Urdu or Hindi, by H. Banbery, published by the Indian Press, Allahabad.

ENGLISH.

Class.	Macmillan's Readers.	Tipping's Direct Method Books.
V	King Primer, or Conversational Readers, First and Second Primers.	First Direct Method English Reader.
	New English Reader 1, or Conversational Readers, Readers I and II.	Second ditto
VI	New English Reader II	Third ditto
VII	Ditto III	Fourth ditto

The English copy-books to be used are—

Class.	Series.			
	Longmans, Green & Co.		Gulab Singh and Sons.	Blackie & Sons (Vere Foster's.)
	Upright.	Semi-upright.		
V	1, 2, 3	2, 3, 4	1, 2, 3, 4	1, 2
VI	4, 5	6	5, 6	3, 4
VII	6, 7, 8	7	7, 9, 10	5, 6

The books approved for translation exercises are—

(1) Translation Practice in two parts for Lower Middle Section, by B. D. Gordon; (2) Exercises in Translation from Urdu into English, by J. R. Cornah, published by Gulab Singh and Sons, Lahore.

The following books on English Grammar and Composition are recommended for use:—

(1) Primer of English Grammar, published by the Christian Literature Society for India, Madras.

(2) The Middle School English Grammar, Part I (Standard V), by L. Tipping, Macmillan & Co.

(3) The Suggestive Composition Book, Parts 2, 3 and 4 (Blackie & Sons).

(4) Lessons in English Composition, Book 1, by J. C. Nesfield, Macmillan & Co.

(5) Picture Composition, Pupils' Book, by J. N. Fraser (K. & J. Cooper, Bombay).

PHYSICAL EXERCISES.

Kempster and Kaye's Physical Drill, in Urdu or Hindi (Macmillan & Co.), as follows :—

Preparatory Class A.—Chapter I.—Exercises 1, 2, 5, and 6.
Chapter II.—Opening the ranks.
Salute and dismissal.

Preparatory Class B.— Ditto.

Class I.—Chapter I.—Exercises 1 to 9.
Chapter II.—Opening the ranks.
Chapter III.—Exercises 1 to 7.

Class II.— Ditto.

Class III.—Chapter I.—The whole.
Chapter II.—Opening the ranks.
Chapter III.—Exercises 1 to 11.
Races and jumps.

Class IV.— Ditto.

Class V.—Chapters I—III.—The whole.
Chapter IV.—The whole (optional).
Races, jumps, and tug-of-war.

Class VI.— Ditto.

Class VII.— Ditto.

APPENDIX III.

SCHEME OF OBJECT LESSONS.

Instructions to Teacher.

OBJECT LESSONS.

Aims.—The chief aims of these lessons are to train children to observe accurately and to quicken their interest in the world around them. In the preparatory stage these are the sole aims. In the higher classes the lessons will further be used to train children to reflect on the results of their observations and to reason about things; they will compare and contrast things. The lessons may be used for other purposes; they may add to the children's intelligent knowledge of common things, and be made the basis of instruction in language and drawing. While it is of importance to keep these additional aims in mind, we must regard them as of secondary importance; if we endeavour to impart to children information, however useful it may be, without making them handle and examine things for themselves, we shall fail to make our teaching the means of developing habits of observation, and the information imparted will be superficial and inaccurate.

Choice of objects.—Familiar objects, chosen from the locality in which the school lies are recommended. These are better than unfamiliar objects as a means of training children to use their eyes; we shall make them observant if we get them to see what they had failed to notice in obvious things. Thus, the majority of children regard all leaves as having the same shape and structure, until their attention is drawn in an observation lesson to differences. Further, objects which can be so easily procured that all children may bring a specimen to the class and examine it, will give more interest to the lessons than objects which can be shown from the teacher's desk or by pictures. A lesson on milk would therefore be a much wiser choice than a lesson on sodium, and a lesson on a parrot than one on a rhinoceros.

The objects should be chosen with reference to the season of the year and to the age of the pupils. Thus, lessons in which flowers are being examined should be taken in the months of March and April, when the children will have opportunities of examining many varieties; and while a lesson on germination would be suitable for Class IV, it would be too difficult for Class II.

In order to give opportunities for comparison, the objects chosen should have some connection with each other. In the lowest classes they will be linked together by dealing with similar groups of objects (e.g., common crops), between which the pupils may note comparison and contrast. In the higher classes there should be more continuity of subject; the series of lessons should give the children opportunities to make deductions, and should lead them to the statement of simple general truths such as "animal life is dependent on plant life." By association in this way the lessons will gain greatly in interest, and will admit of gradual progress in difficulty along particular lines.

The actual objects should, wherever possible, be obtained. Nearly all the lessons in the following lists can be illustrated by objects which the children can bring to school. If the teacher encourages his pupils to exert themselves in this way, he will help greatly to make his lessons a success. Pictures are a poor substitute for the real object and should be used in the place of objects only when lessons are given on certain animals which cannot be shown in the school, e.g., camel, elephant, but which may form the subject of a lesson if children are familiar with them.

It is not necessary to have many objects in a course. The teachers should not attempt to give lessons in all the objects mentioned in the following list; *he should make a selection.* Habits of observation are better cultivated by examining a few objects thoroughly than by cursorily looking at many.

Method of teaching.—The first necessity in an object lesson is an object to observe. It would not be necessary to say this, were it not a fact that many teachers are content with a picture, a model, or even a description from a book. A picture or model will help to make a description more vivid, but cannot take the place of the object itself.

The teacher should first find out from the class all they know about the object. He should then lead them to examine it more closely and notice things which formerly they had failed to observe. Finally, he should lead them to see how the object is adapted by its structure to its uses, ways of living, or mode of growth.

The most common fault of these lessons is that the children do nothing but listen. The teacher should guard against the temptation of imparting *much information* in one lesson, for children become tired and bewildered by many facts and descriptions. The information should only be such as the object itself gives; any further information may, if necessary, be given in other lessons. Thus a lesson on stamps may be an object lesson, but an account of the way in which letters are conveyed from one place to another should be left to the reading or composition lesson; while the growth of particular plants may be studied in the observation lesson, the distribution of crops in a particular part of the country should be taught in the geography lesson.

"One thing at a time" is a good rule. But while it is not desirable in one lesson to deal with several kinds of objects, there should always be several specimens of an object in the class and, if possible, each pupil should have a specimen before him.

Questions should be put at the beginning of a lesson to find out what the children already know about the object. In the course of the lesson questions should be put in order to stimulate the children to think and to look at things for themselves. At suitable stages or at the end of the lesson the teacher should question the class to find out what they have grasped. He should also at the end of suitable stages encourage the class to ask him questions.

The teacher's language should be simple and his own (i.e., not quoted from a text-book), and if he uses technical terms these should only be such as the boys are likely to use subsequently. The value of the lesson as a means of training pupils in the correct use of language in speaking and writing should not be overlooked. The pupils should therefore be encouraged to express the results of their observations by accurate description in speaking or writing, and while the teacher should not make his lesson one on grammar or composition, he should not allow careless expressions to pass uncorrected. In the preparatory classes the lessons should take the form of conversations between teacher and pupils. In classes I and II the children should be asked to write the name of the object and, where possible, to make drawings. In classes III and IV simple records should be made, and children should invariably be asked to make simple drawings. The records may at first be copies of the teacher's summaries on the blackboard, but these should be replaced as soon as possible by simple descriptions, written by the pupils in their own words.

More and more will be expected of pupils as they grow older. In the preparatory stage the sole aim of the lessons will be to awaken in children an interest in the things around them; the lessons must be short and bright, and questions will be put solely to make children examine things. In Classes I and II the objects chosen will be more difficult of analysis and will require more careful examination then those of the preparatory classes; pupils will be led to compare and contrast things, and will be questioned to make them think why the properties and structure of the object are specially adapted to its uses, ways of living or mode of growth. In classes III and IV there will be greater demand than in previous classes on the reasoning powers; things will be classified, deductions will be made, general truths will be arrived at and a training will be given in exact measurement.

Diagrams and drawings by the teacher on the blackboard are valuable as a means of giving interest to a lesson, but these should follow, not precede, the children's observations. the blackboard sketches should not be elaborate drawings. The fewer lines in them the better; each drawing should bring out only one or two points, for any elaboration will only distract the class.

When experiments are performed information should not be given as to what may be expected to happen; when the experiment has been carried out the children should be questioned and led to reason out for themselves what it teaches.

For successful teaching, the *teacher's interest* is the first essential. If instead of depending solely on books, he works at the objects himself saying: "How can I kindle the interest of children in these? How can I awaken their curiosity and stimulate them to observe and enquire?" his teaching will be successful.

Scheme of Object Lessons.

Teachers should *select* their lessons from the following lists:—They should choose from lists objects which are found in the district in which the school is situated, and are best suited to the ages of the children.

Preparatory Classes A and B.

Common things.—Simple forms: sphere, cube, cylinder—illustrated by balls, pieces of sugarcane, pencils, *pichkari* (syringe), *bansiri* (flute), bricks. Colours: the children should be taught to distinguish the colours—white, black, red, green, yellow, and blue. The following should be used as illustrations: Flowers, coloured paper, cloth, wool, beads, and *churies* (bangles).

Common animals and birds.—Cow, goat, sheep, cat, dog, parrot, pigeon, *titar*.

Common fruits.—Guava, mango, orange, tamarind, *ber*.

Common articles of food.—Milk, water, bread, *dal* (lentil), *ghee* (clarified butter), *dahi* (curds).

CLASS I.

Common things.—*Takhti*, slate, knife, *khurpa* (hoe), *pharua* (spade), *khapra* (tile), *ghara* (pitcher).

Common animals and birds.—Buffalo, horse, ass, camel, sparrow, *maina*.

Common crops.—Wheat, barley, gram, maize, rice, *bajra*, peas.

Common vegetables.—*Sag* (spinach), *bhindi* (lady's finger), *gajar* (carrot), *muli* (radish), potato, *kohra* (pumpkin).

CLASS II.

Common things.—Stamps, metals (iron, brass, copper), coins, clay, sand, sulphur, saw, *chheni* (chisel), *barmi* (borer), *hal* (plough), harrow, *kolhu* (sugar mill).

Common animals.—Elephant, monkey, fish, snake, squirrel, rabbit, frog (to be selected only if they are frequently seen in the locality, and if suitable pictures are available), peacock, crow, blue-jay.

Common trees and plants.—Mango, *pipal*, *nim*, tamarind, bamboo, cotton, castor plant.

CLASS III.

Serial number.	Subject.	Detailed syllabus.	Month of the year in which the subject is to be taught.
1	Classification of objects.	Living and non-living objects. Natural and artificial objects.	July.
2	Plants and their parts.	Examination of a number of the common flowering plants of the neighbourhood with reference to their flowers, leaves, stems, roots, fruits, and seeds, and also to the following :— (*a*) Flowers yield seeds and fade away. (*b*) The stem holds the leaves up to the sunlight and supports the flower. (*c*) The root fixes the plant in the soil.	July and August.
3	Flowers ...	Examination of some of the common flowers of the season with reference to the following parts :— petals, sepals, and stamens. The following are examples which may be studied :— *Khira* (cucumber), *bhindi* (lady's finger), *lauki* (gourd), jasmine, rose, *dhatura*, *gul hazara*.	August and September.
4	Fruits ...	Examination of some of the common fruits of the season with reference to differences in colour, smell, taste, shape, and size, and also to the fact that fruits contain seeds. The following fruits may be examined :— Custard-apple (*sharifa*), lemon, orange, cucumber.	September and October.
5	Leaves and their classification.	Classification of leaves of different plants ; leaves to be brought by pupils. (*a*) By shape— (i) long and narrow, e.g., grasses, specially the following :— *Kans*, *makka*, *sarkanda*, wheat, rice, barley. (ii) needle-shaped, e.g., *chir*. (iii) oval-shaped, e.g., *tidhara bargad*. (*b*) By structure— (i) simple (one blade, e.g., mango, *pipal*, *bargad*, mulberry, *kela*). (ii) compound (blades divided into separate leaflets, e.g., *arhar*, gram, *nim*, *shisham*). (*c*) By margin— (i) leaves with entire margins, e.g., mango, *bargad*, *mahua*, *gular*, bamboo, jack-fruit. (ii) leaves with toothed margins, e.g., mulberry, castor, rose.	November and December.

Serial number	Subject.	Detailed syllabus.	Month of the year in which the subject is to be taught.
		(*d*) By veining— (i) net-veined leaves, e.g., pipal, *bargad*, gourd, melon. (ii) parallel-veined leaves, e.g., sugarcane, bamboo, *haldi*.	
6	Flowers ...	Examination (resumed) of some of the common flowers of the winter season with reference to their petals, sepals, and stamens. The following may be studied:—Cotton, poppy, *bhanta*, mustard, *dhaniya*, peas.	January.
7	Trees ...	Identification of some of the common trees of the neighbourhood by their leaves of which drawings should be made by the pupils. The following are examples which may be studied:—*shisham*, *nim*, *mahua*, *sal*, mango, *pipal*, *bargad*, *katahal*, mulberry, bamboo, toddy-palm, date-palm.	January and February.
8	Fruits ...	Examination of some of the common fruits of the winter season, as in September and October. The following are examples which may be examined:—Guava, plum, *kamrak*, *anar*, *anjir*.	February.
9	Observation lessons.	Observation lessons on the following:—Cotton, jute, tobacco, wool, paper, and pencil.	March and April.

Class IV.

Serial number.	Subject.	Detailed syllabus.	Month of the year in which the subject is to be taught.
1	Needs of a plant.	Plants require (1) sunlight, (2) air, (3) water. Plants are living things.	July.
2	Flowers ...	Examination of some of the common flowers of the season with reference to their carpels, sepals, petals, and stamens. The following are examples which may be examined:— Rose and jasmine—to show petals. Rose and *dhatura*—to show sepals. *Dhatura* and *bhindi*—to show carpels.	August.
3	Examination and classification of plants used for food.	A simple classification of plants used as food by men or animals and an examination and comparison of these. The following are examples:— (*a*) Seeds used as food—*arhar*, *urd*, pea, gram, *mung*, bean.	September and October.

Serial number.	Subject.	Detailed syllabus.	Month of the year in which the subject is to be taught.
		(*b*) Fruits used as food—orange, lemon, peas, guava, mango, banana. (*c*) Roots used as food—turnip, carrot, radish, sweet potato. (*d*) Stems used as food—sugarcane, *ganthgobi.* (*e*) Leaves used as food—cabbage, *chana sāg, methi, sarson, marsa, palak.*	
4	Mensuration...	Yard measure	November.
		Examination of a yard measure and its divisions. How to measure to the nearest inch.	
		Class to guess length to nearest yard, e.g. length of class room, height of door, etc. These to be verified by measurements made by the class. Class also to guess lengths to the nearest foot, of smaller objects, e.g., width of table, etc., and the measurements to be verified by experiments.	
		Foot-rule.	
		Examination of a foot-rule (divided into eighths and tenths of an inch). To copy part of the rule and its divisions. How to measure to the nearest eighth or tenth of an inch.	December.
		Measurement of straight lines.	
		The blocks of wood of rectangular shape, rectangular pieces of cardboard, tin, etc., for measurement. Measure lengths of sides in inches and eighths of an inch and also in tenths of an inch, expressing the latter in the decimal notation.	January.
5	Flowers ...	Examination (resumed) of some of the common flowers of the winter season with reference to their nectaries as well as petals, sepals, stamens, and carpels (previously done).	February.
		The following are examples which may be studied :— Mango, mustard, and *dhaniya*—to show nectaries. Mustard and cotton—to show carpels. Mustard, peas, beans, and cotton—to show stamens Poppy and rose—to show sepals. Cotton and gourd—to show petals.	
6	Observation lessons.	Observation lessons on the following :— Wood, tobacco, and the common vegetable oils, e.g., mustard, linseed, cocoanut, and *sesamum.*	March and April.

Class V.

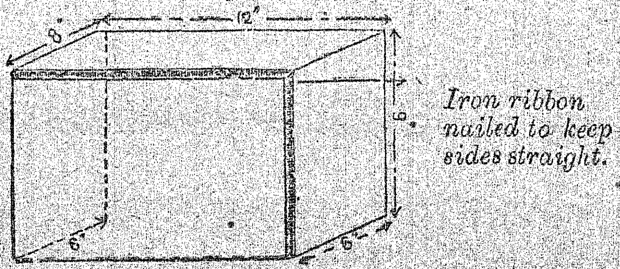
Serial number.	Subject.	Detailed syllabus.	Month of the year in which the subject is to be taught.
1	Seeds ...	Soak beans in water for a few hours and take off the skins. Note the white tip (future root) separate the fleshy parts; note the white stem lying between them.	July.
2	Germination	To grow and examine seed, e.g., beans, wheat, mustard, peas, onion, etc., and to make sketches showing the stages in growth of the seeds and also to examine the seedlings by pulling up a few at intervals of about two days.	July and August.
3	Chief things needed for germination.	(*a*) Supply of moisture. (*b*) Air (*c*) A certain degree of warmth. *Experiments for* (*a*) *and* (*b*). (1) Fill a bottle with dry seeds, put some elastic bands about it and place it under water: after a few days the bottle will be burst by the swelling seeds. (2) Place some dry seeds in dry sawdust and others in moist sawdust (an inch below the surface); compare the results after a week or two. (3) Take three small wide-mouthed bottles, two of which have good corks. Call these I, II, III. Dry I, place in it some seeds (mustard, wheat, barley), cork, and seal with sealing wax. In II put two or three layers of blotting-paper (wet) at the bottom; then put in seeds and cork, and seal as before. Treat III like II, but leave the bottle uncorked. Put the bottles side by side and examine daily. In I they do not germinate, no water and little air. In II they grow for a little while but then die. In III they grow well if the paper is kept moist. *Experiment for* (*c*). Take two small flower pots and fill them with moist sawdust or sand. Sow some barley or wheat seed in each. Place one pot in another earthen vessel in which water is kept for cooling, taking care that the water does not reach the pot containing the seeds. Keep the other pot near the first but without cold water round it. Note that the seeds germinate quicker in the second pot than in the first. The germination is delayed with decrease of warmth and stops if there is no warmth at all (*cf.* how "*doob*" grass grows in the rainy season with moisture and warmth; when the latter is withdrawn in the cold season, little growth, if any, is made till February, when "warming up" begins again).	August and September.

Serial number.	Subject.	Detailed syllabus.	Month of the year in which the subject is to be taught.
4	Roots attracted by water.	Fill a shallow box, having a bottom of coarse muslin, with a layer of sawdust. Plant mustard seeds. Tilt the box by a block of wood under one end. Keep the sawdust watered. Note that the roots pass out at the bottom but afterwards turn towards the moist sawdust. The same experiment may be tried with wheat and gourd.	October.
5	Mensuration...	Measurement of curved lines :—	
		Supply pupils with bamboo cylinders (made by cutting a long piece of bamboo into portions 2″ or 3″ long). Determine the circumference thus :—Wrap a piece of thin paper round the cylinder; stick a pin through the overlapping of parts of the paper and measure the distance between the pin-pricks ; or wrap thread round the cylinder four or five times and measure the length of the thread, dividing the length so obtained by the number of times it has been wrapped round.	October and November.
		Measure the perimeters of coins or other circular pieces of metal by making a mark on the rim and rolling the coin along the rule.	
		Outside measurements :—	
		Use a tape measure which may be made by the teacher, each boy being provided with a piece of string cut to length of the definite number of yards (e.g., four yards ; then the string folded in half equal two yards and folded again half equal one yard).	November and December.
		Distance to be measured and then stepped.	
		Boys to find the length of an average step.	
		Measurement of the dimensions of the school room or school garden. Exercises in estimating distances, and stepping to verify the guesses.	
		Plans of compound to be made (the measurements being made by the use of the strings and foot-rule).	
6	Flowers ...	Examination of some of the common flowers of the season with reference to their various parts (revision). Functions of the different parts of a flower. Polination and seed-productions, the primary function of the flower.	January and February.
		The relationship between insects and flowers ; note only certain kinds of insects visit flowers ; why insects come to flowers ; advantage to flowers of insect visits.	
7	Fruits and seeds.	Dispersal of fruits and seeds ; its reason. Seed-*dispersal* and advantage because it prevents overcrowding.	
		Dispersing agents. How dispersed :—	March and April.
		(a) Wind—	

Serial number.	Subject.	Detailed syllabus.	Month of the year in which the subject is to be taught.
		Seeds or *fruits* that are carried by the wind— (1) Parachute fruits, e.g., thistle-down, *kans, parwal, sarkanda.* (2) Winged seeds, e. g., *kaner.* (3) Parachute seeds, e. g., cotton, *simal madar.* (*b*) Animals— (1) Seeds enclosed in succulent fruits which are eaten by birds or animals ; the seeds are ejected, sometimes at long distances away, e g., *anar,* peas, guava, *jamun, gular, anjir.* (2) Seeds and fruits dispersed by attachment to animals :— (i) Fruits with hooks, e.g., *latzira, gukhru,* spear-moss, *kutta* grass. (ii) sticky seeds, e. g., cordia latifolia. (*c*) Explosive or ejective mechanism in the fruit itself. Seeds liberated by the bursting of fruits, e. g., *arhar,* castor, *gulmendi* oxalis. (d) Water, especially in the case of aquatic plants and also those which grow on the margins of streams.	

Equipment for object lessons.

It is suggested that schools in which object lessons are attempted should be supplied with flower pots, if possible one between every two children, and a sufficient quantity of sawdust so as to enable scholars to see root-development. Provided that money be available it would still be better to supply the schools with germinating boxes made as in the sketch below :—



These boxes are made open at the top with a pane of glass in front fitting into a groove and sloping inwards. By this means the development of roots is seen and can be measured : the difference in the branching of roots in the main groups illustrated by any grass (barley, wheat, maize, rice, oats etc.) and plants such as beans, peas, gourds, etc., can be made out. These boxes are a never-failing source of interest and a valuable adjunct in teaching.

N. A. RUST, M.A.,
Offg. Director of Public Instruction,
United Provinces.

ALLAHABAD:
The 7th December, 1921.

Alternative curriculum for girls in A.-V. schools who do not wish to read for the School Leaving Certificate or the Matriculation Examination, for 1922-23.

PREFATORY MEMORANDUM.

Head mistresses and managers of secondary English schools are permitted, with the approval of the Inspectress, and in conformity with the general principles that underlie the curriculum, to make modifications in the distribution of the work in any subject among the various classes. Permission is also given, with the approval of the Inspectress, to re-group scholars in classes above the primary stage for Arithmetic, Drawing, Classical Languages, and Domestic Science independently of the recognized classification.

Object Lessons have been prescribed as an optional subject from preparatory Class B upwards up to Class IV and Nature Study as an optional subject for Classes V and VI, but the subjects should not be introduced into any school without the permission of the Inspectress, who should satisfy herself that trained teachers are available and can be spared for teaching them. In no case should the work be entrusted to untrained teachers.

The teaching of English by the Direct Method should not be attempted except by specially trained teachers. Where such teachers are not available in sufficient numbers for all classes, a teacher or teachers, qualified to give such instruction, might be employed to supplement the ordinary class teaching by taking classes separately for an hour or so a week each.

MEMORANDUM ON HOME LESSONS.

(Issued under the authority of G. O. no. 790/*XV*-212, *dated the* 19*th August*, 1910, *Educational department.)*

FROM the frequent complaints received regarding the excessive amount of work set to scholars by teachers for preparation at home, there is reason to believe that the proper relation between work done out of school by the scholar and work done in the class room is not always perfectly understood. Investigation has disclosed much divergence of opinion as to the amount of home lessons that may be reasonably exacted from the pupil in the different stages of her school career, the kind of work most suitable for preparation out of school hours, and the proper distribution of the time available for home preparation among the different subjects of study. Enquiries concerning the prevalent practice yield the conclusion that the matter is left too much to the discretion of individual teachers. Sometimes the pupil is expected to prepare for every lesson in school, and sometimes the work set is wholly unsuitable in both quantity and quality for study at home. The matter clearly does not receive the attention it deserves, and since the abuse of the system of home lessons may produce permanent injury, both physical and mental, it is necessary that steps should be taken to protect scholars from it. It is desirable, therefore, without prescribing any rigid uniformity of system, to lay down certain general principles for the guidance of teachers.

(1) The fundamental principle on which home work rests is one which, it is to be feared, is too often forgotten, viz., that teaching and learning are two complementary processes, neither of which can be dispensed with or divorced from the other without detriment to educational progress. Activity on the part of the teacher must correspond to activity on the part of the learner. If either is absent, the process becomes one-sided and the result barren. Accordingly the teacher who confines herself to the "delivery" of lessons in school, with which home work is not at all or imperfectly correlated, will be little less deserving of condemnation than the teacher at the opposite pole, who neglects her class teaching and endeavours to make up for it by setting long tasks to be done at home.

(2) Though axiomatic, it is too often forgotten that home work must be adapted, both in quantity and quality, to the capacity and the age of the scholar. Home work should not exceed the quantity which a girl of average capacity can be expected to prepare without undue mental strain and without engrossing all her spare time. The clever girl will no doubt take rather less and the dull girl rather more than the approximate time for home preparation indicated below, for they have been estimated to suit the capacity of the scholar of average ability. The aim in setting home lessons should be that a girl should be able to prepare her tasks thoroughly, and yet have sufficient spare time to devote to healthy recreations, mental and physical, of her own choice :—

(a) In the Lower Primary and Preparatory Sections no home lessons should be set at all. If the school hours are properly utilized, there is ample time for the teacher to teach and for the scholar to learn and apply what she has been taught.

(b) In classes above the Lower Primary stage the approximate time to be devoted to home lessons should not exceed, in the Upper Primary Section, *one* hour, in the Lower Middle Section, *one and a half* hours, in the Upper Middle Section, *two* hours, and in the High Section from *two* to *three* hours.

(3) Home work should not be exacted from a scholar in too many subjects on the same day, nor too much in one subject. In this matter, the head mistress must exercise controlling authority over the class teachers. She should enquire from them from time to time what amount of work is set in the various subjects, and should see that too much time has not to be given to the study of one subject at the expense of another.

(4) Home work is one of the most important means whereby the student can be trained in the habit of doing things for herself. It must be something which she can accomplish on

the basis of what she has learnt in school, not something beyond her powers which necessitates recourse to the assistance of a private tutor. A girl who is always being helped in the preparation of her home work by a private tutor loses confidence in herself and the habit of doing things independently. Moreover, work which is the result of collaboration with a private tutor affords no criterion of the girl's capacity, progress or industry.

(5) Home work should be not only such as can be done without assistance, but such as implies effort. It should never be a merely mechanical exercise which involves no intellectual exertion. It should not, for example, consist of the transcription of "rough" work done in school. Under the influence of unsound tradition there has been, and still is, much waste of labour in this way. Such work is manual, not mental, and should be altogether unnecessary for girls who have been trained in habits of neatness and accuracy.

(6) In the lower stages it cannot be expected that girls should break much new ground for themselves. They should therefore be almost exclusively occupied in going over the ground already covered in class, and this work of assimilation should be tested by the teacher at the beginning of a fresh lesson. It may therefore be laid down as a general rule that written exercises upon matter not already taught in school should rarely be set in the Upper Primary Section. The work at home should take the form of recapitulating the work done in the day and of training the memory, which at this stage may be most usefully exercised. But since scholars cannot be expected to take much interest in what they find neglected by the teacher, written exercises should be punctually corrected and returned to them as soon as possible. It is most important that the work of this nature should never be allowed to fall into arrears. In the higher classes pupils will of course have to break ground for themselves, e.g., to solve "a deduction," to study the history or the literary text-book, for the next day's lesson.

(7) There is a tendency to relegate too much written work to out-of-school hours. It cannot be too strongly emphasized that the best means of training pupils to write clearly, to arrange their work neatly, and to take pains is to insist on these points in class note-books used in school under the eye of the master. There is plenty of time in school for written work of the nature of applying knowledge, if the teacher arranges her lessons properly. It may, in fact, be laid down as an almost invariable rule that no written work should be set as part of home lessons in the following subjects:—arithmetic, algebra, grammar, exercises, original composition, nor should work be set in copy-book writing, in drawing or in elaborate map-making. In the higher classes, where a greater variety of subjects is taught, and consequently time has to be economized, sketch maps and geometrical constructions may have to be done at home.

The abatement of the evil of excessive or unsuitable home lessons is a matter of such urgency and importance that, now that their attention has been directed to it, it is hoped that managers of schools and head mistresses will lose no time in making a searching enquiry into the practice prevailing in their own schools and take measures along the lines indicated above to prevent abuses in future. The responsibility for seeking that the nature and amount of home lessons set throughout the school are suited to the capacities of scholars is an important part of a head mistress's duties, and she should from time to time assure herself that the teachers are acting strictly in accordance with her instructions.

Alternative curriculum for girls in A.-V. schools who do not wish to read for the School Leaving Certificate or the Matriculation Examination for the session beginning in July, 1922.

SUBJECTS OF STUDY.

Preparatory Section.

A

1. Reading (Urdu or Hindi).
2. Writing („ „ „).
3. Arithmetic.
4. Sewing.
5. Drawing on blackboard (optional).
6. Brushwork („).
7. Clay-Modelling („).
8. Kindergarten Games („).

B

1. Reading (Urdu or Hindi).
2. Writing („ „ „).
3. Arithmetic.
4. Sewing.
5. Drawing on blackboard (optional).
6. Brushwork („).
7. Object Lessons („).
8. Clay-Modelling („).
9. Kindergarten Games („).

LOWER PRIMARY SECTION.

Class I.

1. Reading (Urdu or Hindi).
2. Writing („ „ „).
3. Arithmetic.
4. Sewing.
5. Drawing (optional).
6. Brushwork („).
7. Geography* („).
8. Object Lessons („).
9. Clay-Modelling („).
10. Calisthenics („).

Class II.

1. Reading. (Urdu or Hindi).
2. Writing („ „ „).
3. Arithmetic.
4. Sewing.
5. Simple practical directions in Hygiene.
6. Drawing (optional).
7. Brushwork („).
8. Geography* („).
9. Object Lessons („).
10. Clay-Modelling („).
11. Calisthenics („).

---

* To be introduced where the school wishes to do it and can make satisfactory arrangements for teaching it.

UPPER PRIMARY SECTION.

Class III.

1. English.
2. Vernacular (Urdu or Hindi).
3. Arithmetic.
4. Geography.
5. Sewing.
6. Simple practical directions in Hygiene.
7. Drawing (optional).
8. Brushwork („).
9. Object Lessons („).
10. Clay-Modelling („).
11. Calisthenics („).
12. Cooking („).

Class IV.

1. English.
2. Vernacular (Urdu or Hindi).
3. Arithmetic.
4. Geography.
5. Sewing.
6. Informal instruction in Hygiene.
7. Drawing (optional).
8. Brushwork („).
9. Object Lessons („).
10. Clay-Modelling („).
11. Calisthenics („).
12. Cooking („).

LOWER MIDDLE SECTION.

Classes V and VI.

1. English.
2. Vernacular (Urdu or Hindi).
3. Arithmetic.
4. Geography.
5. Domestic Science (Simple Physiology and Hygiene and Sewing).
6. One or two of the following alternative subjects :—
    - (i) History Stories.
    - (ii) Drawing.
    - (iii) Brushwork.
    - (iv) A classical language (Persian, Arabic or Sanskrit).
    - (v) Second Vernacular.
    - (vi) Nature Study.

NOTE.—No girl must take both Classical Language and Second Vernacular.

7. Cooking (optional).

UPPER MIDDLE SECTION.

Classes VII and VIII.

1. Arithmetic.
2. History and Geography.
3. Domestic Science (Simple Physiology and Hygiene and Sewing).
4. Two or three of the following alternative subjects :—
    - (i) English.
    - (ii) Vernacular (Urdu or Hindi).
    - (iii) A classical language (Persian, Arabic or Sanskrit).
    - (iv) Drawing.
    - (v) Algebra and Geometry.

NOTE.—Of the alternative subjects taken, one must be either English or Vernacular.

5. Cooking (optional).

HIGH SECTION.

Classes IX and X.

1. Arithmetic.
2. History and Geography.
3. Domestic Science (Physiology and Hygiene).
4. Sewing.
5. Two or three of the following alternative subjects :—
    - (i) English.
    - (ii) Vernacular (Urdu or Hindi).
    - (iii) A classical language (Persian, Arabic or Sanskrit).
    - (iv) Drawing.
    - (v) Algebra and Geometry.

NOTE.—Of the alternative subjects taken, one must be either English or Vernacular.

6. Cooking (optional).

ENGLISH.

AIMS IN THE TEACHING OF ENGLISH.

The aims in the teaching of English are—

A. Practical—To enable the pupil—

(1) to speak and read aloud English with correct pronunciation and some degree of facility;

(2) to understand the language when spoken ;

(3) to write the language with grammatical correctness and with facility.

B. Literary.—To enable the pupil to read intelligently for pleasure modern English prose and poetry of moderate difficulty.

SYLLABUS OF THE COURSES IN ENGLISH.

UPPER PRIMARY SECTION.

Class III.

Conversation and reading.—The early stages of instruction will be mainly oral, and should include systematic training in the sounds of spoken English, in connection with the pronunciation of easy words. By the end of the year the class should be able to carry on simple conversation about familiar objects and actions.

To read with correct pronunciation an easy primer; to render into the Vernacular easy sentences from the primer; to use the words of the primer in simple sentences and to answer in English simple questions based on the matter in the primer.

Spelling and writing.—To spell the words of the primer; copy-writing in ruled books of easy familiar words; writing in copy-books (in the latter half of the course), dictation in ruled books of words and sentences previously read in the primer.

Class IV.

Conversation and reading.—To converse about common objects and actions; to read with correct pronunciation from a reader; to render into Vernacular easy sentences from the reader; to use the words of the reader in simple sentences and to answer in English simple questions based on the matter in the reader.

Spelling and writing.—To spell the words of the reader; dictation in ruled books of words and sentences previously read in the reader; writing in copy-books.

Grammar.—To point out nouns, pronouns, and verbs.

LOWER MIDDLE SECTION.

Class V.

Conversation and reading.—To carry on simple conversation in English; to read with correct pronunciation from a reader; to render into the Vernacular passages from the reader; to use the words of the reader in simple sentences and to answer in English questions based on the matter in the reader.

Spelling and writing.—To spell the words of the reader; dictation in ruled books of words and sentences previously read in the reader; writing in copy-books.

Grammar.—To point out simple subject and predicate. Number and gender of nouns and pronouns, adverbs, prepositions, and conjunctions (without sub-classification). Interjections. The definite and indefinite articles. The conjugation of the three simple tenses. The verbs "to have" and "to be." Oral and written exercises in the above.

Written composition.—Written composition (at least once a week), e.g., of simple sentences, using words and phrases from the reader. Written translation from the Vernacular of easy English sentences.

Class VI.

Conversation, reading, and recitation.—To carry on simple conversation in English; to read with correct pronunciation from a reader; to render into the Vernacular passages from the reader; to use the words of the reader in simple sentences, and to answer in English questions based on the matter in the reader. To recite from memory passages chosen from the reader.

Spelling and writing.—To spell the words of the reader; dictation in ruled books of passages chosen from the reader; writing in copy-books.

Grammar.—Revision of previous work in grammar. Analysis of simple sentences (subject, enlargement of subject, predicate, simple predicate, object, direct object, indirect object).

Verbs, number and person, transitive and intransitive, weak and strong, conjugation of remaining tenses, active and passive voices. Oral and written exercises in the above.

Composition.—Written composition (at least once a week), e.g., using the words and phrases of the reader in simple sentences; reproduction of simple stories; practice in answering in writing easy questions on the subject-matter of the text. Written composition from the vernacular into English idiomatic sentences and continuous prose. In connection with the above, incidental instruction in elementary points of arrangement, construction, and punctuation.

UPPER MIDDLE SECTION.

Classes VII and VIII.

Literary course (at least four periods a week).—To carry on conversation in English; to read with correct pronunciation and expression; to render into the Vernacular passages from the prescribed text; to form sentences and to answer questions in English based on the vocabulary of the text; to recite from memory suitable passages of English poetry and prose to be selected by the head mistress).

Supplementary reading.—At least one easy book per session (for suitable books see lists of books recommended for supplementary reading issued by the Department).

Dictation and writing.—Dictation (at least once a week) of unseen passages of the standard indicated by the prescribed text. Writing in copy-books.

Grammar.—Classification of nouns, pronouns, adjectives, and adverbs. Nouns in opposition. Verbs. Auxiliary verbs. Complements of verbs. Clause analysis of complex and compound sentences. Elementary instruction in direct and indirect speech.

Written composition (at least once a week), including simple free composition, e.g., letter-writing and description and composition from the Vernacular into English idiomatic sentences and continuous prose. Incidental instruction in arrangement, construction, and punctuation.

HIGH SECTION.

Classes IX and X.

Literary course.—To carry on conversation in English; to read with correct pronunciation and expression and to render into the Vernacular passages from the books read; to form sentences and to answer questions in English based on vocabulary of the text; to recite from memory suitable passages of English poetry and prose (to be selected by the head mistress).

Supplementary reading.—At least two easy books per session (for suitable books see lists of books recommended for supplementary reading issued by the Department).

Grammar.—Revision of previous work. Verbs, moods, gerunds, and verbal nouns. Formal parsing. Further practice in analysis and in direct and indirect speech.

Dictation.—Dictation (at least once a week) of unseen passages of the standard indicated by the prescribed text.

TEXT-BOOKS

In classes III to VIII the following primers and readers are prescribed :—

Class.	Nelson's Readers.	Christian Literature Society's Readers.	Macmillan's Readers.	Tipping's Direct Method Books (Macmillan & Co.)	Longmans' Readers.	The new Method Indian Readers (Gulab Singh & Sons).
III	Primer	Primers nos. I and II. Indian Readers—	King Primer or Conversational Readers, First and Second Primers	First Direct Method English Reader.	Longmans' English Course for Indian Schools—1st year teachers' book. For teachers' use only.	
IV	Book I	Reader no. I	New English Reader I or Conversational Readers, I and II.	Second Direct Method English Reader.	1st year reading book.	Book I.
V	Book II	Reader no. II	New English Reader II.	Third Direct Method English Reader.	2nd year reading book.	Book II.
VI	Book III	Reader no. III, or Direct Method Series English Reader no. III.	New English Reader III.	Fourth Direct Method English Reader.	3rd year reading book.	Book III.
VII	..	..	New English Reader IV, and New English Reader IVB, or New English Reader IV and High School Reader II.	..	4th year reading book.	
VIII	..	..		..	Longmans' New English Course for Indian schools :— 5th reading book.	

In classes IX and X no text-book is prescribed, but at least two of the following should be read carefully :—

Golden Deeds—C. Yonge.
Kingsley's Heroes.
England—Peeps at Many Lands Series.
Wanderings of Rama—Gandy.

Ten poems should be selected for reading from the Indian Treasury of English Verse, Parts I and III. (Oxford University Press, Bombay.)

The English copy-books to be used are—

Class.	Series.			
	Longmans, Green & Co.		Gulab Singh & Sons.	Blackie & Sons (Vere Fosters).
	Upright.	Semi-upright.		
III and IV	1,2,3	2,3,4	1,2,3,4	1,2
V	4,5	6	5,6	3,4
VI	6,7,8	7	7,9,10	5,6
VII and VIII	10,11,12	8,10	12,13	7,8,9,10

The books approved for translation exercises are those by—

(1) Gordon; (2) Stapley; (3) Dwarka Prasad; (4) Manual of Translation into English for Hindustani Students, by E. S. Oakley; (5) Translation Practice in four Parts for Lower and Upper Middle Sections, by B. D. Gordon (for use of the Middle section); (6) Exercises in Translation from Urdu into English, by J. R. Cornah, published by Gulab Singh & Sons, Lahore.

The following books on English Grammar and Composition are recommended for use :—

(1) A Primer of English Grammar } Published by the Christian Literature Society
(2) A Manual of English Grammar } for India, Madras.

(3) The Middle School English Grammar, Parts I and II (Standards V and VI), by L. Tipping, *Macmillan & Co.*
(4) Longmans' Junior School Grammar for India, by D. Salmon and A. J. C. Oakley.
(5) A Simple Grammar of Modern English, *Longmans, Green & Co.*
(6) The Suggestive Composition Book, Parts 2, 3, and 4, *Blackie & Sons.*
(7) Lessons in English Composition, Books 1—3, by J. C. Nesfield, *Macmillan & Co.*
(8) A Junior Course of English Composition, *S. K. Nath & G. C. Nath, Calcutta.*
(9) Progressive Practice Book in "Direct" English Composition, Oral and Written, by P. Wren (*K. & J. Cooper, Bombay*).
(10) Picture Composition, Pupil's Book, by J. N. Traser (*K. & J. Cooper, Bombay*).
(11) Middle School Grammar, Parts I and II, by E. Tydeman. *Gulab Singh & Sons, Lahore* (for use in Classes V to VIII).
(12) An Easy Course of English Grammar and Composition, *K. & J. Cooper, Bombay* (for use in the High Section).

MATHEMATICS.

AIMS AND METHODS IN THE TEACHING OF MATHEMATICS.

Reasons for Teaching Mathematics.—We teach Mathematics with a two-fold aim. On the one hand we use the subject as a means of developing the intelligence of the pupil; on the other hand we endeavour to make her skilful in such operations with numbers as are likely to be of practical use. Thus the teacher will endeavour to make clear to pupils the reasons which underlie processes; and will also train them to gain the power of rapid, accurate, and confident calculation.

Neatness and arrangement in written work.—Great stress should be laid on neatness and care in arrangement. Errors in working can often be traced to slovenly arrangement or badly-formed figures. Pupils should be trained to arrange their work in a series of logical steps for each of which a reason can be given. Particular care should be taken in the early stages that units are not omitted, and that every line is a correct statement.

Oral work.—All new processes should be introduced and fixed in the mind by means of examples worked on the blackboard. These should involve only small numbers, so that calculations may be performed without resort to pen and paper. Even after a new rule has been established "Mental Arithmetic" should be a feature of most lessons. A few minutes given daily to the oral solution of problems is a valuable means of revising past works and in training pupils to gain rapidity and confidence in calculation. Up to class IV the teaching should be largely oral. In Geometry definitions must be first explained and understood and then *learnt by heart.*

Concrete illustrations.—Wherever possible, concrete aid should be used. In the earliest stages the various operations should be taught by means of illustrations with objects which can be easily procured, such as headless matches, nuts, etc. Tables of weights and measures should be visualized by measurements of lengths, areas, volumes, capacities, and weights; pupils should be practised in estimating the weights of common objects, the heights of tables and rooms, the areas of surfaces; the capacity of vessels and the distances between fixed points in the class-room and play-ground; and should verify their estimates by experiments. At a later stage in the teaching of vulgar fractions and decimals the foot-rule graduated in inches and twelfths of an inch and in centimeters should be in constant use.

Nature of examples.—Once a rule has been learnt it should be applied to varied examples, both oral and written. Examples should, as far as possible, relate to matters within the experience of pupils, and the numbers employed should be such as are likely to occur in practice; thus although pupils should be made familiar with operations in British money, prices in problems should, as a rule, be given in Indian money. Operations with large numbers should be the exception, and when they are employed they should be taken from real life. In multiplication and division of decimals the methods adopted in the early stages should be such as can be employed in contracted work at a later stage; thus the methods given in Hall, Stevens, and Sims' School Arithmetic for Indian Schools are preferable to the older methods. To test the grasp of a new process and to connect it with what has been already learnt, it should be applied to problems which involve also the application of previous rules; thus no preceding rule should be allowed to drop out of sight.

Revision.—In no subject is revision more necessary than in Mathematics. As the mental machinery of pupils becomes somewhat rusty from lying up for the vacation, such revision is especially necessary at the commencement of each session.

Text book.—Even the best text-book cannot take the place of the teacher. She has to expand the theory, which is usually a brief summary; she has also to provide the concrete illustrations to break down the artificial barriers which separate topic from topic and to supplement the lists of examples by supplying oral questions and by inventing problems which are likely to bring the subject into close touch with the interests of the pupils.

SYLLABUS OF THE COURSES IN MATHEMATICS.

ARITHMETIC.

PREPARATORY SECTION.

Class A.

Notation and numeration from 1 to 50 to be taught by means of concrete objects. Oral addition and subtraction of numbers whose sum does not exceed 20 in connection with concrete objects.

Class B.

Notation and numeration to 100 to be taught by means of concrete objects. Addition and subtraction of numbers whose sum does not exceed 100. Construction and memorising of tables 5×10. Simple oral problems on the above.

NOTE.—Problems should be introduced as soon as a new rule is begun.

LOWER PRIMARY SECTION.

Class I.

Revision. Notation and numeration to 1,000. Construction and memorising of tables 10×10. The four simple rules with no term or answer exceeding 1,000. Simple factors and multiplication and division by factors.

NOTE.—Short division should be taught before long division and should be used wherever possible.

Simple oral and written problems on the above.

Class II

Revision. Notation and numeration to crores. Construction and memorising of tables up to 16×12. The tables of Indian money and weights with exercises in reduction. The four compound rules with miscellaneous problems. (Terms with many digits must not be used.) Oral exercises on all the rules learnt.

UPPER PRIMARY SECTION.

Class III.

Revision. Tables of time and linear and square measures in common use with application to simple problems. Domestic accounts. Simple idea of vulgar fractions with denominators limited to 3, 4, 5, 6, 10, 12, 16. Oral and written problems on the above.

Class IV.

Revision of previous work. Vulgar fractions; all examples to be simple and to be limited to two or three terms only, with small numbers as numerator and denominator. L.C.M. to be taught as required for the addition and subtraction of fractions. Simple examples in unitary method.

LOWER MIDDLE SECTION.

Class V.

Revision of previous work. Tables of English money and problems involving its use. More advanced examples in unitary method. Vulgar fractions of concrete quantities. Simple interest.

Class VI.

Revision of previous work. Simple examples in square measure; simple examples in profit and loss solved by unitary method.

UPPER MIDDLE SECTION.

Classes VII and VIII.

Revision of previous work. Compound interest. Ratio and simple proportion. Decimal notation and metric measures. Use of Algebraic symbols to express rules.

HIGH SECTION.

Classes IX and X.

Addition, subtraction, multiplication, and division of decimal fractions. Percentages. Compound proportion.

ALGEBRA AND GEOMETRY.

UPPER MIDDLE AND HIGH SECTIONS.

Classes VII to X.

Algebra.—Classes VII and VIII.—Symbolic expressions; substitutions; brackets; addition; subtraction; easy multiplication; easy division.

Classes IX and X.—Simple equations; simultaneous equations involving one or two unknown quantities.

Geometry —Classes VII to X.—

Experimental.—Drawing and measurement of straight lines and angles; parallel straight lines; angles of a triangle; construction of triangles and parallelograms.

Practical—As in the text-book prescribed.

TEXT-BOOKS.

The books recommended for use are—

ARITHMETIC.

For class VII and upwards

(1) A School Arithmetic for Indian Schools, by Hall, Stevens, and Sims (*Macmillan & Co.*).

(2) Longmans' Senior Arithmetic [Indian edition, by Dexter, Garlick, and Pollard (*Longmans, Green & Co.*)].

(3) A New Arithmetic for Indian Schools by Workman and Sime (*Gulab Singh & Sons*).

(4) Senior Modern Arithmetic, revised by A. H. Mackenzie, Indian Press, Allahabad (Re. 1-8).

For classes below VII.

Classes I and II.—Girls' Lower Primary Arithmetic (Urdu or Hindi), Macmillian & Co., (Urdu, 11 annas; Hindi, 10 annas); or Girls' Primary Arithmetic, Book I (Urdu or Hindi), by K. C. Bhattacharya, Indian Press, Allahabad (12 annas each).

These arithmetics are recommended for use provisionally pending the publication of new arithmetics for girls' schools.

Classes III and IV.—Anglo-Vernacular School Arithmetic for classes III and IV (Urdu or Hindi), published by the Newal Kishore Press, Lucknow (Urdu, 10 annas and 9 pies; Hindi, 10 annas); or Modern Arithmetic, Book I (Urdu or Hindi), by A. H. Mackenzie, Indian Press, Allahabad (8 annas).

Classes V and VI.—Anglo-Vernacular School Arithmetic for classes V and VI (Urdu or Hindi), published by the Newal Kishore Press, Lucknow (Urdu, 11 annas; Hindi, 10 annas and 9 pies); or Modern Arithmetic, Book II (Urdu or Hindi), by A. H. Mackenzie, Indian Press, Allahabad (5 annas).

ALGEBRA.

Baker and Bourne's shorter Algebra (Bell & Sons); or Hall's School Algebra for Indian Schools, Part I (Macmillan & Co.); Hall's Algebra for Middle Schools in India, 1918 edition (for use in the Middle section) (Macmillan & Co.).

GEOMETRY.

Pierpoint's Elements of Geometry in Theory and Practice (The Indian Middle School edition), published by Longmans, Green & Co.

HISTORY.

AIMS AND METHODS IN TEACHING HISTORY.

Classes V and VI.—Whether the pupils have copies of the text-book or not is immaterial. If they have, the greatest care must be taken that the lesson does not develop into a reading lesson. Spontaneous narrative alone will secure the desired ends. As the story proceeds, the teacher should question the class to see whether they follow the course of events, and should encourage free communication of the feelings which the narrative produces in the minds of the pupils. The pupils may at intervals be required to write out a story, which they have heard, in their own words. No notes should be taken, for these will be memorised and reproduced. What is chiefly required of the teacher is a power of vivid narrative and of feeling the emotions which she strives to arouse. There should not be a written examination in these classes, but occasionally the head mistress or a senior teacher should test each class as a whole by an oral examination.

Classes VII and VIII.—However simple the book may be, there is an ever-present danger that the pupils will derive incorrect ideas from it. The lessons therefore should be read in class in sections of suitable length, the teacher confining her explanation of the text to making the meaning clear. After the reading she should, partly by narrative and partly by questions, build up a connected account of the events described. During this she should, as far as the means at her disposal allow, bring to the aid of the text pictures, sketch maps, time charts, reproductions of coins, and other historical objects. The aim at this stage is to connect the main facts as a whole and to develop a sense of time and of cause and effect. She should not fail to seize any chance of showing how one event was the natural outcome of others. The treatment should be largely biographical. New ground should as a rule be broken with the help of the teacher; the pupils however should independently learn at home what has been previously taught in class. It will be found useful to set the class questions to answer in writing at fairly frequent intervals. This makes for clarity of ideas and expressions.

Classes IX and X.—The treatment does not differ radically from that in classes VII and VIII, but the pupils should usually read each day's lesson before it is taken up in class. The teacher should emphasize the sequence of events. It is often found effective at this stage to follow a topical order in preference to a chronological one, as this consolidates and systematizes the pupil's knowledge better.

SYLLABUS OF THE COURSES IN HISTORY.

LOWER MIDDLE SECTION.

Classes V and VI.

Easy Stories from Indian History.

UPPER MIDDLE SECTION.

Class VII.

Outline of Indian History up to the end of the Moghul Empire.

Class VIII.

Outline of Indian History from the decline of the Moghul Empire to the present time.

HIGH SECTION.

Classes IX and X.

A fuller treatment of the courses for classes VII and VIII with an outline of the present system of administration.

TEXT BOOKS.

Classes V and VI.—Allen's Heroes of Indian History in Urdu (revised edition) or Hindi, *Longmans, Green & Co.*,

or

Marsden's Stories from Indian History in Urdu or Hindi, *Macmillan & Co.*

Classes VII and VIII.—Urdu History of India, Parts I and II, by E. Marsden and Jiya Ram, or Hindi History of India, Parts I and II, by E. Marsden and Sita Ram, *Macmillan & Co.*

Classes IX and X.—No text-book is prescribed. The books recommended for use are—

The Oxford Student's History of India, by Vincent A. Smith. *The Clarendon Press, Humphrey Milford, Oxford.* 5th edition. Revised and enlarged.

A History of India, by A. F. R. Hoernle and H. A. Stark, *Orissa Mission Press, Cuttack.*

A Narrative of Indian History for High Schools, by J. C. Allen, *Longmans, Green & Co., Bombay.*

India under Company and Crown, H. A. Stark, *Macmillan & Co.*

GEOGRAPHY.

AIMS AND METHODS IN TEACHING GEOGRAPHY.

Geography is on the one hand a study of the configuration of the earth—its continents, seas, mountains, forests, rivers, etc.; on the other hand it is a study of the needs of man and how he makes provision for these needs. Thus we only partly teach geography if we limit our teaching to a study of physical facts; the chief value of these facts is that they help us to understand how men live and work in different parts of the earth.

In studying a country consider it first as a whole—its general build, the long and short slopes of the land; the way in which rivers run; where there are large fertile tracts; where deserts and where forests. Then in more detail; the great mountain ranges, the chief river basins, the great plains, the climate, the population and occupations, the political divisions, the trade routes, and towns. For each of these topics a separate map should be drawn on the blackboard and by the pupils.

The teaching should not be confined to a mere list of names. Facts are of value only if brought into relation with other facts. The teacher should point out why here there is a forest, there a desert; how the nature of the coast has promoted intercourse with other countries; how mountains have prevented intercourse; how rivers have promoted trade and density of population; what natural resources have given rise to particular industries; how the climate has influenced the life and work of the people. Facts are needed and must be learnt; but a fact is remembered with greater ease if it is understood, and facts are of use only if we can connect them with causes and results.

In giving facts to the class something more than a bare recital is needed. No subject makes greater demands on the descriptive powers of the teacher. She should endeavour to carry the pupils in imagination to the country she is describing; to do this she should, as far as possible, supplement vivid description by pictures, photographs, picture postcards, and, if suitable arrangements can be made, lantern slides.

Sketch maps by pupils.—The pupil's note-book should contain a series of sketch maps for each country, each map illustrating a particular feature. Thus one map should contain the mountain system, a second map the river system, a third the distribution of rainfall, and so on. Almost every topic discussed can be illustrated by a sketch map and benefits thereby. In order to draw these sketch maps it is not necessary for pupils to learn to draw the outline by heart, except perhaps in the case of India, whose outline is easily remembered. The teacher should supply blank outline maps (cyclostyled or printed) and these should be used to illustrate various topics. Many maps, each illustrating a single feature, are preferable to one elaborate map crowded with details.

Blackboard map by the teacher.—These should be built up as the lesson proceeds; each map should contain the elements essential to the lesson and no others. Coloured chalks are a valuable help; they make the various features stand out clearly from one another, and if the same colour be used consistently to represent the same features, e.g., red for high land, blue for rivers, yellow for towns, etc., much time will be gained. Outline maps drawn on blackboard cloth are convenient as the basis for these maps; they may be procured from Messrs. G. Phillip & Son, through Messrs. Longmans, Green & Co., Bombay.

Wall maps.—The school should in addition possess for each continent (1) a photographed relief map, and (2) a plain orographical map, preferably without names. It is important that the map chosen should contain only essentials.

In addition to these printed maps, the teacher should make her own maps to illustrate special points, e.g., vegetation, density of population, rainfall, etc.

Atlases.—Each pupil should possess an atlas. The atlas should be brought regularly to the geography class, and should be constantly referred to during the course of the lesson.

Books and apparatus.—The teachers should consult the "Guide to Geographical Books and Appliances" published for the Geographical Association by G. Phillip and Son (Messrs. Longmans, Green & Co., Bombay).

SYLLABUS OF THE COURSES IN GEOGRAPHY.

LOWER PRIMARY SECTION.

Class I.

Story lessons describing the life of children in Arabia, Japan, Africa, and of the Esquimos.

NOTE.—The course should be introduced where the school wishes to do it and can make satisfactory arrangements for teaching it.

Class II.

Story lessons describing the life of children in England, Russia, Italy, Holland, and France.

NOTE.—The course should be introduced where the school wishes to do it and can make satisfactory arrangements for teaching it.

UPPER PRIMARY SECTION.

Class III.

General Geography.—Measurements of distances; direction, North, South, East, West, North-East, North-West, South-East, South-West; drawing of North and South line in play-ground by means of shadow cast by vertical stick; meaning of scale; plan of class-room, plan of school and play-ground, explanation of the map of the district, description of town or village in which the school is situated and of surrounding country.

Class IV.

General Geography.—Revision of the work of class III.

The Himalayas, the Deccan Plateau, the Eastern and Western Ghats, the coast strips and the towns, Calcutta, Madras, Bombay, Delhi, Allahabad, Lucknow, Cawnpore.

Description of Northern India with reference to the nature of the country and the climate.

The following maps to be drawn by the pupils :—

(1) Map of India, showing the Himalayas, the Sulaiman Mountains; the Vindhyas, the Indus with the five rivers of the Punjab, the Ganges with its main tributaries; the position of the United Provinces.

(2) Map of the United Provinces, showing divisions and their headquarters.

The World.—Shape of the Earth, its rotation, light and darkness, land and water, the names and relative position on the globe of continents.

NOTE—Where arrangements can be made oral lessons should be given in classes III and IV describing typical scenery or the life of man in various parts of the world. They should be illustrated by pictures, lantern slides, etc. In preparing these lessons the teachers should consult the following books :—World Pictures by J. B. Reynolds (Black), Man in Many Lands by Lyde (Black), and the Peeps at Many Lands Series (Black).

Physical Geography.—Explanation of the following terms by reference to the globe and map :—Continent, ocean, gulf, bay, lake, strait, cape, peninsula, isthmus, mountain, island. Description of the sea.

LOWER MIDDLE SECTION.

Class V.

General Geography.—Revision of previous work.

India.—Position, outline, nature of coast, important harbours and neighbouring islands, the chief physical features, climate, production, provinces, chief Native States, and chief towns.

The following maps should be drawn :—

(1) Outline map with main harbours and neighbouring islands.
(2) Ditto with chief mountains and rivers.
(3) Ditto with provinces and principal Native States.
(4) Ditto with chief towns.
(5) Complete map including all the above.

British Empire.—Position of the following:—British Isles, Canada, Australia, New Zealand, South Africa, with a very brief description of climate and nature of the country. As far as possible, lessons should be illustrated by pictures.

The World.—Where arrangements can be made, oral descriptive lessons on the lines prescribed for class IV.

Physical Geography.—Simple explanation of clouds and rain; the effect of mountains in producing rain; the monsoon; the formation of a delta.

Class VI.

General Geography.—Revision of previous work.

Asia.—Coast line, great mountain ranges, and table-lands, great plains, chief rivers, countries, neighbouring islands, chief towns, people, climate, products.

The World.—Where arrangements can be made, oral descriptive lessons on the lines prescribed for class IV.—

Physical Geography.—Surface of the earth, volcanoes, and earthquakes, the zones, poles, and equator.

UPPER MIDDLE SECTION.

Classes VII and VIII.

General Geography.—Revision of previous work.

Europe, America, and North Africa to be treated in the same way as Asia in Class VI.

Physical Geography.—Latitude and longitude. Simple explanation of changes of season, eclipses.

HIGH SECTION.

Classes IX and X.

Geography of World in Outline. Winds, tides, currents.

TEXT-BOOKS.

Geography.

These geographies are recommended for use provisionally, pending the preparation of new geographies for girls' schools.

Classes IV, V, and VI.—Anglo-Vernacular School Geography, Book I (Urdu or Hindi), published by Longmans, Green & Co. (Urdu, Rs. 2-4; Hindi, Re. 1-4);*

or

A Preliminary Geography of India and Asia with the British Empire in Outline, Book I (Urdu or Hindi), Indian Press, Allahabad (Re. 1.)

Classes VII and VIII.—Anglo-Vernacular School Geography, Book II (Urdu or Hindi), published by Longmans, Green & Co. (Urdu, Rs. 3; Hindi, Rs. 2/4);*

or

A Preliminary Geography of Europe, America, Africa, Australia, and New Zealand, Book II (Urdu or Hindi), Indian Press, Allahabad (Re. 1).

Classes IX and X.—McDougall's Earth Knowledge. Books III and IV (McDougall's Educational Co., 8, Farringdon Avenue, London).
Physical Geography by M. B. Hill (Indian Press, Allahabad).
Herbertson's Elementary Geography (Oxford University Press, Bombay).

Books recommended for teachers' reference for classes I and II are—

Little Folks in Many Lands (Blackie & Son, Bombay).
Each and All. Jane Andrews, Longmans, Green & Co., Bombay.
Seven Little Sisters. Ditto.
Little People in Far-Off Lands Series, F. Tapsell (Arnold & Son, Leeds).

VERNACULAR.

AIMS AND METHODS IN THE TEACHING OF VERNACULAR.

The aim of the study of the Vernacular is—

(1) to enable the pupils to understand and to appreciate Vernacular literature;
(2) to train them in clear and idiomatic expression.

Method of teaching—

The subject-matter of the lessons should from the first be made the basis of conversation in order that the pupils may grasp its meaning and take an intelligent interest in it. Difficult words and phrases should be explained with reference to their context, and not by substituting synonyms except in the cases where the latter are very familiar to the pupils. In reproducing a lesson the pupils should be trained to single out the salient facts or ideas, and should not merely give a running paraphrase of its entire contents.

The teaching of composition should begin with oral work in the lowest classes; by its means the children will learn to frame sentences, to use the new words and phrases learnt in their reading, and to give expression to their thoughts. When they have some mastery of writing and spelling, written composition should be given regularly; the subjects should be simple and familiar and the main aim of the work should be to train the pupils in clear and straightforward expression. Later, more advanced subjects should be given and more attention should be paid to literary form; abstract subjects should be avoided and in all cases the pupils should be thoroughly at home with the subject before attempting to write upon it.

---

* These geographies are available in parts also—
Book I, Part I (Urdu, 10 annas; Hindi, 8 annas).
Part II (Urdu, 10 annas; Hindi, 8 annas).
Part III (Urdu, 12 annas; Hindi, 8 annas).
Book II, Part I (Urdu, Re. 1-2; Hindi, Re. 1).
Part II (Urdu, Re. 1-4; Hindi, Re. 1-2).

Handwriting—

Takhtis should invariably be used in the preparatory section and class I. In class I writing on paper with reed pens may be begun, but practice in writing on *takhtis* should still be given periodically. Slates should never be used either for copies or dictation in any of the classes. Reed pens must be used for copy-writing and transcription, and ordinary English pens should never be used for Vernacular script. Great care should be taken from the very beginning that the pupils should acquire the right method of holding and turning their pens. The position in writing must be regarded as of great importance; *takhtis* should be supported on the knee and copy-books should be placed either on a *takhti* correctly held or on a desk.

SYLLABUS OF THE COURSES IN VERNACULAR (URDU OR HINDI).

PREPARATORY SECTION.

Class A.

Reading.—To read correctly words and easy sentences from a primer.

Writing.—To copy characters and easy words from a primer. Special *takhtis* with letters and figures in indelible ink are recommended for use.

Class B.

Reading.—To read sentences at sight from the text-book, to know the meanings of words and to answer questions on the subject-matter of the reader.

Writing.—To copy sentences from the text-book in Urdu or Nagri character. Special *takhtis* with letters and figures in indelible ink are recommended for use.

LOWER PRIMARY SECTION.

Class I.

Reading.—To read accurately at sight from the text-book; to explain the meanings of words and sentences; and to answer questions on the subject-matter of the reader.

Writing.—To write sentences to dictation from the text-book in Urdu or Nagri character. Copy-books to be shown.

Class II.

Reading.—To read correctly at sight from the text-book; to explain the mea[illegible] words and sentences; and to answer questions on the subject-matter of the reader. Recitation.

Writing.—To write sentences to dictation from the text-book in Urdu or Nagri character. Copy-books to be shown.

UPPER PRIMARY SECTION.

Class III.

Reading.—(*a*) To read at sight from the text-book; to explain the meanings of words and sentences; and to give the substance of the lesson in their own words. Recitation.

(*b*) Oral teaching of elementry Grammar in its practical application.

Writing.—To write passages to dictation from a book of equal difficulty with the text-book in Urdu or Nagri character. Copy-books to be shown.

Class IV.

Reading.—(*a*) To read at sight from the text-book and to explain words, allusions, and sentences. Recitation.

(*b*) *Grammar.*—Etymology.

Writing.—To write passages to dictation from a book of equal difficulty with the text-book or an original letter on some ordinary topic in Urdu or Nagri character. Copy-books to be shown.

LOWER MIDDLE SECTION.

Class V.

The literary reader prescribed. Composition of letters in current idiomatic style with the proper forms of courtesy.

Grammar.—Parts of speech and etymology of words.

Class VI.

The literary reader prescribed. Composition of letters in current idiomatic style, with the proper forms of courtesy.

Grammar.—Parts of speech and etymology of words. Analysis of simple sentences.

UPPER MIDDLE SECTION.

Classes VII and VIII.

The literary reader prescribed.

Grammar.—Etymology and Analysis.

Original letter-writing.

HIGH SECTION.

Classes IX and X.

The literary reader prescribed.

Grammar.—Etymology. Syntax.

Composition and letter-writing.

TEXT-BOOKS.

PRIMERS AND READERS.

PREPARATORY CLASS A.

Urdu.—Urdu Primer, by Khan Bahadur Mirza Habib Husain, or Urdu-ka-Naya Qaida (revised edition), published by the Indian Press, Allahabad.

Hindi.—Hindi Primer, published by the Indian Press, Allahabad, or Hindi Kindergarten Primer (revised edition), by Brijbasi Lal, or Illustrated Hindi Primer, by Girdhar Lal Pacholy, Shahpara, Aligarh, or Beacon Phonetic Chart (omitting pages 23, 24, and 25) with Phonogram Cards and Word Cards (Price Rs. 4), Methodist Publishing House, Lucknow.[*]

PREPARATORY CLASS B.

Urdu.—Urdu Reader for Preparatory Class B of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Hindi.—Hindi Reader for Preparatory Class B of Vernacular Schools, published by the Newal Kishore Press, Lucknow, or Beacon Primer[†], published by the Methodist Publishing House, Lucknow, (3 annas and 6 pies).

LOWER PRIMARY SECTION.

Class I.

Urdu.—First half of Lower Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Lower Primary Girls' Reader, Part I, published by the Newal Kishore Press,

Hindi.—First half of Lower Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Lower Primary Girls' Reader, Part I, published by the Newal Kishore Press, Lucknow.

Class II.

Urdu.—Second half of Lower Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Lower Primary Girls' Reader, Part II, published by the Newal Kishore Press, Lucknow.

Hindi.—Second half of Lower Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Lower Primary Girls' Reader, Part II, published by the Newal Kishore Press, Lucknow.

UPPER PRIMARY SECTION.

Class III.

Urdu.—First half of Upper Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Upper Primary Girls' Reader, Part I, published by the Newal Kishore Press, Lucknow.

Hindi.—First half of Upper Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Upper Primary Girls' Reader, Part I, published by the Newal Kishore Press, Lucknow.

Class IV.

Urdu.—Second half of Upper Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Upper Primary Girls' Reader, Part II, published by the Newal Kishore Press, Lucknow.

Hindi.—Second half of Upper Primary Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Upper Primary Girls' Reader, Part II, published by the Newal Kishore Press, Lucknow.

---

[*] This chart may be used in place of a primer in Class A, in schools where, in the opinion of the Inspectress, there are teachers competent to teach by the "Beacon method." Girls should not be required to buy the chart.

[†] This Primer is approved as an alternative text-book in Class B in schools where, in the opinion of the Inspectress, there are teachers competent to teach by the "Beacon method."

LOWER MIDDLE SECTION.

Class V.

Urdu.—First half of Lower Middle Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Middle Girls' Reader, Part I, published by the Newal Kishore Press, Lucknow.

Hindi.—First half of Lower Middle Girls' Reader, by M. B. Hill, Indian Press, Allahabad, or Middle Girls' Reader, Part I, published by the Newal Kishore Press, Lucknow.

COPY-BOOKS.

Urdu.—Urdu Khushkhati ka Naya Silsila (Urdu Copy-books), nos. I to IV (1918), published by Gulab Singh & Sons, Lahore (Price Re. 0-1-7, 0-1-7, 0-2-3, and 0-2-3), or Urdu Copy Mashq, nos. 1 to 4, by M. H. Jalal-ud-din Ahmad Jafri, Anwar Ahmadi Press, Allahabad, (Price Re. 0-2-0, 0-1-6, 0-1-3, and 0-1-3).

Hindi.—Hindi copy-books, nos. I to IV, published by the Indian Press, Allahabad.

CLASSICAL LANGUAGES.

SYLLABUS OF THE COURSES IN CLASSICAL LANGUAGES.

PERSIAN.

LOWER MIDDLE SECTION.

Classes V and VI.

Literary course.—The reader prescribed.

Grammar.—Verb with its conjugations and Asmai Musteqat.

UPPER PRIMARY SECTION.

Class III.

Sewing on buttons and tapes and loops; button-hole stitch; darning a hole; gathering and setting in; knitting (plain and purl); casting on and off with two needles.

Optional.—Chikan stitch; *sursiri;* crochet, feather-stitching.

Class IV.

Darning; patching; knitting on four needles (plain and purl); button-holes; practice of stitches previously learnt; to cut out and make up a simple garment, e.g., *kurta* or pinafore.

Optional.—Chikan stitches; *bakhya; hathkati;* crochet; satin stitch.

LOWER MIDDLE SECTION.

Classes V and VI.

Tucking and pleating; to cut out and make up any two of the following:—

Pyjama; kurta; shaluka; jacket (blouse) shirt; skirt; man's coat.

Optional.—Chikan-work; karchobi work; shadow work; waistcoat stitches; more advanced knitting.

UPPER MIDDLE SECTION.

Classes VII and VIII.

Two garments selected by the Manager to be cut out and made.

Optional.—Chikan work. Karchobi work. English embroidery. Drawn thread work. Crochet. Knitting.

HIGH SECTION.

Classes IX and X.

Two garments selected by the Manager to be cut out and made.

Optional.—Chikan-work. Karchobi work. English embroidery. Drawn thread work. Crochet. Knitting.

OBJECT LESSONS AND NATURE STUDY.

Courses to be proposed for the approval of the Inspectress of Girls' Schools.

CLAY-MODELLING AND CALISTHENICS.

Classes IX and X.—Readers—Mitralabha from Hitopadesha; and Nalopakhyana (Belvedere Press, Allahabad).

For supplementary reading.—Apte's Kusumamala, Part I (omitting Rat Bilap), published by Ramchandra Govind & Son, Bombay.

Composition.—Bhandarkar's First and Second Books of Sanskrit, or Trevedi's Sanskrit Teacher.

SECOND VERNACULAR.

SYLLABUS OF THE COURSE IN SECOND VERNACULAR.

Classes V and VI.

Literary course—As for the Lower Primary Section.

DRAWING AND BRUSHWORK.

AIMS AND METHOD IN TEACHING DRAWING.

Method.—Teachers of drawing should bear in mind that it is far more important to train the eye and develop the suppleness of the hand than to produce mechanically accurate copies of drawings. They should therefore see that pencils of suitable length are used and kept properly pointed. They should forbid the shifting and turning of the paper in the process of drawing and insist on the adaptation of the hand to the lines required. They must accept responsibility for seeing that scholars do a satisfactory amount of work, and while on the one hand hasty and untidy work is to be checked, on the other hand, anything of a laboriously minute and mechanical nature is to be avoided.

In model drawing the importance of rapidity as well as accuracy should be emphasized. The principles of perspective must be thoroughly explained and ample demonstration and personal correction must occupy each lesson. The surface on which the object stands should always be indicated, and the drawing should be made as large as the paper will allow.

It must be borne in mind that geometrical, perspective, and model-drawing—though related—are distinct exercises; while the former requires the application of geometrical knowledge, the latter fails in its object unless it strengthens the ability to draw simple objects freely, in good line, and correct relationship of position.

As regards geometrical drawing, neatness, absolute accuracy, and facility in using a few instruments are the ends to be kept in view.

All diagrams should be lettered and made of large size. Both ink and pencil should be used, alternately or in combination. Each problem must be carefully "taught" by the teacher and not merely copied by the girls on the larger scale from the text-book pages.

In Freehand and Model Drawing no mechanical aids should be allowed.

SYLLABUS OF THE COURSES IN DRAWING.

PREPARATORY SECTION.

Class A.

Drawing of straight lines, squares, and oblongs.

Class B.

Drawing of curved lines, circle, and figures like circles, bounded by curved lines (on slate). Drawing to be taught on the blackboard; no books to be prescribed.

Lower Primary Section.

Class I.

As in Macmillan's Official Drawing Book, no. 1, or as in Nelson's Graduated Drawing Book, no. 1, or as in Indian Drawing Books for Vernacular Schools, Book I, or as in Banbery's Scholars' Drawing Book, no. 1, in Urdu or Hindi, or as in Indian Drawing Copy-slips for Vernacular Schools, no. 3, published by the School Book and Apparatus Dépôt, Lucknow (slates to be used during the first half-year, then paper).

Class II.

As in Macmillan's Official Drawing Book, no. 2, or as in Nelson's Graduated Drawing Book, no. 2, or as in Indian Drawing Books for Vernacular Schools, Book II, or as in Banbery's Scholars' Drawing Book, no. 2, in Urdu or Hindi, or as in Indian Drawing Copy-slips for Vernacular Schools, no. 4, published by the School Book and Apparatus Dépôt, Lucknow.

Upper Primary Section.

Class III.

As in Macmillan's Official Drawing Book, no. 3, or as in Nelson's Graduated Drawing Book, no. 3, or as in Banbery's Scholars' Drawing Book, no. 3.

Class IV.

As in Macmillan's Official Drawing Book, no. 4, or as in Nelson's Graduated Drawing Book, no. 4, or as in Banbery's Scholars' Drawing Book, no. 4.

Lower Middle Section.

Class V.

As in Macmillan's Official Drawing Book, no. 5, or as in Nelson's Graduated Drawing Book, no. 5, or as in Banbery's Scholars' Drawing Book, no. 5.

Class VI.

Macmillan's Oriental School Drawing Book, Part I, or Nelson's Graduated Drawing Book, no. 6 or 7, or Banbery's Scholars' Drawing Book, no. 6.

Upper Middle Section.

Classes VII and VIII.

Free-hand Drawing.—Macmillan's Oriental School Drawing Books, Parts II, III, and IV (the designs in Part IV to be copied in outline only), or Nelson's Graduated Drawing Books, nos. 9 and 11.

High Section.

Classes IX and X.

Free-hand Drawing.—Light and shade, as in Macmillan's Official Drawing Books, nos. 9, 10, 14, 19, or any similar books, as also copying to an enlarged and reduced scale.

Geometrical Drawing.—As in Geometrical Drawing for Arts Students by I. H. Morris, specially edited for Indian students by William Jesse, pages 1 to 107 (omitting pages 68 to 71) and pages 117 to 120 (Longmans, Green & Co.).

Free hand Model Drawing.—Rectilineal and curved forms in outline, and in addition simple every-day objects, such as tables, trestles, *surahis*, etc., as also the following geometrical solids : cubes, prisms, pyramids, cylinders, cones, and spheres.

N.B.—Teachers of limited experience in the teaching of Drawing are recommended to use "Longmans' Complete Drawing Course, Part I," by I. H. Morris, Longmans, Green & Co. Teachers of Drawing in schools where Banbery's Scholars' Drawing Books are used are recommended to use "Teachers' Drawing Manual" in English, Urdu or Hindi, by H. Banbery, Indian Press, Allahabad.

SYLLABUS OF THE COURSES IN BRUSHWORK.

Preparatory Section.

Class A.

Free-arm drawing on the blackboard or on slates, of straight lines, squares, and oblongs, with coloured chalks—the squares and oblongs being filled up with a mass of colour on the same system as the brushwork.

Class B.

Free-arm drawing as in the preparatory section A, and free-arm drawing on the blackboard or on slates of curved lines, circles and figures like circles, bounded by curved lines with coloured chalks—all figures being filled up with a mass of colour on the same system as the brushwork.

LOWER PRIMARY SECTION.

Class I.

Some of the elements and their combination in brushwork which compose simple flowers and leaves—those known technically as blocks, lines, and spots.

Class II.

Further brushwork forms, lily-leaves, and thick curves.

UPPER PRIMARY SECTION.

Class III.

Petals, and right and left petal curves, with combinations of all the past work.

Class IV.

Various combinations of past forms, making leaves, etc., and well-known flowers.

LOWER MIDDLE SECTION.

Class V.

Brushwork of ordinary Indian flowers.

Class VI.

Further forms, insects, birds, flowers, etc.

Books for teachers' use.

The following are recommended for teachers' use :—

Longmans' Charts of Colour, Drawing and Design in three series by Cecil L. Burns, Principal, School of Art, Bombay, together with a Teachers' Handbook explaining the charts :—

Elementary series.—Ten sheets containing alternate lessons in colour and geometrical drawing.

Intermediate series.—Ten coloured copies of leaf-forms with a sheet of geometrical problems and exercises showing their connection with geometrical patterns.

Advanced series.—Ten large coloured freehand copies of flowers, animals, or other objects seen in nature, each accompanied by a design based upon a flower, illustrating the connection between nature and design.

DOMESTIC SCIENCE.

Hygiene.

AIMS AND METHODS IN THE TEACHING OF HYGIENE.

The aim in teaching hygiene is a practical one, i.e., to enable the girls to live healthy lives and to secure healthy conditions in their homes.

The formation of good habits while young is the only certain means of securing these ends, and teachers should use all means in their power to train children from the lowest class upwards in habits of cleanliness and order ; the theoretical instruction that comes later should show them the reason for habits they have already formed and give principles for regulating their future lives.

In the lessons in home nursing and first aid the pupils should be given regular practice in carrying out the instructions given in them; e.g., they should have practice in applying bandages, making beds for invalids, etc. They should not be brought into contact with actual illness, but for the purpose of practice one of the members of the class can act the part of the invalid.

SYLLABUS OF THE COURSES IN PHYSIOLOGY AND HYGIENE.

LOWER AND UPPER PRIMARY SECTIONS.

Classes II and III.

Practical training in the care of house and class room and in habits of personal tidiness and cleanliness.

Class IV.

Informal instruction on cleanliness of air, water, milk, food, clothing, person.

Practical work.—Plant experiments to show need of air and light. Care of sick-rooms. Boiling of milk and water, burning of rubbish, etc. Making of beds, soaking bandages and changing them, etc. Use of boracic solution.

LOWER MIDDLE SECTION.

Classes V and VI.

Simple Physiology.—Hygiene of air, water, food, sleep, exercises. Hygiene of the person. Treatment of common accidents (burning, cuts, etc.). Precautions against common illness (fever and use of quinine, small-pox, and vaccination, care of small children). Clothing, food, sleep, cleanliness.

UPPER MIDDLE SECTION.

Classes VII and VIII.

Further treatment of hygiene as above.

Nursing.

Simple first-aid.

Dangers from abuse of drugs and alcohol.

HIGH SECTION.

Classes IX and X.

Care of small children; their training in habits of obedience, truthfulness, and self-control.

Simple methods of teaching elements of reading, writing, and arithmetic and practical application of these.

TEXT-BOOKS.

Classes V and VI.

Shahrah Tandurusti, Urdu or Hindi, published by Gulab Singh & Sons, Lahore.

Classes VII and VIII.

Personal and Domestic Hygiene, by Mrs. Hendly, English, Urdu or Hindi edition, published by Gulab Singh & Sons, Lahore.

COOKING.

Classes III to X.

Courses to be proposed for the approval of the Inspectress of Girls' Schools.

SEWING.

AIM AND METHODS IN THE TEACHING OF SEWING.

In teaching sewing the aim should be to train the pupil to do neat and careful work and to finish it well.

The younger children should be supplied with coarse soft material and with large needles; fine stitching should not be required from them, as it is injurious to their eyes.

In teaching cutting out garments should be selected such as will be worn by the pupils themselves, and whatever style is adopted they should study carefully the proper proportioning of the different parts of the garment made in order to ensure its comfort and durability. Opportunities should be made to train the pupils' taste in the choice of style, colour, and material.

SYLLABUS OF THE COURSES IN SEWING.

PREPARATORY SECTION.

Class A.

Threading a needle; making knots; use of thimble; tacking and running.

Class B.

Running; running double seams; placing; twisting threads; back-stitching.

LOWER PRIMARY SECTION.

Class I.

Practice in running and back stitching; top-sewing; hemming.

Optional.—Chikan stitch; *kachcha phanda*; *ulti bakhya* (stem-stitch).

Class II.

Hemming, run and fell; knitting with two needles (plain) darning stitch on untorn material.

Optional.—Chikan stitch; *pakka phanda*; hem stitching; crochet (chain stitch).

UPPER PRIMARY SECTION.

Class III.

Sewing on buttons and tapes and loops; button-hole stitch; darning a hole; gathering and setting in; knitting (plain and purl); casting on and off with two needles.

Optional.—Chikan stitch; *sursiri;* crochet. feather-stitching.

Class IV.

Darning; patching; knitting on four needles (plain and purl); button-holes; practice of stitches previously learnt; to cut out and make up a simple garment, e.g., *kurta* or pinafore.

Optional.—Chikan stitches; *bakhya; hathkati;* crochet; satin stitch.

LOWER MIDDLE SECTION.

Classes V and VI.

Tucking and pleating; to cut out and make up any two of the following:—

Pyjama; kurta; shaluka; jacket (blouse) shirt; skirt; man's coat.

Optional.—Chikan-work; karchobi work; shadow work; waistcoat stitches; more advanced knitting.

UPPER MIDDLE SECTION.

Classes VII and VIII.

Two garments selected by the Manager to be cut out and made.

Optional.—Chikan work. Karchobi work. English embroidery. Drawn thread work. Crochet. Knitting.

HIGH SECTION.

Classes IX and X.

Two garments selected by the Manager to be cut out and made.

Optional.—Chikan-work. Karchobi work. English embroidery. Drawn thread work. Crochet. Knitting.

OBJECT LESSONS AND NATURE STUDY.

Courses to be proposed for the approval of the Inspectress of Girls' Schools.

CLAY-MODELLING AND CALISTHENICS.

Courses to be proposed for the approval of the Inspectress of Girls' Schools.

ORDER NO. V.E.233/XXXVII-1 (77).

Dated Allahabad, the 22nd December, 1921.

Privilege leave to M. Irfan Husain Alvi, Sub-Deputy Inspector of Schools, Basti, from the 4th to the 30th November, 1921.

ORDER NO. 438/XXIII—8.

Dated Allahabad, the 24th December, 1921.

With effect from the date he takes charge, Babu Prem Narayan Sinha to officiate as Assistant Master, Government High School, Rae Bareli, on Rs. 50 per mensem, *vice* Pandit Shankar Dayal Misra, transferred to the Jubilee High School, Lucknow.

ORDER NO. 439/XXIII—431.

Dated Allahabad, the 24th December, 1921.

With effect from the date he takes charge, Babu Asharfi Lal, B.A., O.T., Assistant Master, Government High School, Bareilly, to officiate as Head Master, Government High School, Pilibhit, in the Subordinate Educational Service in the Rs. 220 grade, *vice* Babu Madho Prasad Seth, deceased.

ORDER NO. 440/XXII—5(11).

Dated Allahabad, the 24th December, 1921.

In this office order no. 295/XXII—5(11), dated the 7th September, 1921, *for* "privilege leave" *read* "commuted furlough on full average salary."

Babu Ragunath Sahai, B.A., L.T., Head Master, Government High School, Hamirpur, furlough on full average salary for five months, with effect from 19th November, 1921, in extension of that granted him in this office order no. 295/XXII—5(11), dated the 7th September, 1921.

ORDER NO. 441/XXII—5(79).

Dated Allahabad the 24th December, 1921.

Pandit Lakshmi Narayan, Head Teacher, Reformatory School, Chunar, privilege leave for fifteen days, with effect from 1st December, 1921, or subsequent date.

ORDER NO. V/236/XXXVII—1(62).

Dated Allahabad, the 20th December, 1921.

Privilege leave to Babu Mangal Sen Jain, B.A., Deputy Inspector of Schools, Etah, for one month, with effect from 4th October, 1921 or subsequent date.

With effect from the date he took charge, S. Aizaz Husain, Sub-deputy Inspector of Schools, to officiate as Deputy Inspector of Schools, Etah, *vice* Babu Mangal Sen Jain, on leave.

With effect from the date he took charge, M. Sarfaroz Uddin, Head Master, Town School, Aliganj, to officiate as Sub-deputy Inspector of Schools, Etah, *vice* S. Aizaz Husain.

ORDER NO. 443/XXII—5(51).

Dated Allahabad, the 26th December, 1921.

With effect from 16th November, 1921, Pandit Damodar Dat Tripathi, B.A., C.T., Assistant Master, Government High School, Ballia, to officiate as Head Master of the same school, in the Subordinate Educational Service, *vice* Munshi Wali Ahmad, reverted.

ORDER NO. 444/XXII—5(57).

Dated Allahabad, the 27th December, 1921.

Babu Digambar Biswas, B.A., C.T., Head Master, Government High School, Partabgarh, commuted furlough for six weeks, with effect from the 20th December, 1921, in extension of that granted him in this office order no. 336/XXII—5(57), dated the 12th October, 1921.

ORDER NO. 445/XXII—5-(13).

Dated Allahabad, the 27th December, 1921.

In supersession of this office order no. 20/XXII—5(13), dated the 21st April, 1921, Babu Raghunandan Saran, C.T., Assistant Master, Government High School, Gonda, commuted furlough for one month and 12 days, with effect from 1st April, 1921.

ORDER NO. 446/XXII—5(67).

Dated Allahabad, the 27th December, 1921.

Babu Chand Bihari Lal, B.A., L.T., Assistant Master, Government High School, Amroha, in the Rs. 100—10—300 grade, officiated as Head Master in the same school, in the Rs. 220 grade, in the Subordinate Educational Service, from 4th October to 5th November, 1921, *vice* Maulvi Saiyid Abid Ali.

PROMOTION.

ORDER NO. V.E/234/XXXVII—12(104).

Dated Allahabad, the 24th December, 1921.

The following Teachers of the Model Schools attached to the Government Normal Schools for boys are promoted to the grades noted against their names, with effect from the 1st December, 1921 :—

1. Pandit Johri Lal, Assistant Teacher, Model School, Agra, from Rs. 35 to the Rs. 40 grade.
2. Pandit Deoki Nandan, Assistant Master, Model School, Agra, from Rs. 25 to the Rs. 35 grade.

ORDER NO. V.E/235/XXXVII—12(102).

Dated Allahabad, the 26th December, 1921.

With effect from 15th November, 1921, Pandit Ram Lagan, Assistant Master, Model School, attached to the Boys' Normal School, Gorakhpur, is promoted to the Rs. 35 grade, *vice* Pandit Shiva Datt Joshi, resigned.

RESIGNATIONS.

ORDER NO. 437/XXIII—81(8).

Dated Allahabad, the 23rd December, 1921.

The resignation tendered by Babu Rameshwar Sahai Sinha of his appointment as Assistant Master, Jubilee High School, Lucknow, is hereby accepted, with effect from the 9th December, 1921.

ORDER NO. 442/XXIII—81(11).

Dated Allahabad, the 28th December, 1921.

The resignation tendered by Babu Tansukh Rai Bhal, C.T., of his appointment as Assistant Master, Government High School, Bijnor, is hereby accepted.

A. H. MACKENZIE, M.A., B.SC.,

Offg. Director of Public Instruction,
United Provinces.

OFFICE OF DIRECTOR OF PUBLIC INSTRUCTION, UNITED PROVINCES.

CURRICULUM FOR THE VERNACULAR TEACHERS' CERTIFICATE EXAMINATION OF 1924.

I.—FIRST LANGUAGE.

(a) Urdu students—

(1) Tuzuk-i-Urdu (smaller edition—price Re. 0-9-6), by Khan Saheb Muhammad Ismail, Newal Kishore Press, Lucknow.

(2) Khayalat-i-Nadira, by Rai Bahadur Bishambhar Nath, Indian Press, Allahabad.

(3) Risala-i-Qawaid-i-Urdu, Part II, published by the Mission Press, Allahabad.

(b) Hindi students—

(1) Uttar Ram Charitra by Sita Ram.

(2) Tulsi Das Ramayan, Ayodhya Kand, edited by Ram Ratan Sharma and Chandra Hansa Sharma, published by the Ratna Ashram, Agra (12 annas).

(3) Satya Harish Chandra by Bharatendu Harish Chandra, published by the Nagari Pracharini Sabha, Benares.

(4) Hindi Middle Vyakaran, Newal Kishore Press, Lucknow.

II.—SECOND LANGUAGE.

(a) Urdu students—

(1) Tulsi Das Ramayan, Ayodhya Kand (up to doha 155), edited by Ram Ratan Sharma and Chandra Hansa Sharma, published by the Ratna Ashram, Agra (12 annas).

(2) Hindi Gadya Padya Sangrah, by Chaturvedi Dwarka Prasad Sharma, published by the Newal Kishore Press, Lucknow, omitting the following selections:—

Prose.—Raja Bhoj ka Supna; Mudra Rakshas; Dadaji Kaurdeva ka Shivaji ko Updesh; Ashcharya Vrittanta; Yunani Rajdut aur Vaishnava Dharma; Pandit Lallu Lal Kavi; Vir Balaka Abhimanyu; Bharata.

Poetry.—Ram Bangaman; Uttar Kand se Updesh; Ganga Gaurava; Kashi Varnana; Shekh Sadi ki Uktiyan; Draupadi Vachana Banavali; Jaya Ram Chandra; Ram Bharosa; Partap Bisarjan; Savitri Prabodhan; Pitri Viyoga; Kahawaton par Kundaliyan; Hanuman ji ka Ravana ko Updesh; Shri Raghavendra Stava.

(3) Hindi Middle Vyakaran, Newal Kishore Press, Lucknow.

(b) Hindi students—

(1) Adib-i-Urdu, by Khan Saheb Muhammad Ismail, published by the Newal Kishore Press, Lucknow, omitting the following selections:—

Qasaid, by Zafar Ali Khan; Qasaid, by Nazir Ahmad; Qasaid bataqrib Jalsa-i-Madarsa-i-Tibbiya-Delhi; Tehniyat Jashn-i-Jubilee by Nazir Ahmad; Shahr-i-Ashob, by Dagh.

(2) Urdu Reader, No. V, by Khan Saheb Muhammad Ismail, Newal Kishore Press, Lucknow.

(3). Risala-i-Qawaid-Urdu, Part II, published by the Mission Press, Allahabad.

NOTE.—The students of the Normal School at Almora are allowed to take Sanskrit in place of Second Language.

The course in Sanskrit is as follows:—

(a) Sanskrit Text and Grammar.—Sanskrit Reader and Grammar, Parts I—III, Indian Press, Allahabad.

NOTE.—The footnotes given at the end of each lesson should be attended to with special care.

(b Translation from Sanskrit into Hindi and vice versa.—"Sanskrit Vyakaran ki Pratham Pustak or the First Sanskrit Reader", by Dr. Bhandarkar is recommended for use.

III.—Elementary Mathematics.

(1) *Arithmetic.*—The following with reference to the methods of teaching the same:—Numeration and Notation. The four simple rules. The four compound rules and reductions in Indian money and weights in common use in the United Provinces. The four compound rules and reduction in British money. H. C. F. by factors. L. C. M. The four compound rules and reductions in British weights and measures of length, time and capacity in common use; instruction to be as realistic as possible.

The four simple rules in vulgar fractions. Vulgar fractions of concrete quantities. Practice. Account-keeping (*roznamcha* and *khata*). The four simple rules with decimal fractions. Conversion of vulgar fractions into decimal fractions to a given number of places, and *vice versa* (excluding recurring decimals). Decimal fractions of concrete quantities. Percentages. The unitary method. Simple Interest. Area of a rectangle and volume of a rectangular solid. Square root. Compound Interest. Simple and Compound proportion. Proportional parts. Profit and Loss. The solution of the simple equation and the use of symbols in the solution of questions in Arithmetic.

(2) *Algebra.*—As far as the solution of simple equations in one unknown quantity.

(3) *Geometry.*—Pierpoint's "Elements of Geometry in Theory and Practice", in Urdu or Hindi, Parts I, II and III (Pupil's edition), published by the Indian Press, Allahabad.

IV.—History and Geography.

(*a*) *History.*—History of India to be taught with special reference to teaching the subject in vernacular schools.

Text-books...
(1) History of India, Parts I and II, in Urdu, by E. Marsden and Jia Ram, published by Macmillan & Co.
(2) History of India, Parts I and II, in Hindi, by E. Marsden and Sita Ram, published by Macmillan & Co.

(*b*) *Geography.*—(1) *General.*—Outline of the Geography of the World, with Asia and India in more detail. (To be taught with special reference to teaching the subject in vernacular schools.)

(2) *Physical.*—The course prescribed for vernacular middle schools with special reference to the teaching of the same.

V.—Drawing.

As in the Syllabus given below:—

STAGE I.—Simple curved line objects—
A.—The circle ... Turned objects having a circular outline, as a plate, coin, hoop, wheel, clock-face, sun, moon, etc.
B.—Modifications of the circle. Orange, apple, *ghara*, football, pomegranate.

STAGE II.—
A.—The ellipse ... Circular objects seen in perspective become ellipses, plate, coin, hoop, clock-face, rim of a vessel, etc. Also felt-cap, spectacle glass, etc.
B.—Modifications of the ellipse. Egg, guava, brinjal, *papita*, jackfruit, gourd, cocoanut, pear, etc.

STAGE III.—Simple straight line objects—
A.—Right-angled ... Envelope, table-top, door, window, box-top, blackboard, etc.
B.—Modifications ... Flag, *takhti*, T-square, map, etc.
C.—Perspective ... Any of the above classes of objects seen in perspective.

STAGE IV.—Curves and straight lines—
A.—Combined ... Kite, spoon, bow, dumb-bell, Indian club, spectacles, tennis racket, wheel, etc.
B.—As seen in perspective—Thimble, tumbler, bottle, *balti*, drum, etc.

STAGE V.—

A.—Drawings of leaves in outline as type shapes.	As set out in section 5 of the scheme of Object Lessons for class III of Vernacular Schools.
B.—Drawing above in perspective.	Care is to be taken to see that all leaves are copied when in positions similar to those in which they grow. Simple leaves should be drawn first, then those more complicated in form.

Book of reference ...*Art Drawing for Indian Schools.* By J. Y. Buchanan (Macmillan).

NOTE.—The method to be adopted in teaching the subject is given in the Appendix.

VI.—SCHOOL MANAGEMENT.

(*a*) *Methods of Teaching, and School and Class Management.*

(1) *Methods of Teaching.*—The methods of teaching the following subjects in vernacular schools :—

Language (reading, spelling, writing, grammar and composition); History; Geography; Arithmetic; Geometry; Object Lessons; Drawing; Physical Exercises.

(2) *School and Class Management.*—Preparation of time-tables; home-work; discipline; qualities of good teaching; notes of lessons, questions and answers.

Text-book.—Richey's Manual of Teaching in Urdu or Hindi. (Macmillan & Co.)

(*b*) *Physiology and Hygiene.*

(1) *Physiology.*—Brief description of the human skeleton and muscular system; the circulation of the blood; brief description of the nervous system; the digestive organs; the organs and mechanism of respiration; the structure of the eye and ear.

(2) *Hygiene.*—Lighting and ventilation of the class-room; physical exercises; eye-sight and hearing; causes of mental fatigue; common infectious diseases, their signs and preventions; simple casualties; water, air and food with reference to their purity.

NOTE.—Pending the preparation of a book on the subject "Aiza-o-Sehat-i-Insani" or "Manushi Anga tatha Swastha" by K. C Bhattacharya, published by the Indian Press, Allahabad, is recommended for use.

(*c*) *The Vernacular School Manual.*

NOTE.—Pending the preparation of the book necessary rules to be taught from the Educational Code and the District Board Rules pertaining to education.

VII—OBJECT LESSONS.

Object Lessons.—Revision of the course prescribed for vernacular schools, with such additional instruction in the subject matter as is required for intelligent teaching.

VIII.—PHYSICAL EXERCISES.

Urdu or Hindi version of "Physical Training", by Kempster and Kaye (Macmillan & Co).

ALLAHABAD:
The 22nd December, 1921.

A. H. MACKENZIE, M.A., B.SC.,
Offg. Director of Public Instruction,
United Provinces.

APPENDIX.

NORMAL SCHOOL COURSE IN DRAWING.

Method.

The examination test is drawing on the blackboard only, but to enable students to pass this test they should be trained in the principles of object drawing by means of work on paper and subsequently apply these principles to instruction of a class from the blackboard.

As it is a teacher's course, the method to be adopted should be that of drawing on the blackboard to a large scale, i.e., 3 feet in each direction, as being a convenient stretch for the arm, and the drawing being then within the compass of the eye as seen by the teacher and yet large enough to be seen by the pupil at a distance of 20 feet.

The drawings should be executed in as free a manner as possible, the arm being straight but flexible and the teacher standing not less than two feet from the blackboard.

The principal aim of the drawing to be taught later is to furnish an illustrated class record of the study of the character, etc., of the things seen by the scholars in their object lessons. Thus it is necessary that the drawing should also be done in books so as to be available for future reference.

These drawings should be free in character and, when possible, should be of the same size as the original; but if this is not possible, the scale of the enlargement or reduction should be stated below the drawing.

The standard of excellence in the drawing should not be that which shows the most neatly executed outline drawing of the subject studied, but rather that which most clearly conveys or records the point or points brought out in the lesson given.

It will be advisable therefore for the teacher (as well as his pupils) to combine his drawing lesson with his object lesson, and, to ensure this, the object lessons and drawing lessons should, if possible, be consecutive periods.

The method to be adopted when teaching this subject in the vernacular schools would be that in the object lesson the teacher will draw attention to certain facts and impress them on the minds of his pupils by large sketches on the blackboard. These should be carefully copied in their books, or other drawings should be made by the pupils themselves from the objects under study.

This principle should also be adopted in the teacher's study, but it will be expected that his resulting drawing will show more searching observation and be executed so as to record best the character of the object under study and to impress most clearly upon the class the point illustrated.

The drawings on the blackboard (*if in outline only*) should be drawn with white chalk, but if representation of solid things be attempted in a solid way, they should be drawn with coloured chalks in as nearly the true colours as possible.

Sometimes, where it is found difficult to make a true rendering on a black surface, a large sheet of brown or white paper should be used for chalk and charcoal work.

For work in books, usually, an HB pencil will be found sufficient.

In drawing fruits sectional drawings will be of great advantage.

In all possible cases drawings should be executed without the aid of guiding lines, and even when necessary very few guiding lines should be used.

Curriculum for Anglo-Vernacular Boys' schools, United Provinces, for 1922-23.

PREFATORY MEMORANDUM.

Head Masters and Managers of Secondary English schools are permitted, with the approval of the Inspector, and in conformity with the general principles that underlie the curriculum, to make modifications in the class-wise distribution of the work in any subject. Permission is also given, with the approval of the Inspector, to re-group scholars in classes above the primary stage for Arithmetic, Drawing, Classical Languages, Manual Training and Science, independently of the recognized classification.

English is no longer to be used as the medium of instruction in classes up to and inclusive of class VIII; History, Geography, Science and Mathematics are to be taught in the student's own language; but the use of English technical terms should be encouraged in classes VII and VIII, and in Mathematics students should be examined in the English language at the end of the middle stage. In the high stage alone should English be used as the medium of instruction.

Object lessons have been prescribed in the curriculum as *optional* subjects from class II downwards, but they should not be introduced into any school without the permission of the Inspector, who should satisfy himself that trained teachers are available and can be spared for teaching them. In no case should the work be entrusted to untrained teachers.

The teaching of English by the Direct Method should not be attempted except by specially trained teachers. Where such teachers are not available in sufficient numbers for all classes, a teacher or teachers, qualified to give such instruction, might be employed to supplement the ordinary class teaching by taking classes separately for an hour or so a week each.

Informal teaching on the subject of good manners should be given in all schools, and Head Masters may add at their discretion to the reading matter of any class of the Middle section, such portions of Madan-i-Tehzib, by Mirza Habib Husain, Khan Bahadur, as they may deem suitable for the class. The book is available in two parts at five annas and six pies each.

Hygiene and Temperance Teaching.

Informal talks in class on hygiene and on the evils, both physical and moral, resulting from intemperance should be held by teachers at intervals during the session.

Where satisfactory arrangements can be made, informal lectures on hygiene should also be given to classes VII to X on the lines of the syllabus given in the Appendix.

Note 1.—Books recommended for the use of teachers are—

Articles on Health by Major Megaw, I.M.S. (In the *War Journal*).

Alcohol and the Human Body, by Sir Victor Horsely and Mary D'Sturge, (Macmillan and Co.).

Alcohol and Life, by J. A. Hunter (Macmillan and Co.)

Manual of Temperance (Urdu or Hindi) by M. Mewa Ram, B.A., late Inspector of Schools, Jhansi division.

Note 2.—Head Masters should see that the subjects are not neglected and that the teaching is not merely perfunctory.

N.B.—Copies of this curriculum may be obtained from the Superintendent, Government Press, United Provinces, Allahabad, on payment of four annas per copy, excluding postage.

APPENDIX.

Suggested syllabus of forty lessons on hygiene, ten each in classes VII, VIII, IX and X.

Lessons. I–X. The skeleton: head with brain, trunk with vital organs, limbs, muscles and joints and their movements. The blood and its purification in the heart and lungs with a brief treatment of these organs. The stomach and intestines The body as a whole, working and growing, replacement of waste from the various sources, and the addition of entirely new tissues.

XI–XX. Nutrition and digestion: character and value of foods with rules governing eating: water, its function in the body, various means of contamination, precautions to be observed in its use.

XXI–XXX. Regular excretion. The skin and its functions. Cleanliness of the skin, mouth, teeth, eyes and ears. Cleanliness of clothes, beds, and houses.

XXXI–XL. Air: function of respiration; vitiation of the atmosphere and its effects on the individual; rules for ventilation. Physical exercises, its purpose and necessity; types of physical exercises suitable at various stages. Rest and sleep. Correct breathing and use of vocal organs. Postures for standing, writing and reading; the "squatting" posture. Effects of alcohol and tobacco on the organs.

Common accidents and their treatment. Common diseases and necessary preventive measures. Malaria, enteric, dysentery, cholera, plague, small-pox. A simple treatment of the eye and sight with rules for light when working.

Books for the use of teachers.

Hygiene and Physiology: By Drummond (Arnold).
The Laws of Health: By C. Douglas (Blackie).
School Hygiene: By Newsholm and Pakes (Sonnenschein).
Manual of Hygiene for use in India: By Banks (Macmillan).
Physical Education and Hygiene: By Welpton (University Tutorial Press).
School Hygiene: By Lyster (University Tutorial Press, London).
Physiology Charts: (E. J. Arnold and Son, Leeds and Glasgow).

MEMORANDUM ON HOME LESSONS.

(*Issued under the authority of G. O. no. 790/XV- 212, dated the 19th August, 1910, Educational department.*)

FROM the frequent complaints received regarding the excessive amount of work set to scholars by teachers for preparation at home there is reason to believe that the proper relation between work done out of school by the scholar and work done in the class-room is not always perfectly understood. Investigation has disclosed much divergence of opinion as to the amount of home lessons that may be reasonably exacted from the pupil in the different stages of his school career, the kind of work most suitable for preparation out of school hours, and the proper distribution of the time available for home preparation among the different subjects of study. Enquiries concerning the prevalent practice yield the conclusion that the matter is left too much to the discretion of individual teachers. Sometimes the pupil is expected to prepare for every lesson in school, and sometimes the work set is wholly unsuitable in both quantity and quality for study at home The matter clearly does not receive the attention it deserves, and since the abuse of the system of home lessons may produce permanent injury, both physical and mental, it is necessary that steps should be taken to protect scholars from it. It is desirable, therefore, without prescribing any rigid uniformity of system, to lay down certain general principles for the guidance of teachers.

(1) The fundamental principle on which home work rests is one which, it is to be feared, is too often forgotten, viz., that teaching and learning are two complementary processes, neither of which can be dispensed with or divorced from the other without detriment to educational progress. Activity on the part of the teacher must correspond to activity on the part of the learner. If either is absent, the process becomes one-sided and the result barren. Accordingly the teacher who confines himself to the "delivery" of lessons in school, with which home work is not at all or imperfectly correlated, will be little less deserving of condemnation than the teacher at the opposite pole, who neglects his class teaching and endeavours to make up for it by setting long tasks to be done at home.

(2) Though axiomatic it is too often forgotten that home work must be adapted, both in quantity and quality, to the capacity and the age of the scholar. Home work should not exceed the quantity which a boy of average capacity can be expected to prepare without undue mental strain and without engrossing all his spare time. The clever boy will no doubt take rather less and the dull boy rather more than the approximate time for home preparation indicated below, for they have been estimated to suit the capacity of the scholar of average ability. The aim in setting home lessons should be that a boy should be able to prepare his tasks thoroughly, and yet have sufficient spare time to devote to healthy recreations, mental and physical, of his own choice :—

(*a*) In the Lower Primary and Preparatory Sections no home lessons should be set at all. If the school hours are properly utilized, there is ample time for the teacher to teach and for the scholar to learn and apply what he has been taught.

(*b*) In classes above the Lower Primary stages the approximate time to be devoted to home lessons should not exceed in the Upper Primary section *one* hour, in the Lower Middle Section *one and a half* hours, in the Upper Middle Section *two* hours, and in the High Section from *two to three* hours.

(3) Home work should not be exacted from a scholar in too many subjects on the same day, nor too much in one subject. In this matter, the Head Master must exercise controlling authority over the class teachers. He should enquire from them from time to time what amount of work is set in the various subjects, and should see that too much time has not to be given to the study of one subject at the expense of another.

(4) Home work is one of the most important means whereby the student can be trained in the habit of doing things for himself. It must be something which he can accomplish on the basis of what he has learnt in school, not something beyond his powers which necessitates recourse to the assistance of a private tutor. A boy who is always being helped in the preparation of his home work by a private tutor loses confidence in himself and the habit of doing things independently. Moreover work, which is the result of collaboration with a private tutor, affords no criterion of the boy's capacity, progress or industry.

(5) Home work should be not only such as can be done without assistance but such as implies effort. It should never be a merely mechanical exercise which involves no intellectual exertion. It should not, for example consist of the transcription of "rough" work done in school. Under the influence of unsound tradition there has been and still is much waste of labour in this way. Such work is manual, not mental, and should be altogether unnecessary for boys who have been trained in habits of neatness and accuracy.

(6) In the lower stages, it cannot be expected that boys should break much new ground for themselves. They should therefore be almost exclusively occupied in going over the ground already covered in class, and this work of assimilation should be tested by the teacher at the beginning of a fresh lesson. It may therefore be laid down as a general rule that written exercises upon matter not already taught in school should rarely be set in the Upper Primary section. The work at home should take the form of recapitulating the work done in the day and of training the memory, which at this stage may be most usefully exercised. But since scholars cannot be expected to take much interest in what they find neglected by the teacher, written exercises should be punctually corrected and returned to them as soon as possible. It is most important that the work of this nature should never be allowed to fall into arrears. In the higher classes, pupils will of course have to break ground for themselves, e.g., to solve "a deduction," to study the history or the literary text-book, for the next day's lesson.

(7) There is a tendency to relegate too much written work to out-of-school hours. It cannot be too strongly emphasized that the best means of training pupils to write clearly, to arrange their work neatly, and to take pains is to insist on these points in class note-books, used in school under the eye of the master. There is plenty of time in school for written work of the nature of applying knowledge, if the teacher arranges his lessons properly. It may, in fact, be laid down as an almost invariable rule that no written work should be set as part of home lessons in the following subjects:—Arithmetic, algebra, grammar, exercises, original composition and science; nor should work be set in copy-book writing, in drawing or in elaborate map-making. In the higher classes, where a greater variety of subjects is taught,

and consequently time has to be economized, sketch maps and geometrical constructions may have to be done at home.

The abatement of the evil of excessive or unsuitable home lessons is a matter of such urgency and importance that now that their attention has been directed to it, it is hoped that Managers of schools and Head Masters will lose no time in making a searching enquiry into the practice prevailing in their own schools and take measures along the lines indicated above to prevent abuses in future. The responsibility for seeing that the nature and amount of home lessons set throughout the school are suited to the capacities of scholars, is an important part of a Head Master's duties, and he should from time to time assure himself that the teachers are acting strictly in accordance with his instructions.

CURRICULUM FOR ANGLO-VERNACULAR BOYS' SCHOOLS FOR THE SESSION BEGINNING IN JULY, 1922.

Subjects of study.

PREPARATORY SECTION.

A.

1. Reading (Urdu or Hindi).
2. Writing (Urdu or Hindi).
3. Arithmetic.
4. Drawing.
5. Object Lessons (optional).
6. Drill.

B.

1. Reading (Urdu or Hindi).
2. Writing (Urdu or Hindi).
3. Arithmetic.
4. Drawing.
5. Object Lessons (optional).
6. Drill.

LOWER PRIMARY SECTION.

CLASS I.

1. Reading (Urdu or Hindi).
2. Writing (Urdu or Hindi).
3. Arithmetic.
4. Drawing or Brushwork.
5. Object Lessons (optional).
6. Drill.

CLASS II.

1. Reading (Urdu or Hindi).
2. Writing (Urdu or Hindi).
3. Arithmetic.
4. Drawing or Brushwork.
5. Object Lessons (optional).
6. Drill.

UPPER PRIMARY SECTION.

CLASS III.

1. English.
2. Vernacular (Urdu or Hindi).
3. Arithmetic.
4. Geography.
5. Drawing or Brushwork.
6. Nature Study and Elementary Science (see general letter no. G-17/XVII—109, dated the 8th May, 1920).
7. Drill.

CLASS IV.

1. English.
2. Vernacular (Urdu or Hindi).
3. Arithmetic.
4. Geography (General and Physical).

5. Drawing or Brushwork.
6. Nature Study and Elementary Science (see general letter no. G-17/XVII—109, dated the 8th May, 1920).
7. Drill.

LOWER MIDDLE SECTION.

CLASS V.

1. English.
2. Vernacular (Urdu or Hindi).
3. Arithmetic.
4. Geography (General and Physical).
5. Drawing or Brushwork or Manual Training.
6. Nature Study and Elementary Science (see general letter no. G-17/XVII—109, dated the 8th May, 1920).
7. Drill.

CLASS VI.

1. English.
2. Mathematics (Arithmetic and Geometry).
3. Vernacular (Urdu or Hindi).
4. (*a*) History.
   (*b*) Geography (General and Physical).
5. One of the following alternative subjects:—
   - (i) A classical language (Persian, Arabic or Sanskrit).
   - (ii) Drawing.
   - (iii) Brushwork.
   - (iv) Manual Training.
6. Nature Study and Elementary Science (see general letter no. G-17/XVII—109, dated the 8th May, 1920).
7. Drill.

NOTE.—Boys should not be promoted to class VII unless they can read and write to dictation from a lower primary vernacular reader in a second character.

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.—TWO YEARS' COURSE

1. English.
2. Mathematics (Arithmetic, Algebra and Geometry).
3. (*a*) History.
   (*b*) Geography (General and Physical).
4. Vernacular (Urdu or Hindi).
5. Nature Study and Elementary Science (see general letter no. G-17/XVII—109, dated the 8th May, 1920).
6. One of the following subjects:—
   - (i) A classical language (Persian, Arabic or Sanskrit).
   - (ii) Drawing.
   - (iii) Manual Training.
   - (iv) Science.
7. Drill.

NOTE.—Boys should not be promoted to class IX unless they can read and write to dictation from an upper primary vernacular reader in a second character.

HIGH SECTION.

CLASSES IX AND X.—TWO YEARS' COURSE.

The two classes of the High Section are in direct preparation for either the Matriculation or the School Leaving Certificate Examination.

The Matriculation examination is held, and the courses of study are prescribed, by the Allahabad University.

The School Leaving Certificate Examination is held, and the courses of study are prescribed, by the Central Board of that Examination.

AIMS IN THE TEACHING OF ENGLISH.

The aims in the teaching of English are—

A. Practical.—To enable the pupil—

(1) to speak and read aloud English with correct pronunciation and some degree of facility;

(2) to understand the language when spoken;

(3) to write the language with grammatical correctness and with facility.

B. Literary.—To enable the pupil to read intelligently for pleasure modern English prose and poetry of moderate difficulty.

C. Linguistic.—To qualify the student by the systematic study of the structure of the language and by practice in its use for the further study of English literature.

SYLLABUS OF THE COURSES IN ENGLISH.

UPPER PRIMARY SECTION.

CLASS III.

Conversation and reading.—The early stages of instruction will be mainly oral, and should include systematic training in the sounds of spoken English, in connection with the pronunciation of easy words. By the end of the year the class should be able to carry on simple conversation about familiar objects and actions.

To read with correct pronunciation an easy primer; to render into the Vernacular easy sentences from the primer; to use the words of the primer in simple sentences; and to answer in English simple questions based on the matter in the primer.

Spelling and writing.—To spell the words of the primer; copy-writing in ruled books of easy familiar words; writing in copy-books (in the latter half of the course), dictation in ruled books of words and sentences previously read in the primer.

CLASS IV.

Conversation and reading.—To converse about common objects and actions; to read with correct pronunciation from a reader; to render into Vernacular easy sentences from the reader; to use the words of the reader in simple sentences and to answer in English simple questions based on the matter in the reader.

Spelling and writing.—To spell the words of the reader; dictation in ruled books of words and sentences previously read in the reader; writing in copy-books.

Grammar and composition.—Formal grammar should be commenced; division of a sentence into two parts: subject and predicate. To point out nouns, pronouns, adjectives, and verbs (without sub-classifications). Oral and written exercises in the above.

Easy written composition (at least once a week), e.g., completion of sentences. Easy written composition from the Vernacular into English idiomatic sentences (at least once a week).

LOWER MIDDLE SECTION.

CLASS V.

Conversation and reading.—To carry on simple conversation in English; to read with correct pronunciation from a reader; to render into the Vernacular passages from the reader; to use the words of the reader in simple sentences and to answer in English questions based on the matter in the reader.

Spelling and writing.—To spell the words of the reader; dictation in ruled books of words and sentences previously read in the reader; writing in copy-books.

Grammar and composition.—Revision of previous grammar in connection with more difficult sentences. Number and gender of nouns and pronouns, adverbs, prepositions and conjunctions (without sub-classification), interjections, the definite and the indefinite articles. The conjugation of the three simple tenses; the verb "to have" and the verb "to be." Oral and written exercises in the above.

Written composition (at least once a week), e.g., using the words and phrases of the reader in simple sentences. Written composition from the Vernacular into English idiomatic sentences (at least once a week).

CLASS VI.

Conversation, reading and recitation.—To carry on simple conversation in English; to read with correct pronunciation from a reader; to render into the Vernacular passages from the reader; to use the words of the reader in simple sentences, and to answer in English questions based on the matter in the reader. To recite from memory passages chosen from the reader.

Spelling and writing.—To spell the words of the reader; dictation in ruled books of passages chosen chiefly from the reader; writing in copy books.

Grammar and composition.—Revision of previous work in grammar; nouns in opposition; classification of nouns; pronouns; adjectives and adverbs; cases of nouns and pronouns; direct or indirect object; verbs; number and person; transitive and intransitive; weak and strong; participles; conjugation of remaining tenses. Analysis of simple sentences. Oral and written exercises in the above.

Written composition (at least once a week), e.g., using the words and phrases of the reader in simple sentences, reproduction of simple stories, practice in answering in writing easy questions on the subject-matter of the text. Written composition from the Vernacular into English idiomatic sentences and continuous prose. In connection with the above incidental instruction in elementary points of arrangement, construction, and punctuation.

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.

Literary course (at least four periods a week).—To carry on conversation in English; to read with correct pronunciation and expression from the prescribed text; to render into the Vernacular passages from the prescribed text; to form sentences and to answer questions in English based on the vocabulary of the text; to recite from memory suitable passages of English poetry and prose (to be selected by the Head Master).

Supplementary reading.—At least one easy book per session (for suitable books see lists of books issued by the Department separately).

Dictation and writing.—Dictation (at least once a week) of unseen passages of the standard indicated by the prescribed text. Writing in copy-books.

Grammar and composition.—Revision of previous work. Verbs; active and passive voices; moods; gerunds and verbal nouns; auxiliary verbs; complements of verbs; formal parsing; clause analysis of complex and compound sentences; elementary instruction in direct and indirect speech. Oral and written exercises in the above.

Written composition (at least once a week), including simple free composition, e.g., letter-writing and description and composition from the Vernacular into English idiomatic sentences and continuous prose. Incidental instruction in arrangement, construction, and punctuation.

TEXT-BOOKS.

*In classes III to VIII the following primers and readers are prescribed:—

Class.	Nelson's Readers.	Christian Literature Society's Readers.	Macmillan's Readers.	Tipping's Direct Method Books.	Longmans' series	The New Method Indian Readers (Gulab Singh and Sons).
		Indian Readers—			Longmans' English course for Indian schools:—	
III	Primer ..	Primers, nos. I and II.	King Primer or Conversational Readers, First and Second Primers.	First Direct Method English Reader.	1st year teachers' book. For teachers' use only.	
IV	Book I ..	Reader no. I ..	New English Reader I, or Conversational Readers, Readers I and II.	Second Direct Method English Reader.	1st year reading book.	Book I.
V	Book II ..	Reader no. II ..	New English Reader II.	Third Direct Method English Reader.	2nd year reading book.	Book II.
VI	Book III ..	Reader no. III or Direct Method Series English Reader no. III.	New English Reader III.	Fourth Direct Method English Reader.	3rd year reading book.	Book III.
VII	..	..	New English Reader IV and New English Reader IVB or New English Reader IV and High School Reader II.	..	4th year reading book. Longmans' new English Course for Indian schools:—	
VIII	..	..		..	Fifth reading book.	

*Questions will not be set from a prescribed reader for the High School Scholarship Examination.

The English copy-books to be used are—

Class.	Series.			
	Longmans, Green and Co.		Gulab Singh and Sons.	Blackie and Sons (Vere Fosters).
	Upright.	Semi-upright		
III and IV	1, 2, 3	2, 3, 4	1, 2, 3, 4	1, 2
V	4, 5	6	5, 6	3, 4
VI	6, 7, 8	7	7, 9, 10	5, 6
VII and VIII	10, 11, 12	8, 10	12, 13	7, 8, 9, 10

The books approved for translation exercises are those by—

(1) Gordon; (2) Stapley; (3) Dwarka Prasad; (4) Manual of Translation into English for Hindustani students, by E. S. Oakley; (5) Translation Practice in four parts for Lower and Upper Middle Sections, by B. D. Gordon (*for use of the Middle Section*); (6) Exercises in Translation from Urdu into English by J. R. Cornah, published by Gulab Singh and Sons, Lahore.

The following books on English Grammar and Composition are recommended for use:—

(1) A Primer of English Grammar } Published by the Christian Literature Society
(2) A Manual of English Grammar } for India, Madras.
(3) The Middle School English Grammar, Parts I and II (Standards V and VI), by L. Tipping, Macmillan and Co.
(4) Longmans' Junior School Grammar for India, by D. Salmon and A. J. C. Oakley.
(5) A Simple Grammar of Modern English, Longmans, Green and Co.
(6) The Suggestive Composition Book, Parts 2, 3 and 4 (Blackie and Sons).
(7) Lessons in English Composition, Books 1—3 by J. C. Nesfield, Macmillan and Co.
(8) A Junior Course of English Composition, S. K. Nath and G. C. Nath, Calcutta.
(9) Progressive Practice Book in "Direct" English Composition—Oral and Written, by P. Wren (K. and J. Cooper, Bombay).
(10) Picture Composition, Pupils' Book, by J. N. Fraser (K. and J. Cooper, Bombay).
(11) Middle School Grammar, Parts I and II, by E. Tydeman, Gulab Singh and Sons, Lahore (for use in classes V to VIII).
(12) An Easy Course of English Grammar and Composition, K. and J. Cooper, Bombay (for use in the High Section).

AIMS AND METHOD IN THE TEACHING OF MATHEMATICS.

Reasons for teaching Mathematics.—We teach Mathematics with a two-fold aim. On the one hand we use the subject as a means of developing the intelligence of the pupil; on the other hand we endeavour to make him skilful in such operations with numbers as are likely to be of practical use. Thus the teacher will endeavour to make clear to pupils the reasons which underlie processes and will also train them to gain the power of rapid, accurate, and confident calculation.

Neatness and arrangement in written work.—Great stress should be laid on neatness and care in arrangement. Errors in working can often be traced to slovenly arrangement or badly-formed figures. Pupils should be trained to arrange their work in a series of logical steps for each of which a reason can be given. Particular care should be taken in the early stages that units are not omitted, and that every line is a correct statement.

Oral work.—All new processes should be introduced and fixed in the mind by means of examples worked on the blackboard. These should involve only small numbers, so that calculations may be performed without resort to pen and paper. Even after a new rule has been established "Mental Arithmetic" should be a feature of most lessons. A few minutes given daily to the oral solution of problems is a valuable means of revising past works and in training pupils to gain rapidity and confidence in calculation. Up to class IV the teaching should be largely oral. In Geometry definitions must be first explained and understood and then *learnt by heart.*

Concrete illustrations.—Wherever possible concrete aid should be used. In the earliest stages the various operations should be taught by means of illustrations with objects which can be easily procured, such as headless matches, nuts, etc. Tables of weights and measures should be visualized by measurements of lengths, areas, volumes, capacities and weights; pupils should be practised in estimating the weights of common objects, the heights of tables, rooms and buildings, the areas of surfaces, the capacity of vessels and the distances between fixed points in the class-room and play-ground and should verify their estimates by experiments. At a later stage in the teaching of vulgar fractions and decimals the foot-rule graduated in inches and twelfths of an inch and in centimetres and milimetres should be in constant use. The metric measures of length, area, volume, weight and capacity should be learnt thoroughly; the class should be given exercises in measurement of length in the metric system, and allowed to handle metric measures of weight and capacity if available.

Nature of examples.—Once a rule has been learnt it should be applied to varied examples, both oral and written. Examples should, as far as possible, relate to matters within the experience of pupils and the numbers employed should be such as are likely to occur in practice; thus although pupils should be made familiar with operations in British money, prices in problems should as a rule be given in Indian money. Operations with large numbers should be the exception, and when they are employed they should be taken from real life, census returns, statistics of trade, returns of revenue, etc. In multiplication and division of decimals the methods adopted in the early stages should be such as can be employed in contracted work at a later stage; thus the methods given in Hall, Stevens and Sims' School Arithmetic for Indian schools are preferable to the older methods. To test the grasp of a new process and to connect it with what has been already learnt, it should be applied to problems which involve also the application of previous rules, thus no preceding rule should be allowed to drop out of sight.

Correlation.—The teacher should take every opportunity to break down the partitions which usually separate the three branches of elementary Mathematics. Thus even at an early stage in Arithmetic "rules" should be expressed symbolically in the language of Algebra; thus the rule for the addition and subtraction of fractions may be stated in a general form as follows:—

$$\frac{a}{b} \times \frac{c}{d} = \frac{ad \times bc}{bd}$$

Algebraical methods should be freely employed in the solution of arithmetical questions, and the graphs should be used to solve questions both in Algebra and Arithmetic.

Revision.—In no subject is revision more necessary than in Mathematics. As the mental machinery of pupils becomes somewhat rusty from lying up for the vacation, such revision is especially necessary at the commencement of each session.

Text-book.—Even the best text-book cannot take the place of the teacher. He has to expand the theory, which is usually a brief summary; he has also to provide the concrete illustration, to break down the artificial barriers which separate topic from topic and to supplement the lists of examples, by supplying oral questions and by inventing problems which are likely to bring the subject into close touch with the interests of the pupils.

SYLLABUS OF THE COURSES IN MATHEMATICS.

PREPARATORY SECTION.

CLASS A.

Arithmetic.—Notation and analysis of numbers in connection with concrete objects, as far as 50, and the writing of those numbers. Oral addition of any two numbers whose sum does not exceed 50, and subtraction of any two numbers neither of which exceeds 50. Simple oral problems in addition and subtraction. Construction and memorising of tables up to 5 × 10.

CLASS B.

Arithmetic—Revision.—Notation of numbers as far as 1,000. Analysis of numbers as far as 100. Simple addition of numbers, the answer not to exceed 1,000. Simple subtraction of any two numbers, neither of which exceeds 1,000. Construction and memorising of tables up to 10 × 10. Simple multiplication by numbers not greater than 5. Simple oral and written problems in the above.

LOWER PRIMARY SECTION.

CLASS I.

Arithmetic—Revision.—Notation extended to one lakh (1,00,000). The four simple rules with no term or answer exceeding one lakh. Construction and memorising of multiplication tables up to 16 × 12. Addition and subtraction in Indian money with no term or answer exceeding Rs. 1,000. Simple oral and written problems in the above.

CLASS II.

Arithmetic—Revision.—Further extension of notation to crores and millions. The four compound rules and reductions in Indian money and weights, in common use in the United Provinces, with miscellaneous examples. Simple oral and written problems in the above.

UPPER PRIMARY SECTION.

CLASS III.

Arithmetic—Revision of the previous work with special attention to (*i*) the best methods of working; (*ii*) application to oral and written problems relating to things within the experience of the pupils; (*iii*) rapidity in oral work; and (*iv*) neatness and orderly arrangement in written work. The four compound rules and reductions in British money. Factors and prime numbers.

CLASS IV.

Arithmetic—Revision.—G. C. M. or H. C. F. by factors. L. C. M. The four compound rules and reductions in British weights, and measures of length, time and capacity in common use; instruction to be as realistic as possible. The four simple rules in vulgar fractions with easy examples. Oral and written problems in the above.

LOWER MIDDLE SECTION.

CLASS V.

Arithmetic—Revision.—More difficult examples in vulgar fractions. Vulgar fractions of concrete quantities. Practice, metric measures of length, weight and capacity; instruction to be as realistic as possible. Simple calculations in the four simple rules with decimal fractions (excluding recurring decimals). Conversion of vulgar fractions into decimal fractions to a given number of places, and vice versa (excluding recurring decimals). Oral and written problems in the above.

CLASS VI.

Arithmetic—Revision.—Simple percentages. More difficult examples with decimal fractions (excluding recurring decimals). Decimal fractions of concrete quantities. The unitary method. Simple interest. Oral and written problems in the above. Units of length in the British and Metric systems. Calculations. Measurement of straight lines. Measurement of curved lines. Rule for the length of the circumference of a circle. The following experiments:—Find the number of c.m. in 1 inch; Measure the circumference and diameter of a circle and so find the value of 'pi'.

Geometry.—Drawing and measurement of straight lines and angles; parallel straight lines; angles of a triangle; construction of triangles and parallelograms.

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.

Arithmetic—Revision.—Units of area in the British and Metric systems. Rule for the area of a rectangle. Calculations. Experiment: By squared paper prove the formula for the area of a rectangle. Use of squared paper to find the area of figures other than rectangles. Formula for the area of a triangle. Experiment: By squared paper, find the area of a triangle and irregular figures. Units of volume in the British and Metric systems. Rule for the volume of a rectangular solid. Calculations. Land measures in use in the United Provinces. Square root by factors. Simple and compound proportion. Proportional parts. Harder percentages. Profit and loss. Oral and written problems in the above.

Algebra.—Symbolical expression. Substitution. Brackets. Addition. Subtraction. Easy multiplication. Easy division. Simple equations with one unknown quantity. Graphs of straight lines Plotting of statistics. Simultaneous equations involving two unknown quantities (both equations linear). Graphical solution of simultaneous equations. Simple problems, involving the above.

Geometry.—As in the text-book prescribed.

TEXT-BOOKS.

The books recommended for use are—

ARITHMETIC.

For class VII and upwards.

(1) A School Arithmetic for Indian Schools by Hall, Stevens, and Sims (Macmillan).

(2) Longmans' Senior Arithmetic [Indian edition, by Dexter, Garlick, and Pollard (Longmans, Green and Co.)]

(3) A New Arithmetic for Indian Schools by Workman and Sime (Gulab Singh and Sons).

(4) Senior Modern Arithmetic, revised by A. H. Mackenzie, Indian Press, Allahabad (Re. 1-8).

For classes below VII.

Classes I and II.—Vernacular School Arithmetic for Classes I and II (Urdu or Hindi), published by Macmillan and Co.

Classes III and IV.—Anglo-Vernacular School Arithmetic for classes III and IV (Urdu or Hindi), published by the Newal Kishore Press, Lucknow (Urdu, 10 annas and 9 pies; Hindi, 10 annas); or Modern Arithmetic, Book I (Urdu or Hindi), by A. H. Mackenzie, Indian Press, Allahabad (8 annas).

Classes V and VI.—Anglo-Vernacular School Arithmetic for classes V and VI (Urdu or Hindi), published by the Newal Kishore Press, Lucknow (Urdu 11 annas; Hindi, 10 annas and 9 pies); or Modern Arithmetic, Book II (Urdu or Hindi), by A. H. Mackenzie, Indian Press, Allahabad (5 annas).

ALGEBRA.

Baker and Bourne's Shorter Algebra (Bell and Sons), or Hall's School Algebra for Indian Schools, Part I (Macmillan and Co.), or Hall's Algebra for Middle Schools in India, 1918 edition (for use in middle section). (Macmillan and Co.)

GEOMETRY.

For class VI.

Pierpoint's Elements of Geometry, Part I, Experimental Section, Urdu and Hindi editions (Indian Press, Allahabad),

or

Hall and Stevens' Lessons in Experimental and Practical Geometry (Macmillan and Co.)

For classes VII and VIII.

Pierpoint's Elements of Geometry in Theory and Practice (The Indian Middle School edition), published by Longmans, Green and Co.

or

Hall and Stevens' School Geometry, Parts I and II (Macmillan and Co.).

AIMS AND METHOD IN TEACHING HISTORY.

Class VI.—Whether the pupils have copies of the text-book or not is immaterial. If they have, the greatest care must be taken that the lesson does not develop into a reading lesson. Spontaneous narrative alone will secure the desired ends. As the story proceeds, the teacher should question the class to see whether they follow the course of events, and should encourage free communication of the feelings which the narrative produces in the minds of the pupils. The pupils may at intervals be required to write out a story which they have heard in their own words. No notes should be taken, for these will be memorised and reproduced. What is chiefly required of the teacher is a power of vivid narrative and of feeling the emotions which he strives to arouse. There should not be a written examination in this class, but occasionally the Head Master or a senior teacher should test the class as a whole by an oral examination.

Classes VII and VIII.—However simple the book may be there is an ever-present danger that the pupils will derive incorrect ideas from it. The lessons therefore should be read in class in sections of suitable length, the teacher confining his explanations of the text to making the meaning clear. After the reading he should, partly by narrative and partly by questions, build up a connected account of the events described. During this he should, as far as the means at his disposal allow, bring to the aid of the text pictures, sketch maps, time charts, reproductions of coins, and other historical objects. The aim at this stage is to connect the main facts as a whole and to develop a sense of time and of cause and effect. He should not fail to seize any chance of showing how one event was the natural outcome of others. The treatment should be largely biographical. New ground should as a rule be broken with the help of the teacher; the pupils however should independently learn at home what has been previously taught in class. It will be found useful to set the class questions to answer in writing at fairly frequent intervals. This makes for clarity of ideas and expression.

Classes IX and X.—The treatment does not differ radically from that in classes VII and VIII, but the pupils should usually read each day's lesson before it is taken up in class. The teacher should emphasize the sequence of events. It is often found effective at this stage to follow a topical order in preference to a chronological one, as this consolidates and systematizes the pupil's knowledge better.

SYLLABUS OF THE COURSES IN HISTORY.

LOWER MIDDLE SECTION.

CLASS VI.

Easy Stories from Indian History in the Vernacular (one period a week).

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.

History—Class VII.—Outline of Indian History up to the end of the Moghul Empire.

Class VIII.—Outline of Indian History from the decline of the Moghul Empire to the present time.

TEXT-BOOKS.

Class VI.—Allen's Heroes of Indian History in Urdu (revised edition) or Hindi, Longmans, Green and Co.,

or

Marsden's Stories from Indian History in Urdu or Hindi, Macmillan and Co.

Classes VII and VIII.—Urdu History of India, Parts I and II, by E. Marsden and Jiya Ram, or Hindi History of India, Parts I and II, by E. Marsden and Sita Ram, Macmillan and Co.

AIMS AND METHOD IN TEACHING GEOGRAPHY.

Geography is on the one hand a study of the configuration of the Earth—its continents, seas, mountains, forests, rivers, etc.; on the other hand it is a study of the needs of man and how he makes provision for these needs. Thus we only partly teach geography if we limit our teaching to a study of physical facts; the chief value of these facts is that they help us to understand how men live and work in different parts of the earth.

In studying a country consider it first as a whole—its general build, the long and short slopes of the land, the way in which rivers run, where there are large fertile tracts, where desert and where forests. Then in more detail; the great mountain ranges, the chief river basins, the great plains, the climate, the population and occupations, the political divisions, the trade routes and towns. For each of these topics a separate map should be drawn on the blackboard and by the pupils.

The teaching should not be confined to a mere list of names. Facts are of value only if brought into relation with other facts. The teachers should point out why here there is a forest, there a desert, how the nature of the coast has promoted intercourse with other countries, how mountains have prevented intercourse, how rivers have promoted trade and density of population, what natural resources have given rise to particular industries, how the climate has influenced the life and work of the people. Facts are needed and must be learnt; but a fact is remembered with greater ease if it is understood, and facts are of use only if we can connect them with causes and results.

In giving facts to the class something more than a bare recital is needed. No subject makes greater demands on the descriptive powers of the teacher. He should endeavour to carry the pupils in imagination to the country he is describing; to do this he should, as far as possible, supplement vivid description by pictures, photographs, picture postcards, and, if suitable arrangements can be made, lantern slides.

Sketch map by pupils.—The pupils' note-book should contain a series of sketch maps for each country, each map illustrating a particular feature. Thus, one map should contain the mountain system, a second map the river system, a third the distribution of rainfall, and so on. Almost every topic discussed can be illustrated by a sketch map and benefits thereby. In order to draw these sketch maps it is not necessary for pupils to learn to draw the outline by heart, except perhaps in the case of India, whose outline is easily remembered. The teacher should supply blank outline maps (cyclostyled or printed), and these should be used to illustrate various topics. Many maps, each illustrating a single feature, are preferable to one elaborate map crowded with details.

Blackboard map by the teacher.—These should be built up as the lesson proceeds; each map should contain the elements essential to the lesson and no others. Coloured chalks are a valuable help; they make the various features stand out clearly from one another, and if the same colour be used consistently to represent the same feature, e.g., red for high land, blue for rivers, yellow for towns, etc., much time will be gained. Outline maps drawn on blackboard cloth are convenient as the basis for these maps; they may be procured from Messrs. G. Phillip and Sons, through Messrs. Longmans, Green and Co., Bombay.

Wall maps.—The school should in addition possess for each continent (1) a photographed relief map, and (2) a plain orographical map, preferably without names. It is important that the map chosen should contain only essentials.

The teacher should make his own maps to illustrate special points, e.g., vegetation, density of population, rainfall, etc.

Atlases.—Each pupil should possess an atlas. The atlas should be brought regularly to the geography class, and should be constantly referred to during the course of the lesson.

Books and apparatus.—The teachers should consult the "Guide to Geographical Books and Appliances" published for the Geographical Association, by G. Phillip and Sons (Messrs. Longmans, Green and Co., Bombay).

SYLLABUS OF THE COURSES IN GEOGRAPHY.

UPPER PRIMARY SECTION.

CLASS III.

General Geography.—Measurement of distances; direction, North, South, East, West, North-East, North-West, South-East, South-West; drawing of North and South line in play-ground by means of shadow cast by vertical stick; meaning of scale; plan of class-room, plan of school and play-ground; explanation of the map of the district; the meaning of a map to be explained as far as possible by excursions in the neighbourhood.

CLASS IV.

General Geography.—Revision of the work of class III.

India.—Further explanation of the meaning of a map, by reference to a comparison of the map of India with a relief model of India as regards the following points:—The Himalayas, the Deccan Plateau, the Eastern and Western Ghats, the coast strips and the towns, Calcutta, Madras, Bombay, Delhi, Allahabad, Lucknow, Cawnpore.

Description of Northern India with reference to the nature of the country and the climate.

The following maps to be drawn by the pupils :—

(1) Map of India, showing the Himalayas, the Sulaiman Mountains, the Vindhyas, the Indus with the five rivers of the Punjab, the Ganges with its main tributaries, the position of the United Provinces.

(2) Map of the United Provinces, showing divisions and their headquarters.

The World.—Shape of the Earth, its rotation, light and darkness, the poles and equator, land and water, the names and relative position on the globe of continents and oceans.

Where arrangements can be made oral lessons should be given describing typical scenery or life of man in various parts of the world. They should be illustrated by pictures, lantern slides, etc.

In preparing these lessons, the teacher should consult the following books :—World Pictures, by J. B. Reynolds (Black), Man in Many Lands, by Lyde (Black), and the Peeps at Many Lands Series (Black).

Physical Geography.—Explanation of the following terms by reference to the globe and map :—Continent, *ocean, gulf, bay,* lake, *strait,* cape, *peninsula, isthmus,* mountain, island. Description of the sea.

LOWER MIDDLE SECTION.

CLASS V.

General Geography.—Revision of previous work.

India.—Position, outline, nature of coasts, important harbours and neighbouring islands, the chief physical features, climate, production, provinces, chief Native States, and chief towns.

The following maps should be drawn :—

(1) Outline map with main harbours and neighbouring islands.

(2) Outline map with chief mountains and rivers.

(3) Outline map with provinces and principal Native States.

(4) Outline map with chief towns.

(5) Complete map including all the above.

British Empire.—Position of the following :—British Isles, Canada, Australia, New Zealand, South Africa, with very brief description of climate and nature of the country. As far as possible lessons should be illustrated by pictures.

World.—Where arrangements can be made oral descriptive lessons on the lines prescribed for class IV.

Physical Geography.—Simple explanation of clouds and rain, the effect of mountains in producing rain, the monsoons, the formation of a delta.

CLASS VI.

General Geography.—Revision of previous work.

Asia.—Coast line, great mountain ranges and tablelands, great plains, chief rivers, countries, neighbouring islands, chief towns, people, climate, products.

World.—Where arrangements can be made oral descriptive lessons on the lines prescribed for class IV.

Physical Geography.—Surface of the earth, volcanoes and earthquakes, the zones, latitude and longitude.

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.

General Geography.—Revision of previous work.

Europe, America, Africa and Australia : to be treated in the same way as Asia in Class VI.

Physical Geography.—Seasons, solar system, waves, tides and currents.

TEXT-BOOKS.

UPPER MIDDLE SECTION.

Geography.

Classes IV, V and VI.—*Anglo-Vernacular School Geography, Book I (Urdu or Hindi), published by Longmans, Green and Co. (Urdu, Rs. 2-4-0; Hindi, Re. 1-4-0).

Classes VII and VIII.—*Anglo-Vernacular School Geography, Book II (Urdu or Hindi), published by Longmans, Green and Co. (Urdu, Rs. 3; Hindi, Rs. 2-4-0).

SYLLABUS OF THE COURSES IN VERNACULAR (URDU OR HINDI).

PREPARATORY SECTION.

Class A—Reading.—To read correctly words and easy sentences from a primer.

Writing.—To copy characters and easy words from a primer. Special *takhtis* with letters and figures in indelible ink are recommended for use.

Class B—Reading.—To read sentences at sight from the text-book in one form of the vernacular and to know the meaning of words.

Writing.—To copy sentences from the text-book in Urdu or Nagri character. Special *takhtis* with letters and figures in indelible ink are recommended for use.

LOWER PRIMARY SECTION.

CLASS I.

Reading.—To read accurately at sight from the text-book in one form of the vernacular, and to explain the meaning of words and sentences.

Writing.—To copy and to write sentences to dictation from the text-book. Special *takhtis* with letters and figures in indelible ink are recommended for use. Copy-books to be shown.

CLASS II.

Reading.—To read accurately at sight from the text-book in one form of the vernacular, and to explain the meaning of words, sentences and paragraphs; to turn verse into prose.

Writing.—To write sentences to dictation from the text-book in Urdu or Nagri character. Copy-books to be shown.

UPPER PRIMARY SECTION.

CLASS III.

Reading.—To read accurately at sight from the text-book in one form of the vernacular, and to explain the meaning of words, sentences and paragraphs. To turn verse into prose order.

Writing.—To write passages to dictation from the text-book. Copy-books to be shown.

Grammar.—To know the parts of speech.

CLASS IV.

Reading.—To read at sight from the text-book in one form of the vernacular, and to explain words, allusions and sentences.

Writing.—To write passages to dictation from a book of equal difficulty with the text-book, or an original letter on some ordinary topic in Urdu or Nagri character. Copy-books to be shown.

Grammar.—Etymology.

LOWER MIDDLE SECTION.

CLASS V.

The literary reader prescribed. Composition of letters in current idiomatic style, with the proper forms of courtesy.

Grammar.—Parts of speech and etymology of words.

---

*These geographies are available in parts also:—
Book I, Part I (Urdu, 10 annas; Hindi, 8 annas).
Part II (Urdu, 10 annas; Hindi, 8 annas).
Part III (Urdu, 12 annas; Hindi, 8 annas).
Book II, Part I (Urdu, Rs. 1-2-0; Hindi, Re. 1).
Part II (Urdu, Rs. 1-4-0; Hindi, Rs. 1-2-0).

CLASS VI.

The literary reader prescribed. Composition and Grammar as in class V.

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.

The literary reader and the grammar prescribed. Original letter-writing.

TEXT-BOOKS.

PRIMERS AND READERS.

PREPARATORY CLASS A.

Urdu.—Urdu Primer, by Khan Bahadur Mirza Habib Husain, or Urdu ka Naya Qaida (revised edition), published by the Indian Press, Allahabad.

Hindi.—Hindi Primer, published by the Indian Press, Allahabad, or Hindi Kindergarten Primer (revised edition), by Brijbasi Lal, or Illustrated Hindi Primer, by Girdhar Lal Pacholy.

PREPARATORY CLASS B.

Urdu.—Urdu Reader for Preparatory Class B of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Hindi.—Hindi Reader for Preparatory Class B of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

CLASS I.

Urdu.—Urdu Reader for Class I of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Hindi.—Hindi Reader for Class I of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

CLASS II.

Urdu.—Urdu Reader for Class II of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

Hindi.—Hindi Reader for Class II of Vernacular Schools, published by the Newal Kishore Press, Lucknow.

CLASS III.

* *Urdu.*—Urdu Reader for Classes III and IV of Vernacular Schools, published by the Newal Kishore Press, Lucknow, and Sawad-i-Urdu by Khan Sahib Muhammad Ismail, published by the Newal Kishore Press, Lucknow.

* *Hindi.*—Hindi Reader for Classes III and IV of Vernacular Schools, published by the Newal Kishore Press, Lucknow, and Hindi Praveshika (revised edition of 1919), published by the Indian Press, Allahabad.

CLASS IV.

* *Urdu.*—Urdu Reader for Classes III and IV of Vernacular Schools, published by the Newal Kishore Press, Lucknow, and Sawad-i-Urdu by Khan Sahib Muhammad Ismail, published by the Newal Kishore Press, Lucknow.

* *Hindi.*—Hindi Reader for Classes III and IV of Vernacular Schools, published by the Newal Kishore Press, Lucknow, and Hindi Praveshika (revised edition of 1919), published by the Indian Press, Allahabad.

CLASS V.

Urdu.—Ahsanul-Intikhab, by Muhammad Abdul Jalil, published by E. J. Lazarus and Co., Benares (prose—up to the end of the lesson "Dehat ki Zindgi" and poetry—up to the end of the ghazal by Asir), or Kumuk-i-Urdu, by Khan Sahib Muhammad Ismail, published by the Newal Kishore Press, Lucknow (prose—up to the end of the lesson "Safar Nama" and poetry—up to the end of the ghazal by Siraj Uddin Bahadur Shah Zafar).

---

* The literary readers (Sawad-i-Urdu and Hindi Praveshika) prescribed for use in classes III and IV should not be commenced until the scholar has made sufficient progress in the common language to enable him to study the literary reader with advantage.

Hindi.—Hindi Sahitya Kaumudi (up to the end of the lesson "Maharani Victoria"), by Ramji Lal Sharma, Hindi Press, Allahabad (10 annas).

CLASS VI.

Urdu.—Ahsanul-Intikhab, by Muhammad Abdul Jalil, published by E. J. Lazarus and Co., Benares (prose—from the lesson "Maujuda Talim-o-Tarbiat ki Shabih" to the end of the prose portion, and poetry—from the qasida by Wasti to the end of the poetry portion), or Kumuk-i-Urdu, by Khan Sahib Muhammad Ismail, published by the Newal Kishore Press, Lucknow (prose—from the lesson "Hamdardi" to the end of the prose portion, and poetry—from the ghazal by Mirza Asad Ullah Khan Ghalib to the end of the poetry portion) or Ganjina-i-Urdu (prose—from the lesson "nek Nasihat" to the end of the prose portion, and poetry—from the Masnaviyat by Shams-ul-ulama Maulana Muhammad Husain Azad to the end of the poetry portion) by Muhammad Nurul Husain, Messrs. Ram Prasad and Brothers, Etawah (8 annas).

Hindi.—Hindi Sahitya Kaumudi (from the lesson "Niti Ratna Mala" to the end of book), by Ramji Lal Sharma, Hindi Press, Allahabad (10 annas).

CLASSES VII AND VIII.

Urdu.—Safina-i-Urdu, by Khan Sahib Muhammad Ismail, Newal Kishore Press, Lucknow, or Shama-i-Urdu, Parts I and II, by Muhammad Aslam Saifie, Newal Kishore Press, Lucknow (10 annas).

Hindi.—Hindi Ratna Sangrah, by Sudarshanacharya, Griha Lakshmi Press, Allahabad (10 annas).

Grammars.

Urdu.—Risala-i-Qawaid-i-Urdu, Parts I and II, published by the Mission Press, Allahabad.

Hindi.—Bhasha Vyakaran, by Chandra Mauli Shukul, published by the Indian Press, Allahabad. Hindi Middle Vyakaran, published by the Newal Kishore Press, Lucknow.

Copy-books.

Urdu.—Urdu Khushkhati ka Naya Silsila (Urdu Copy-books), nos. I to IV (1918), published by Gulab Singh and Sons, Lahore. (Price 0-1-7, 0-1-7, 0-2-3 and 0-2-3), or Urdu copy mashq, nos. 1—4, by M. H. Jalal Uddin Ahmad Jafri, Anwar Ahmadi Press, Allahabad. (Price 0-2-0, 0-1-6, 0-1-3, and 0-1-3).

Hindi.—Hindi Copy-books, nos. I to IV, published by the Indian Press, Allahabad.

SYLLABUS OF THE COURSES IN CLASSICAL LANGUAGES.

Persian.

LOWER MIDDLE SECTION.

CLASS VI.

Literary Course.—The reader prescribed.

Grammar.—Verb with its conjugations and Asmai Mustaqat.

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.

Literary Course.—The reader prescribed.

Grammar.—Class VII.—The whole of Sarf.
,, VIII.—The whole of Naho.

Arabic.

LOWER MIDDLE SECTION.

CLASS VI.

Literary Course.—The reader prescribed.

Grammar.—Mazi, Muzara and Amr.

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.

Literary Course.—The reader prescribed.

Grammar.—Class VII.—The rest of Fi'l (فعل), Ism and Zamir.
" VIII.—Naho.

Sanskrit.

LOWER MIDDLE SECTION.

CLASS VI.

Text and Grammar.—As in the text-book prescribed.

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.

Text and Grammar.—As in the text-book prescribed.

TEXT-BOOKS.

Persian.

READERS.

CLASS VI.

Persian Course for First Middle Class (1917—second edition), Gulab Singh and Sons, Lahore.

CLASSES VII AND VIII.

The following selections :—

(1) *Gulistan* (گلستان) by Sadi : chapters III and VII (omitting the portion headed
" مناظرۂ سعدي با مدعي در بيان توانگري و درويشي ")

(2) *Tarikh-i-Ferishta* (تاريخ فرشته)

ذكر شاهي شيرشاه افغان بن حسن سور و ذكر سلطنت سليم شاه بن شير شاه افغان سور
leaving out the word (روافض) after the word (ترکمان)

(3) *Bostan* (بوستان) of Sadi بوستان باب اول leaving out the last two couplets of the story of Abdul Aziz and his ring as well as the (قول) following it and also omitting the whole story of Mamun and his slave girl.

(4) *Shahnama* (شاهنامه) of Firdausi commencing
" بر تخت نشستن جمشيد و پيدا كردن آلات جنگ و آموختن ديگر هنرها بمردم "

GRAMMARS.

For class VI.—Safwatul Masadar.

For classes VII and VIII.—Farsi Grammar, by Mir Ahmad Shah (Gulab Singh and Sons, Lahore),

or

Ashal-ul-Qawaid, by Sahid-ud-din Ahmad.

The books on translation recommended for use are (1) Translation Exercises, Parts 1 to 3, Urdu-Persian and Persian-Urdu, by Bishambhar Dayal, published by Ram Narain Lal, Bookseller, Allahabad (for use in Middle and High sections).

(2) Translation from English into Persian by Saiyid Husain Ali, revised by Hidayat Hussain (for use in the High section).

(3) Tarjuman-i-Parsi in three parts in one volume, by Qazi Abdur Rahman (for use in the Middle section for translation from Persian into Urdu and vice versa).

Arabic.

READERS.

Class VI.—Arbi ki Pahli Kitab,
" VII.—Arbi ki Dusri Kitab, } by Mir Ahmad Shah (Gulab Singh and Sons, Lahore).
" VIII.—Arbi ki Tisri Kitab,

Note.—No edition of the Persian Middle Course based on the above syllabus should be used in schools unless it has been previously approved by the Director of Public Instruction. "Persian Middle Course", published by the Indian Press, Allahabad, is approved.

GRAMMARS.

CLASSES VI AND VII.

Kitab-us-Sarf, by Abdul Rahman of Amritsar, Ghulam Ali, Bookseller, Kashmiri Bazar, Lahore.

CLASS VIII.

Kitab-un-Naho, by Abdur Rahman of Amritsar, Ghulam Ali, Bookseller, Kashmiri Bazar, Lahore.

Sanskrit.

READERS AND GRAMMARS.

Class VI.—Sanskrit Reader and Grammar, Part I, published by the Indian Press, Allahabad.

Class VII.—Sanskrit Reader and Grammar, Part II, published by the Indian Press, Allahabad.

Class VIII.—Sanskrit Reader and Grammar, Part III, published by the Indian Press, Allahabad.

AIMS AND METHOD IN TEACHING DRAWING.

Method.—Teachers of drawing should bear in mind that it is far more important to train the eye and develop the suppleness of the hand than to produce mechanically accurate copies of drawings. They should therefore see that pencils of suitable length are used and kept properly pointed. They should forbid the shifting and turning of the paper in the process of drawing and insist on the adaptation of the hand to the lines required. They must accept responsibility for seeing that scholars do a satisfactory amount of work, and while on the one hand hasty and untidy work is to be checked, on the other hand anything of a laboriously minute and mechanical nature is to be avoided.

In model drawing the importance of rapidity as well as accuracy should be emphasized. The principles of perspective must be thoroughly explained and ample demonstration and personal correction must occupy each lesson. The surface on which the object stands should always be indicated, and the drawing should be made as large as the paper will allow.

It must be borne in mind that geometrical, perspective and model drawing—though related—are distinct exercises; while the former requires the application of geometrical knowledge the latter fails in its object unless it strengthens the ability to draw simple objects freely, in good line, and correct relationship of position.

As regards geometrical drawing, neatness, absolute accuracy and facility in using a few instruments are the ends to be kept in view.

All diagrams should be lettered and made of large size. Both ink and pencil should be used, alternately or in combination. Each problem must be carefully "taught" by the teacher and not merely copied by the boys on the larger scale from the text-book pages.

In free hand and model drawing no mechanical aids should be allowed.

SYLLABUS OF THE COURSES IN DRAWING.

PREPARATORY SECTION.

CLASS A.

Drawing of straight lines, squares and oblongs.

CLASS B.

Drawing of curved lines, circles and figures like circles, bounded by curved lines (on slate). Drawing to be taught on the blackboard; no books to be prescribed.

Lower Primary, Upper Primary, Lower Middle and Upper Middle Sections.

As in the drawing books prescribed.

TEXT-BOOKS.

CLASS I.

As in Macmillan's Official Drawing Book, no. 1; or as in Nelson's Graduated Drawing Book, no. 1; or as in Indian Drawing Books for Vernacular Schools, Book I; or as in

Banbery's Scholars' Drawing Book, no. 1, in Urdu or Hindi; or as in Indian Drawing Copy-slips for Vernacular Schools, no. 3, published by the School Book and Apparatus Dépôt, Lucknow (slates to be used during the first half year, then paper).

CLASS II.

As in Macmillan's Official Drawing Book, no. 2; or as in Nelson's Graduated Drawing Book, no. 2; or as in Indian Drawing Books for Vernacular Schools, Book II; or as in Banbery's Scholars' Drawing Book, no. 2, in Urdu or Hindi; or as in Indian Drawing Copy-slips for Vernacular Schools, no. 4, published by the School Book and Apparatus Dépôt, Lucknow.

CLASS III.

As in Macmillan's Official Drawing Book, no. 3; or as in Nelson's Graduated Drawing Book, no. 3; or as in Banbery's Scholars' Drawing Book, no. 3.

CLASS IV.

As in Macmillan's Official Drawing Book, no. 4; or as in Nelson's Graduated Drawing Book, no. 4; or as in Banbery's Scholars' Drawing Book, no. 4.

CLASS V.

As in Macmillan's Official Drawing Book, no. 5; or as in Nelson's Graduated Drawing Book, no. 5; or as in Banbery's Scholars' Drawing Book, no. 5.

CLASS VI.

Macmillan's Oriental School Drawing Book, Part I; or Nelson's Graduated Drawing Book, no. 6 or 7; or Banbery's Scholars' Drawing Book, no. 6.

CLASSES VII AND VIII.

Free hand Drawing.—Macmillan's Oriental School Drawing Book, Parts II, III and IV (the designs in Part IV to be copied in outline only); or Nelson's Graduated Drawing Books, nos. 9 and 11.

N. B.—Teachers of limited experience in the teaching of drawing are recommended to use "Longmans' Complete Drawing Course, Part I", by I. H. Morris, Longmans, Green & Co., Teachers of drawing in schools where Banbery's Scholars' Drawing Books are used are recommended to use "Teachers' Drawing Manual" in English, Urdu or Hindi, by H. Banbery, Indian Press, Allahabad.

SYLLABUS OF THE COURSES IN BRUSH-WORK.

PREPARATORY SECTION.

CLASS A.

Free-arm drawing on the blackboard or on slates, of straight lines, squares and oblongs, with coloured chalks—the squares and oblongs being filled up with a mass of colour.

CLASS B.

Free-arm drawing as in the preparatory section A, and free-arm drawing on the blackboard or on slates, of curved lines, circles and figures like circles, bounded by curved line with coloured chalks—all figures being filled up with a mass of colour on the same system as the brush-work.

LOWER PRIMARY SECTION.

CLASS I.

Some of the elements and their combinations in brush-work which compose simple flowers and leaves—those known technically as blobs, lines and spots.

CLASS II.

Further brush-work forms, lily-leaves and thick curves.

UPPER PRIMARY SECTION.

CLASS III.

Petals, and right and left petal curves, with combination of all the past work.

CLASS IV.

Various combinations of past forms, making leaves, etc., and well-known flowers.

LOWER MIDDLE SECTION.

CLASS V.

Brush-work of ordinary Indian flowers.

CLASS VI.

Further forms, insects, birds, flowers, etc.

NOTE.—In brush-work the following are recommended for teachers' use :—

Longmans' Charts of Colour, Drawing and Design in three series by Cecil L. Burns, Principal, School of Art, Bombay, together with a Teachers' Hand-Book explaining the charts.

Elementary series.—Ten sheets containing alternate lessons in colour and geometrical drawing.

Intermediate series.—Ten coloured copies of leaf forms with a sheet of geometrical problems and exercises showing their connection with geometrical patterns.

Advanced series.—Ten large coloured free-hand copies of flowers, animals or other objects seen in nature, each accompanied by a design based upon a flower, illustrating the connection between nature and design.

SCIENCE.

There are two courses in Science, (1) a course in compulsory science for classes III to VIII and (2) an optional course in Science for classes VII and VIII. The course in compulsory science is confined to schools which have the necessary staff and equipment. Details of the course are given in a memorandum which may be obtained on application from the Director of Public Instruction.

Books recommended for the course in compulsory science :—

For teachers

(1) Familiar Indian Animals (Teacher's Hand-book to “Animals of India”), by F. Finn (12 annas) with animal wall sheets. Macmillan and Co., Unmounted sheet, Rs. 2 each.

AIMS AND METHODS IN TEACHING THE OPTIONAL COURSE IN SCIENCE (CLASSES VII AND VIII).

In framing the courses for classes VII and VIII the Department has kept in view on the one hand the limitations of poorly equipped schools, in which there are few facilities for practical work, and, on the other hand, the ambition of the better-equipped schools to commence laboratory work as early as possible. The courses for Classes VII and VIII may be worked through entirely in an ordinary class-room; but it is desirable that where facilities exist, even in these classes there should be some individual practical work by pupils. Where there are no facilities for practical work, as many as possible of the experiments, e.g., on length and area, should be performed by pupils at ordinary school desks, the remainder being done at the demonstration table by the teacher, assisted by pupils chosen from the class. In classes IX and X, in addition to class-work and demonstrations, all pupils should receive a regular course of practical instruction in the laboratory.

The subject-matter of the courses has been divided into different topics ; “area,” “volume,” “heat,” “chemistry,” etc., and each class advances its knowledge under each of these heads as far as possible; the main factors which determine the amount which can be attempted in any class are the knowledge of Mathematics possessed by the class, and the skill in experimental work which may be expected from it.

Although the subject has been thus divided into several topics, it does not follow that these should be taught as separate “subjects” in water-tight compartments. In teaching under any particular head the teacher should freely refer to what has been taught under other heads, when by so doing he can bring items of knowledge into close relation. In particular, it is undesirable and unnecessary to draw fine distinctions between Physics and

Chemistry, and there is no need of separate laboratories for these two branches of Elementary Science.

The best laboratory for elementary work is the simplest, and any paraphernalia which tend to obscure the relation of cause and effect should be scrupulously avoided. The Department does not recommend elaborate and expensive fittings; on the contrary, teachers are encouraged to utilize the simplest means by which the subject can be adequately studied.

While great importance should be attached to experimental work, it must not be forgotten that a principle is not thoroughly known unless it can be applied. The teacher should therefore invariably test the pupil's grasp of general principles, laws and formulae, by applying them, wherever possible, to the solution of examples involving calculation.

Thus each pupil in Science will have two note-books: one in which he enters a record of all experiments performed by him, and another in which he writes accounts of demonstration experiments performed by the teacher, and works numerical examples.

Diagrams of apparatus should be sectional elevations, not perspective drawings; these sectional sketches should be neatly and accurately drawn with the various parts approximately proportional in size.

Some uniform plan should be followed in entering the results of experiments; the headings, "object of experiment," "apparatus used," "methods," "results" and "conclusion" are appropriate. Where possible, observations should be entered in tabular form.

Pupils should not rely on single determinations of quantitative results, whenever possible several should be found and the average calculated. The standard of accuracy should be laid down for each experiment, and each pupil should obtain results within the standard or should repeat his experiment until he has obtained a satisfactory result. This standard must vary with the nature of the experiment and the apparatus available, and should be laid down by the teacher himself.

SYLLABUS OF THE COURSES IN SCIENCE.

UPPER MIDDLE SECTION.

CLASSES VII AND VIII.

Class VII.—Measurement of volume by the graduated cylinder and burette. Heat. Expansion of solids, liquids and gases. Construction of a thermometer. The Centigrade thermometer. Chemistry: Definitions; common properties of common substances; solubility; crystallization; mixtures and compounds; physical and chemical change.

NOTE.—A course is given in the Appendix which indicates the minimum amount of practical work required to be performed by students and suggests methods of treatment of the syllabus for the guidance of teachers. It should be understood that teachers may substitute other experiments of equal educational value. Practical work should be co-ordinated with the theoretical work and follow it consecutively as far as possible.

The practical experiment should be performed individually as far as can be arranged.

Class VIII.—Area and volume (continued).

Heat: Fahrenheit and Centigrade thermometers; melting and boiling points, conduction, convection and radiation.

Principle of Archimedes; specific gravity.

Chemistry: common properties of common substances; solubility; crystallization; mixtures and compounds; physical and chemical change.

Books recommended for use of teachers:—

Exercises in Practical Physics, by Gregory and Simmons, Parts I and II (Macmillan and Co.).

Introductory Chemistry for Intermediate Schools, by Jones (Macmillan and Co.).

Physics and Chemistry for Middle Classes of Secondary Schools in India, in Urdu or Hindi, by E. G. Hill and A. H. Mackenzie (Macmillan and Co.).

APPENDIX.

Suggested treatment of the Science syllabus prescribed for Classes VII and VIII.

NOTE.—If there are no facilities for individual practical work by pupils, the experiments marked by an asterisk may be omitted, and the remaining experiments may be done by the teacher at the lecture table with the assistance of pupils.

Subject.	Detailed Syllabus.	List of experiments which should be done by the pupils individually so far as possible
	CLASS VII.	
Volume	The graduated cylinder	1. Use of graduated cylinder to find the volume of large solids and the capacity of large vessels.
	The burette	2. Use of burettes to find the volumes of small solids and the capacities of small vessels.
Heat	Expansion of solids, liquids, and gases by heat.	3. Simple observations with the thermometer, e.g., find the boiling points of water and alcohol.
	Construction of a thermometer. Explanation of a Centigrade thermometer.	
Chemistry	Definitions and common properties	Measurement of relative hardness of different substances.
	Solubility. Influence of temperature on solubility.	To find out which of certain substances are soluble in water, e.g., lime, salt, marble; in alcohol, e.g., wax, salt.
	Crystallisation.	
	Water of crystallisation	From solution. From molten sulphur.
	Mechanical mixtures	Filtration, separation of sand and salt. Separation of iron and sulphur (magnet). Charcoal and nitre by solution and filtration.
	Chemical compounds, physical and chemical change.	Heating salt, sugar, sand, etc., Charcoal and nitre. Iron and sulphur. Iron in solution of copper sulphate.
	CLASS VIII.	
Heat	Comparison of Centigrade and Fahrenheit thermometers: Calculations.	1. Observation with thermometer, e. g., cooling curve for water.
Area	Formula for the area of a circle. Calculations	2. By means of squared paper or by weighing find the ratio of the area of a circle to the area of the square on its radius.
Volume	* Formula for the volume of sphere and cylinder. * Calculations.	3. * By weighing similar cubes, spheres and cylinders, verify the formulae for the volumes of cylinder and sphere. (The experiment may also be done, but less accurately, by the displacement of water.)
Heat	Melting point of ice. Melting point of any solid. Conduction of heat. Comparison of the conducting powers of common solids. Convection of heat. Radiation of heat.	4. Find the melting point of paraffin wax or of naphthalene.
Hydrostatics	Relative density (or specific gravity). Principle of Archimedes. Determination of Relative Density by Archimedes' Principle. Calculations.	Determination by Archimedes' Principle of the Relative Density of (a) bodies which float in water, (b) bodies which sink in water.
Chemistry	Definitions and common properties	Measurement of relative hardness of different substances.
	Solubility. Influence of temperature on solubility.	To find out which of certain substances are soluble in water, e.g., lime, salt, marble; in alcohol, e.g., wax, salt.
	Crystallization; water of crystallization	From solution. From molten sulphur.
	Mechanical mixtures	Filtration. Separation of sand and salt. Separation of iron and sulphur (magnet). Charcoal and nitre, by solution and filtration.
	Chemical compounds. Physical and Chemical change.	Heating salt, sugar, sand, etc. Charcoal and nitre. Iron and sulphur. Iron in solution of copper sulphate.
